

### **1956 Corvette SS (Super Sport)**

This complex multi-tubular space framed creation of Zora Arkus-Duntov sported deDeon air suspension and a hopped-up, fuel injected 283ci small block V8 putting out 307 horse power at 6400 rpm. Much of the body and chassis components were made of lightweight magnesium. A bubble canopy was designed for the SS for use in long-distance events.
