Disclaimer

Simply copy the NSAFileGen exe to your C: directory :)

Start NSAFileGen from the CLI/Shell ONLY!

Use:-

C:NSAFileGen MyConfig

Where MyConfig is the full pathname of your config file...

The config file has the following format:-

Line 1: The output file name eg. BBS:MyFilelist.Text  
Line 2: Format of the document, can be ASCII or GUIDE  
Line 3: FORCE DIZ File\_id mode, for ex Spin Diz users. Keep at NORMAL.  
Line 4: Low Access level. If a file section has a minimum access of  
lower than this value, it won't be included in the list. Defaults  
to 0.  
Line 5: High Access level. if a file section has a minimum access higher  
than this value then it's not included. Defaults to 20  
Line 6: Text Header File. This points to an ASCII file with what you  
want contained at the start of the filelist...  
Usually a good idea to have a BBS advert :)  
Defaults to BBS:Text/FileListHeader.text tho it's not necessary  
to have one :)  
Line 7: Section to skip, Usually the SysOps file section... Defaults to 0

e.g.

```
BBS:BBSFileList.Ascii
ASCII
NORMAL
0
20
BBS:Text/FileListHeader.text
23
```

FORCE DIZ explained :)

-----  
This is purely an option for ex-Spin Diz users who swapped to Magic File  
or another max's filebase that doesn't support file\_id's...

You still need to have Spin Diz installed and assigned!!!

What it does when switched on it checks Spin:Diz/ for a file\_id for that  
file. if it does find one then it'll use that instead of the normal  
max's file description :)))

If you are currently using Spin Diz and are getting confused by this <G>  
Then leave it set to NORMAL!!!!

The generator automatically detects spin-diz file comments.. This option is  
only for ex-spin sysops...

---

That's bout it...

It pops up a window when started saying how well its doing and how long its taken to compute the filebase...

## 1.6 Distribution

This program & related doc files are copyright!

Do what you want with it tho :)

Spread it around the world a few times :)

---

## 1.7 Disclaimer

Usual stuff applies, u use it at your own risk etc. etc.

Just don't blame me if it shags up your firebase, gets your wife pregnant, runs the dog over, turns the moon blue etc...

It is very safe tho :)

---
