1.2   Introduction to this PowerDOOR

-=-

Introduction - What is it?

-=-

Power Access is a Door which allows each level of user (1-10000) have

a different Bulletin and Main Door Script. This allows the Sysops and

Co-Sysops to have a Quick Login whereas normal users have a long

delay with many doors such as questionnaires.

-=-

What does this Door offer?

-=-

This door offers different access scripts for every single Access

available from 1 to 10000. It will even support more if Niki Murkett

decides to revamp the Access system on MAXsBBS Professional.

1.3   Installing PowerDOORS

-=-

Installation of this PowerDOOR...

-=-

All PowerDOORS are installed in the same way. Simply, make sure that

there is a directory in your Doors directory or assignment called

`POWER'. This is where all PowerDOORS are stored. If you do not have

your DOORS directory assigned, then you should add an Assign to your

Startup-Sequence or User-Startup File.

C:Assign >NIL: DOORS: BBS:Doors/

^^^^^^^^^^

Change this to your Doors directory path

Now, Create a directory inside the `DOORS:Power/' Directory with

the name of the Door. This is the word to the right of the `Power'

in the Archive filename. So, For example, if the PowerDOOR was called

PowerACCESS, then you would create a directory in the `DOORS:Power/'

directory called `ACCESS'.

Now, Locate the Archive you downloaded or received. It will probably

be in the `LhA' or `LZX' form. Simply use a version of `LhA' or `LZX'

to Extract the files into the desired path.

C:LhA x PowerACCESS_??.LHA DOORS:Power/????/ \ Where `????' is the

} Name of the PowerDOOR

C:LZX x PowerACCESS_??.LZX DOORS:Power/????/ / For example, `ACCESS'

Now, all the files including some File Descriptions `File_ID.DIZ' and

some Configuration files `Access.CFG'. Other files will also be

included which are not Doors such as those that have the File

Extension of `.Text'. These files are ANSIs. If you find a file with

an extension of `DAT', then do not try and edit these.

Now, Simply add the following line to your `DOORS:IntroDoor.Text'

File...

Power/Access/Access

Now, Simply create a Directory in your `Doors' path or assignment

called `Scripts', and in this directory, you can create as many

different Access files called `MainDoor.Text.?' and

`BulletinDoor.Text.?' where the `?' Question Mark can be anything

from 1 `MainDoor.Text.1' to 10000 `MainDoor.Text.10000'.

1.4   Configuring PowerDOORS

-=-

Configuration of PowerDOORS

-=-

As of this version, There is no Configuration File needed for

Power Access. Simply create scripts in the `DOORS:Scripts/' directory

that you created during installation and create the actual Access

Door scripts in there...

Call the scripts... `MainDoor.Text.?' and `BulletinDoor.Text.?'

where `?' can be from 1 to 10000...

[0] Return to the Main Menu

1.5   Using the PowerDOOR

-=-

Using the PowerDOOR...

-=-

When the Door is loaded during Logon, An ANSI Screen will appear

saying that the BBS Logon Process is being configured for the

relevant access. The User's access level will be represented by a

Figure in the Access text box and by a small Graph representing

your access against the highest access (10000).

When the Process is complete, the Door will exit automatically

allowing the normal BBS Logon process to continue...
