1.3 Fucking Fast Login v1.4 by Glen Martin of GREMLINS BBS

Fucking Fast Login (aka: FFL) is another great MAXs door that allows the Almighty SysOp and selected Users (via "FFL.users" listing) to bypass all the doors executed during the "Intro/Maindoor.text" login sequence. The mail checking is not skipped.

Fucking (.. Oops, that bad word again) Fast Login simply makes logging in much quicker and is great for the SysOp when he(she) logs onto the BBS.

FFL 1.4 is a tiny update from v1.2 ('97). Don't like it, don't use it!:)

1.4 Fucking Fast Login v1.4 by Glen Martin of GREMLiNS BBS

Firstly (if you already haven't) create a new directory called "gremlins" in your doors directory. Assign "gremlins" to your doors path in the user startup sequence, eg: "assign gremlins: doors:gremlins" assuming you have the doors path assigned also, you crazy SysOp.

Move the "FFL" directory into the "gremlins" dir and run the door (FFL) via the "Introdoor.text" (see example) sequence, as your very first door. Run the second door (FFL_2) as the last door in your "Maindoor.text" (see example).

Create a directory called "intro" in the doors dir. This dir (intro) is renamed to "intro_ffl" when FFL is first run and renamed back when FFL_2 is run. All doors (the executables only) are placed in this "intro" dir, as well as remaining in their normal dir's or paths, if you need 'em.

For each door run via "Intro/Maindoor.text" you must alter it's path and have each door (the executable) run from the new path if you want FFL to skip them. See "Intro/Maindoor.text" for self explanation.

Example: intro/wall

In brief, when FFL is run, it renames the dir to "intro_ffl" and each of the doors are not located because the path name has changed, thus each of the doors in "intro" path are skipped. ..Understand? ;)

For FFL axs to Users, place thier name in the "FFL.users" file (see eg.). The "FFL.menu" can be altered if you desire, but why bother, it's cool?!

Last thing, place the following lines in your logoff script as this will ensure that if the "intro" dir has been renamed to "intro_ffl", that it is indeed changed back (incase FFL_2 missed it?):

if exists doors:intro_ffl
rename doors:intro_ffl doors:intro
endif

And that should be about it, hopefully..!? ;-)

Need help, further info or something, then contact me.

1.8 Fucking Fast Login v1.4 by Glen Martin of GREMLINS BBS

\textdegree{}\textdegree{}

It all started when my mate gave me a box, a slow 2400 modem in 1994. I plugged it into my computer and this was my first experience with the modem and BBS world. I soon logged onto a few BBS's, and got to know how it all worked. One SysOp showed me his BBS and explained it all to me in more detail. I became involved, and wanted my own BBS.

Late 1994 or so, I started my own small BBS using MAXs BBS 1.54 and this was my first encounter with MAXs. I then moved around and the BBS went with me. I then thought about programming and another SysOp got me started and helped me out. Before I knew it, I was programming a heap of doors for the great MAXs BBS, first door evolving in 1995 and many more doors created since then, right up till now. I still program today!

I'm dedicated to MAXs and everything I create is dedicated to MAXs BBS and every MAXs SysOp (..and Fluffy Net). If anybody wants to start a BBS using MAXs, as I have helped many SysOp's before or need help (anything), then contact me and I'll be more than happy to assist you in anyway. And if you don't like it, then don't use it.

Hello and thanks to all those around the world who have emailed me! As long as Gremlins BBS is still online, I'll still be around for a while?!

Regards,
