Documentation for SSBLIND.SCR
(c) Paul Gyugyi, 1992

SSBLIND.SCR is a screen saver that works with the one built into Windows 3.1 or Multimedia
Windows. Just put the file SSBLIND.SCR in your Windows 3.1 directory, and use the Control
Panel Desktop to configure and test it.

When activated, ssblind will drop a protective curtain over each of the windows on the screen,
and will (optionally) play the "Critical Stop" .wav file when each one closes. It's recommended to
have a short .wav file that sounds like a window closing.

SSBLIND.SCR is based upon the programs written by Charles Petzold which appeared in the
June 1992 Windows Tech Journal (maybe the best windows programming magazine I've found).
The files were compiled with Microsoft Quick C and a few libraries from the Multimedia SDK.
Source code is included for you Win3.1 SDK people out there who wish to change the color of the
blinds or whatever. The makefile is in QuickC format.

SSBLIND.SCR is freeware. Please do not, however, distribute any changes to the code, but
rather send them to me and I would be happy to fold them into a new version. Some areas for
new features would be: choose the pattern for the blinds, probably using the background
patterns people use for the desktop; customizing the .wav file played when the windows close
(currently it plays the "Critical Stop" sound); and maybe better animation (like a hand reaching up
and pulling a cord down to close the blind).
