Notes of BOUCHON Guillaume

Important ! Messages for people who have BOMBER GUG

Small present...

How to install Post It ?

What is Post-It ?

What are the requirements ?

How does it work ?

The interface of Post-It...

How to edit the messages ?

You have problems ?

1.2 How to install Post It on your Hard Disk ?

Double-click on the icon of Install.english and follow the instructions on the screen. It's all !! Simply ! no ?

Return to the menu

1.3 What's Post-It ?

Post-It is a small program but a very useful one. Post It can appear messages on the Workbench's screen when a date is reached. So it can be very useful when you have to remember to do something one day. Post-It is a sort of mini organiser.

Return to the menu

1.4 What are the requirements of Post-It v2.1 ?

This is the list of the requirements :

- An Amiga of course ! (I don't know if Post-It works on all Amigas)
- The Workbench (I think at least the Workbench 2.0)
- Some memory (I don't know how many but I think it's in the fifties kb...)
- Some spaces on the drawers S: and C:
- A clock (present on the accelerator cards)
- The program Ed in C: (Ed is giving with the Workbench)
- The font Oil-Imp with a height of 12 in the drawer FONTS:

Caution ! If you don't have a thing of the requirements' list, in most cases, the Amiga will crash !

Post-It has been only tested on an Amiga 1200 with the Workbench 3.0 in 704 x 536 x 4, with a card Mtec 68030 28 Mhz 8 Mb of Fast ram, a Cd-Rom x4, an Hard Disk of 700 Mb :
Post-It works fine !

1.7 Notes of the autor...

* I am sorry of all my english errors.It's not my fault,I am ↔
 not good in English
 because I'm French
 * Post-It was made in few hours in Blitz Basic 2.1
 * Post-it is my 2nd program which I put on Internet in Aminet.
 * Post-it is not a shareware but a freeware which is very rare today because
 everybody want money...
 * Some publicity...

Get it :

```

*****      *****  **   **   *****      *****  ****
      *   *   *   *   *   *   *   *   *   *   *   *   *
      ****   *   *   *   *   *   *   *   *   *   *   *
      *   *   *   *   *   *   *   *   *   *   *   *
*****      *****  *   *   *   *****      *****  *   *
                                                                 GUG

```

A superb clone of Bomber Man only on Amiga.
 Available on Internet in Aminet.

Amiga 500 at 4000 - 1 mb

GUGU BEST SOFTWARE -* Copyright 1998 *-

* Fuck Billou and Intel Outside !!!
 * I want to congratulate the France's soccer team because they're the best of ←
 the
 World !!!Vive la france !!

Return to the menu

1.8 How to use this fucking program ?!!!

We can use Post-It by 2 way : by the Cli (or by Shell) or by ←
 the Workbench

--> By the Workbench <--

Double-click on the icon of Post-It to run it.If all is ok, a window call
 "Post It It v2.1 * Gugu Best *" will appear on the Workbench's screen : you' ←
 re
 in Post-It

--> By the Cli <--

Here there is the synopsis for the Cli : Post-It <option>
 or Post-It <day> <month> <year>
 or simply Post-It

In the first case, <option> can be "close"

example: Post-It close

The "close" option close Post-It when there aren't messages for the ←
 current
 date.

In this version, there is only 1 option but maybe the future versions ←
 will
 have more...

In the 2nd case, Post-It display the message of the date <day>/<month>/< ←
 year>

example: Post-It 10 09 1998

This example display the message for the date 10/09/1998.

Note: 1998 can be write 98

<day> <month> and <year> must be numbers.

In the last case, Post-It is run without any options.

Return to the menu

1.9 The interface of Post-It...

The interface of Post-it is very easy, there are two parts : ↔
 the actions' part which
 it is on the top of the Post-it's window and the messages' part which it is on the ↔
 bottom of
 the window.

* The actions' part

There are 4 gadgets : edit,delete,view day and quit.

Click on :

- "Edit" to
 edit the messages
 with Ed.
- "Delete" to kill the current message.
- "View day" to select a day.
- "Quit" to quit Pos-It.Note: you can also type ESC key.

* The messages' part...

First,there is the date : example : date 01/09/98 and after,there is the
 message (when there is one) for this date.

Return to the menu

1.10 How to edit the messages...

The messages are in a ASCII text file.The path of this file is ↔
 : S:post_it.data

If you have used the gadget "Edit" of the interface of Post-It,Ed will be already ↔
 in
 this file.

To write messages, you must type in this file :

```
* <day>/<month>/<year>
  <message>.....
  .....
  .....>
```

Change <day> <month> and <year> by the date which do you want your <message> ↔
 to be
 display on.

NOTE: <message> can't be superior at 10 lines !!!!!

If you don't understand,see this example :

```
* 01/09/98
Hello the world !!!
Cool ! no ?
* 24/12/98
Happy Christsmas !!
* 01/01/99
Good year !!
```

etc...It's all ! I hope you understood how to write a message.

Return to the menu

1.11 Have you got a problem ?

Here there are the problems what you can have :

- 1- Post-It doesn't appear his window when it's run.
 - Verify if you have run Post-It on an Amiga and not on Pc or Mac.
 - If you have run it by the Cli,are you sure what you don't have put the "close" option ?(for more informations,click here
 - Are you sure you have all the requirements ?
- 2- The Amiga crashes after you run Post-It.
 - Verify if you have all the requirements .
 - You can have an incompactible Amiga or the Workbench is incompactible ↔ with Post-It,
In this case,say it to me by mail .
 - Rerun Post-It to see if it works.
- 3- The Amiga explode after you run Post-It.
 - Fuck your dealer !!
 - It's not the fault of Post-It.
- 4- I don't have the problems mentioned.
 - Verify if you have problems.
 - If you have one, contact me

Return to the menu

1.12 Message très important pour Bomber Gug...

Here there is a message of the autor of Bomber Gug and Post-It ↔
:

After a very very small sucess of Bomber Gug, I decided to stop Bomber Gug. But ↔
if you want
to see one day a new version of Bomber Gug, send me letters and maybe I will ↔
continue

Bomber Gug.This is my address : BOUCHON Guillaume
 2 Rue des fleurs
 30150 MONTFAUCON
 FRANCE

NOTE for the people who want to command the final version : DON'T COMMAND IT !!!

If you have Bomber Gug Shareware, continue to distribut it all around you and ↔
why
not with Post-It v2.1.

Return to the menu

1.13 Small present....

I offert to you the source code of POST-IT v2.1 for Blitz ↔
Basic 2.1 !!!!!!!
The source code is in the path Cadeau/.
You can modify the source and you can do a new version of Post-It without any
permissions from me !!
