Stefan Stuntz -> For Magic User Interface (MUI)

### 1.3 How to install this Program

Just place it where ever you like and start it. First, MpegA-Gui asks for the Program MpegA and after that for the Path. Then go to the PullDownMenu and select Preferences to switch some important or unimportant things on or off btw. change the Volume etc...

When you quit the Program, MpegA-Gui saves all Settings automaticly incl. the last used Position of the Window. If you have some Reports or suggestions for it, please let me know it. Do you have fun to translate some Catalogs or this damn DocFile to your own Language, please do it! Well, of course you can (it would be very kind from you) when you place it into AmiNet.
