1.3   Introduction

MiraNAVIGATOR simply build an index of your LHA,
LZX, DMS and ZIP files for view (or just extract)
them simply, organizing in AmigaGUIDE file.
Once indicate a directory (or a device),
MiraNAVIGATOR search in all the sub-directory and
find all LHA, LZX and DMS files; after will be
created an AmigaGUIDE file (viewable with
Multiview) that has the same structure of
indicated directory and containing also all the
LHA, LZX and DMS file ready to be extracted or
simply viewed by clicking the left mouse button on
the name of the archive.

1.4   how does it work ?

At the moment of the execution MiraNAVIGATOR shows
a very simple user-interface.
The gadget "Directory" show what is the path for
the quest, you may choose a directory or a device
ending with ":".
It is better to use the name of the volume instead that
the name of the device:

     Ex.   Use "AmiNET:" and not "CD0:"
           Use "Work:" and not "DH1:"

In the gadget "File", you must indicate the name
of the AmigaGUIDE file that you want to be created.
If possible use "ram:" for the creation of the archive,
that will result faster (for the frequent access).
Once that the file is created, if you click on its
name it will decrunced in the path indicated in
the gadget "Extract path".
If, instead, you want that the file will be
decrunced where do you want every time, you must

```
simply activate the flag "Use Extractor".
Use the gadget "Create" to make the archive.
```

1.5 Installation

```
             MiraNAVIGATOR needs:

1 - MUI 3.0 (or above)

2 - The comand "MultiView" must be placed in the
    path "SYS:Utilities/MultiView".

3 - The programs "Extractor","List" and "Sort"
    in "C:" or another search path.
```
