

Strip Poker for Windows v2.20

Copyright © Haynes Software 1992-1996.

November 24, 1996

Thank you for evaluating this demonstration version of Strip Poker for Windows and supporting the Shareware concept of software distribution. If you find that you would like to purchase a REGISTERED copy of any of the available opponents, please fill out and send in the order form contained in the file ORDER.WRI or the one accessible in Strip Poker Help. If either of these sources are unavailable, you can receive an order form by contacting me via CompuServe at 72230,306, the internet at 72230.306@compuserve.com, or by mail at the following address:

**Haynes Software
2545 Eastbluff Dr.

Newport Beach, CA 92660 USA**

Strip Poker for Windows runs on an IBM PC or compatible with a SVGA monitor in 640x480x256 resolution under Microsoft Windows 3.1 (16-bit) or Microsoft Windows 95 (32-bit). This particular demonstration package is for Windows 3.1 systems.

If you would like a demonstration package for Windows 95, download STRIP9.EXE from the Card Games library in the GAMERS forum on CompuServe, or you can find a copy on my WWW home page. My URL is <http://www.harborside.com/home/b/bhaynes>. Note that both programs look exactly alike as you are playing the game. The only difference is that the Windows 95 version takes advantage of the 32-bit operating system.

Installation

To install Strip Poker for Windows:

From the Microsoft Windows Program Manager, choose Run from the File menu and type:

c:\work\setup

Note: In both cases, replace **c:\work** with the path that you were in when you ran STRIP3 or STRIP9.

Once the installation is complete, you can delete the files in the **c:\work** directory.

To keep the size of this demonstration package as small as possible, I have only included one opponent file. You can view all of the available opponents with the Microsoft Paint program and the BMP files provided.

You may freely distribute the files in this demonstration to your friends and BBS systems but please distribute the program STRIP3.EXE or STRIP9.EXE found on CompuServe or my home page. And thanks again for the time you have spent with my program.

Laissez-faire!!
