db 2.3 Database with GadTool look

db is a small and fast database program that I wrote after having tested numerous other PD database programs and always found something lacking or irritating me. They might have dozens of features not found in db, but they lacked font sensitivity and a standard GUI look and OS 3.0 behaviour.

My main need was to keep record on addresses and telephone numbers of friends and companies. Before this release db was fixed to be just an address and telephone database, but this has changed now. The program is designed to handle information of your choice. Currently you have to use a file editor to specify the database fields and layout as there is no GUI for that. Anyway that's a one time job, then you just USE the database and have fun.

Complete GUI support will probably only be included in a commercial product I plan to call REG.

A partial list of db's features include:

- o Dynamic memory handling. Number of records and fields only limited by free memory.
 - o GadTool based, gives a standard look and feel.
 - o Mouse and keyboard driven.
 - o User definable fields and layout.
 - o Multiple views of the same database.
 - o Commodore's Clipboard for flexible interaction with other programs.
 - o AppWindow -just drag and drop database icons on db to load.
 - o Online MenuHelp -Press HELP key when selecting a menu item.
 - o Font sensitivity.
 - o ARexx
 - o ASL requesters for flexible loads and saves.
 - o Localized
 - o Dial numbers using a modem
 - o WB and Shell usage with Commodore's template parsing
 - o Fast and flexible find function using AmigaDOS patterns.
-

- o Filter function.
- o Fast and flexible sort function. Multiple sort orders can be specified.
- o 'Export View' and two standard ASCII export features.
- o Automatic ASCII import (tab-separated ASCII)

DFA 2.2 Address database with many features

DESCRIPTION

DFA is the ultimate address tool for you and the Amiga computer. DFA supports email addresses, dialing of phone numbers, grouping of addresses, different types of printing addresses, online help, application icon/window and much more!

DFA has an Arexx port, font sensitive windows and can be fully directed by keyboard. Native languages are supported as soon as Workbench 2.1 (and above) is installed.

Nearly every aspect of DFA is customizable now, so you may configure "your own" DFA.

This is version 2.2, a minor upgrade to version 2.1.

DFA is an SASG product! Shareware, binary only.

NEW FEATURES

New window for more convenient and faster group editing.

Clipboard support.

Visual feedback for all button gadgets.

Speed optimizations for the address listview.
Should be up to 10 times faster now!

Even faster address file loading.

Larger buffers for all address string gadgets.

New Arexx command 'GUI' and 'OpenEditWindow'

Size optimization of the dfa.library. About 15K saved!

Sort function is 'locale sensitive' now.

Improved locale handling.

Additional and improved status messages.

Improved status text gadget (DFAEditor) now supports centered propotional text on all Amiga-OS versions.

Improved Installer script, which now supplies a new uninstall mechanism and german texts (optional).

Several bug fixes.

=====

IntuiDex 1.1 Mailing list manager

Easy to use club membership database and mailing list manager.

Features:

- 1000 records per database
- Sort by six different fields:
 last name, first name, ZIP,
 member number, city, and
 expiration date
- Print five different types of output:
 mailing labels, complete data list,
 phone lists, game stickers, and
 merge files for word processors
- Uses Preferences printers
- Dials phone automatically with Hayes compatible modems
- On-line AmigaGuide help
- Most data field names are configurable
- Data is stored in ASCII files- export and import data from other
 database software!

TurboCalc 2.18E Demo version of powerful spreadsheet

A spreadsheet which was chosen as "spreadsheet of the year" for Amiga computers by the readers of one of Germany's most important Amiga magazines. This is a demo version with disabled save and print functions. Has more than 100 functions and 120 macro commands, include ARexx commands. Has an integrated database with search, sort, copy, extract, delete, and other database functions such as number of

matches, average, etc. Diagrams and charts are included and very easy to handle.

Nuclear Warfare 1.25 shareware game of strategy

World tensions mount! Everyone is stockpiling weapons and trying to influence allies to side with them! Someone cracks and pushes the big red button! Nuclear Warfare is a game of economics and strategy in the early stages where you attempt to build up your country and it's defenses. Spend too much on defenses and you grow less than your enemies, too little too late and your toast! Nuclear Warfare is a BBS door game for up to 15 players. Each player controls a major country and attempts to influence non-player countries into attacking enemies. The games always have 15 players, any slots empty at the start of the game are used by computer players. When a human player wants to play, they take over from a computer player. This game can be played from cli with just one player and it will be you against the computer. It is primarily setup to be a BBS door game for any BBS that supports STDIO type doors such as Citadel, DLG, and several other popular BBS programs.

=====

Term 4.1 Very nice terminal program.

A telecommunications program designed for use with any Commodore-Amiga computer running Kickstart 2.04 or higher. Its features include:

- * Fast built-in VT-220 terminal emulation
 - * Support for custom terminal emulation modules following the 'XEM 2.0' standard
 - * Operates in any display environment, supports all screen display modes
 - * Support for file transfer modules following the 'XPR' standard
 - * File- and printer-capturing functions
 - * Review-buffer support
 - * Powerful phone book and dialing functions
 - * 'Amiga User Interface Style Guide' conformant user interface
 - * Online-help (requires AmigaGuide package)
-

- * Built-in 'ARexx' interface
- * File upload list, which permits selecting the files to be transferred before the upload is started.
- * Login script learn mode.
- * Built-in keyword/response parser which makes it possible to have 'term' respond to BBS prompts and such with the user name, password, etc. without having to program the ARexx interface.
- * Interface for external programs to rendezvous with 'term', taking over serial I/O processing (such as 'HydraCom').

=====

VisualArts 2.0 A powerful GUI designer

Visual Arts 2.0 is a new powerful GUI designer. Features includes: Menu and List manager, Object Master, Insert custom codes into any GadTools or GadTool Menu items, primitive drawing tools such as rectangle, circle and lines; Supports AppWindow and MultiProcessing windows. Add AREXX to any program, custom images, custom images for button, PopupMenu, get any IFF color map and use it in your program, color palette and over 40 custom patterns for fills. V2.0 now supports Context Sensitive.

An intuitive interface unlike other GUIs, unlimited windows can be opened, supports PAL, NTSC, EURO, VGA, AGA screen modes, user preference, automatic history and time interval saving, user configurable source output, and many more features.

AmiCDROM 1.13 ISO-9660 standard CDROM filesystem

AmiCDROM is a CDROM disk filing system for the Commodore Amiga. It supports the ISO-9660 standard, the Rock Ridge Interchange Protocol and the Macintosh HFS format.

The CDROM drive is mounted as a DOS device (e.g. CD0:). You can access files and directories on a CDROM disk by the usual syntax, e.g. "type cd0:foo/readme.txt".

Night Math Attack ?..? Educational math game

Want a game for the kids that's educational and constructive? Tired of them blasting aliens? Night Math Attack is a motivational game for practicing all 4 math operations (addition, subtraction, multiplication, and division), created with help from an educational consultant. Faster speed and accuracy at these skills result in better problem-solving math ability and higher test scores. The program has up-beat music, quality graphics, and no requirement for fast hand control. Following the title screen and instructions, the player chooses which math operation to practice. The game screen has a question at the top, 4 answers down the left side, a helicopter in the middle, and a choice of sound on/off at the bottom. The player uses the joystick or cursor keys to fly the chopper up or down so it is level with the correct answer, and then uses the joystick or space bar to fire a missile at the answer. A message then reports whether the choice was right or wrong. The wrong messages are followed by the question with the correct answer to reinforce learning. Wrong choices are generated randomly so that students will not become used to the same choices after repeated plays. After 20 questions a "report card" gives the accuracy rate. There is a print-out option which prints wrong questions and out-of-time questions for further study, which requires the printer driver to be in the devs directory of the boot disk. Practicing math facts as little as 5 minutes a day usually results in a grade score improvement.

=====

UUxT 3.0b CLI/GUI-based UUEncoder/UUDecoder

UUxT is a full featured UUencode/decoder with the following features:

- o File splitting when encoding for easy mailing/posting.

- o Batch decoding. (You can decode many files at once, as well as split files without joining them. UUxT also has wildcard support.)
- o Batch encoding. You can encode multiple files into one text file.
- o Automatically skips over mail headers and other junk that can end up in encoded files.
- o Ability to LhA compress files for you, and then uuencode the resulting compressed file, all in one step, thus saving you time. You can also decode and de-LhA in one step.

UUxT also comes with UUxT-GUI 2.0, a full featured workbench interface for UUxT. UUxT-GUI 2.0 now supports all of UUxT 3.0's features including batch encoding, decoding, etc.

PicBoot 2.3 Displays picture during bootup

Have you removed all output in your 2.0+ startup, and only see a black screen during boot? Wouldn't it be nice to have a picture instead? A picture that disappeared when the Workbench screen opened?

If so, PicBoot is certainly a program for you. What it will do is to read any IFF file containing an ILBM picture - or a GIF file - and show that picture. As soon as the Workbench screen appears (or you press any mouse-button), the picture will go away.

Author: Magnus Holmgren

=====

CX 1.1 replacement of the "Exchange" program

CX is a replacement of the original "Exchange" program from the Workbench. I wrote it, because I need a program with the ability of removing all commodities in the system. And I always wanted to write a commodity.

One of my goals was to be compatible in the using to the original program, but also offer new methods of executing actions. You can select all buttons and gadgets by pressing a key on your keyboard, use the cursor keys to move around in the list of commodities and other things.

I hope, that this version is mostly bug free.

RO 0.81 A MUI-Based FileManager

RO is a new Intuition-controlled, fully user-configurable file manager for OS 2.04 and newer. RO's mighty features will assist and help you on your daily work with your Amiga. With RO there is no need to learn those

cryptic shell commands, because you have the complete power of your Amiga in one hand.

Due to the usage of MUI you are able to configure the look and feel of this tool as you like it. MUI is the Magic User Interface developed by Stefan Stuntz which should be installed on every Amiga. It is an object oriented system to create and maintain graphical user interfaces. Users of MUI based applications have the ability to customize nearly every pixel of a programs interface according to their personal taste.

GED 1.1 programmer's editor

GoldED is a text editor for programmers. Suggested hardware: OS3.1, 68030, 2MB RAM, HD. Features: fast scrolling, folding, project management, DICE-C compiler frontend, ARexx port (380+ commands), asynchronous printing, flexible GUI: any mode, any font, user defined menus, user-defined gadgets, preview mode, keymap editor. OS3.1 support (AppWindows, MenuHelp, HotKey), localized, ASCII character selection table, character set remap (e.g MS-DOS to Amiga), APC (automatic phrase completion), AutoCase (automatic case correction), smart indention after user-defined keywords, QuickFunc scanner (displays a table of all functions defined in your source code; language-independant), includes & AutoDocs reference function, file hunter, global search across file boundaries, macro recording, formatter, QuickStarter, AutoBackup facility, XPK-support, clipboard support, online spell checker, icon dock based on Stefan Becker's ToolManager. Additional tools: PCL (Laser/DeskJet) printing utility HiSpeed, Recover (recovers text buffers after reboot), compiler frontend GUIMake and more. English, German & French documentation provided as AmigaGuide files. v1.0, commercial demo, binary only. Authors: Dietmar Eilert (GoldED), Rico Krasowski (GUIMake) and others.

=====

IFFMaster 1.3 Show IFF structure & chunk contents

IFF Master is a program that allows you to have a view inside the structure of IFF files. It is not yet another picture viewer or sound sample player, but it displays the internal entities (chunks) of a file. For example, the headers of pictures (ILBM) or sound samples (8SVX) are displayed in clear, so you can directly read the size and depth of the image or the sampling rate.

Current features (V 1.3) include:

- MUI application
- localized GUI (with AmigaOS 2.1 or later)
- Extensive chunk type library (currently 37 form types, 234 known chunks, 60 of these with comprehensive structure description)
- Chunk contents are presented alternatively as structure, text or hexdump

- Bit fields and enumeration types are displayed in clear
- Fixed point values are printed in decimal (e.g. 8SVX.VHDR.Volume)
- Callback hooks for special attributes, e.g. the Mode-ID inside the CAMG chunk is de-referenced (e.g. "PAL: Hires").
- clipboard support
- chunk contents and partial FORMs can be saved
- AppWindow and AppIcon

Features new for V 1.3:

BUG prefs window: close gadget now functioning
 BUG Cycle chain (TAB) now works in all windows
 NEW new chunk types: IAND, IANM, DR2D, RGB8, RGBN, SPLT
 NEW hex numbers get a user-chosen indicator, construction of hex dumps is now more than 3 times faster
 NEW IFFs can be saved, even nested FORMs, e.g. images inside animations
 NEW Implemented some editing capabilities (delete chunks)
 NEW Preferences can be saved

Author: Kay Drangmeister
 Path: util/misc/IFFMaster14.lha Readme

=====

PPrefs 2.0 Screenmode promotion utility

PPrefs is a screenmode promotion utility which allows you to promote every available screenmode of your system (including HAM and EHB modes) to another mode. You simply select a source and a destination mode and every program that wants to open a screen with the source mode, instead will open a screen with the destination mode. If you want that some very special programs get their very special screenmode or don't get promoted at all, besides that "mode to mode" promotion, PPrefs supports task/screen specific promotion, as well..address

Author: Olaf Gschweng
 Path: util/boot/PPrefs202.lha Readme

=====

VMM 2.1 Virtual memory for Amigas w/68030/68040

VMM implements a virtual memory manager for Amigas with a 68040 or 68030 processor. A nice GUI to enter all parameters and to disable certain tasks and load files from using virtual memory is also provided.

V2.1 fixes various bugs in V2.0a. It also includes a write buffer for pages going out to disk, making VMM a lot faster. Paging to a file has also been speeded up significantly.

Author: Martin Apel
 Path: util/misc/VMM_V3_2.lha Readme

=====

Scout 1.3 Tool to monitor computer system.

A tool that allows you to monitor your computer system. It displays many different things - like tasks, ports, assigns, expansion boards, resident commands, interrupts, etc. - and you can perform some certain actions on them.

For example you can freeze tasks, close windows and screens, release semaphores or remove locks, ports and interrupts.

An implemented ARexx interface makes you these actions available, too.

Author: Andreas Gelhausen

Path: util/moni/scout24.lha Readme

=====

SnoopDos 3.0 System and application monitor

SnoopDos

SnoopDos is a utility that allows you to monitor a variety of system operations carried out by programs on your Amiga. This includes what files a program is trying to open, what fonts, libraries, devices and environment variables it is looking for, and so on.

This is very useful if you are trying to figure out why a certain application won't work properly. Usually, it's because the application can't find a certain configuration file, library or device.

This version has many new features not present in version 1.7. Among the most important are a full GUI, support for many new functions, support for monitoring programs compiled with GNU C, and a packet debugger for programmers.

Author: Eddy Carroll

Path: util/moni/SnoopDos30grm.lha Readme
