

Bye Bye V1.0

Yes, this is th 187th Exit/Restart/Reboot Utility you have seen. It has nothin more to offer and nothing less. I just wrote it to get some experience with the new Borland Delphi !

Very nice !!

Just notice the Windows 4 Buttons on the dialog. Be sure you have CTL3D somewhere around in your path.

If you like it, just use it and send me a postcard or an e-mail. It is distributed as Freeware.
