

# Troubleshooting

uckus crashes.

Try turning all extensions off.

Unusual extensions are a common cause of unknown crashes.

Try adding extensions a few at a time until the culprit is known.

Please e-mail [zaphara@aol.com](mailto:zaphara@aol.com) if you discover an extension conflict.

Ruckus does not play smoothly.

Make sure no other applications are running.

Try turning all extensions off.

An extension may be slowing Ruckus down.

Ruckus is a heavy load on your CPU. Your computer may be too

slow to run Ruckus.

Tracks don't appear in the load menu.

Make sure the proper file has been opened.

When Ruckus is started, the default file "Tracks" is always

opened first.

Errors occur when tracks are saved or played.

Make sure all track pieces lock together smoothly from start to finish. You may have to adjust the track slightly so that the final segments connect smoothly to the first segment.

**NOTE:** Bonus levels do not require continuous tracks, but you may

want to lay out some track anyway to give the level a sense

of structure.

Make sure each track has a valid track name for Next Track. To set Next Track, select Edit Data in the Track Menu. If the track is the last track in a series, check the box "Last Track" after selecting Edit Data.
