

## General Information

PowerReplace can create small stand-alone daughter-application called "SelfReplace", who makes your favorite conversion more easily and efficiently.

### PowerReplace application:

PowerReplace needs the following elements to run:

- (1) PowerReplace application,
- (2) a filter file, and
- (3) the preference file in which PowerReplace saves the last filter file used.

### SelfReplace application:

A SelfReplace application works more simply. It is a self-contained application and has no menu, no dialog box, no option. What you have to do is just to drag and drop text file onto the application icon.

### How to create SelfReplace application?

From the File menu, select Save As... . In the put file dialog box, choose the

button "68K", "PPC", or "FAT" Self Replace.

◇ You can protect your filter by setting password in SelfReplace application. This password will be asked when extracting filter from SelfReplace application.

### **Extracting Filter from SelfReplace application**

To extract filter from SelfReplace application, select Open Filter... from the File menu and choose your SelfReplace application. If the author of the SelfReplace application has set a password, you must enter this password when PowerReplace asks you.

### **Converting Clipboard using SelfReplace Application**

To convert clipboard from SelfReplace application, open SelfReplace application under Finder by double-click. Then click the button "Convert Clipboard".
