

n example of a Newton error would be -48002, which is 'store format is too old to understand'. Ignore the -4, as far as I know it currently has no meaning except to be there. The '80' part of the number is the error type, which would be 'Store Errors'. These are listed in the 'Error Type' section. The '002' is the error number that specifically identifies what the error is. These are listed in the 'Error Number' section. Put the two together and you're on a roll...

Error Type

80
Store Error
82
Object System Error
84
Bad Type Error
88
Interpreter Error

Error Number

2

store format is too old to understand
3

store format is too new to understand
4 store is corrupted, cannot recover
5

single object is corrupted, cannot recover
9

not a soup entry
10

tried to remove a store that was not registered
11

soup index has an unknown type
12

soup index has an unknown key structure
13

soup index does not exist
14

a soup with this name already exists
15

tried to CopyEntries to an unknown soup
16

soup is invalid
17

soup is invalid
18

entry is invalid
19

key does not have the type specified in the index
20

store is in ROM
21

soup already has an index with this path
22

internal error
23

tried to call RemoveIndex on the _uniqueID index
24

query type missing or unknown
25

discovered index inconsistency
200

expected frame, array, or binary object, but got something else
202

empty path
203

invalid segment in path
204

path failed
205

index out of bounds (string or array)
206

source and destination must be different objects
207

long out of range (too large or small)
210
bad arguments
211
string too big
214
object is read-only
215
functionality is unimplemented
400
expected a frame
401
expected an array
402
expected a string
403
expected a pointer
404
expected a number
405
expected a real
406
expected an integer
407
expected a character
408
expected a binary object
409
expected a path expression, symbol or integer
410
expected a symbol
411
expected a symbol
412
expected a fram or an array
413
expected an array or NIL
414
expected a string or NIL
415
expected a binary object or NIL
416
unexpected frame
417
unexpected binary object
418
unexpected immediate
499
unexpected Spanish Inquisition
800
not in a break loop, but presumably called break
802
too many arguments for a CFunction
803
wrong number of arguments

804
FOR loop BY expression has value zero
806
no current exception
807
undefined variable
808
undefined global function
809
undefined method
810
no _proto for inherited send
811
tried to access slot in NIL context
814
local variables and FOR/WITH loops are not

allowed at top level
