

Welcome to LightBox™ version 1.01

LightBox is a powerful tool for sorting, previewing, decompressing and viewing of high resolution images. This tool will make accessing PhotoDisc images fast, easy and fun.

We have used the analogy of a real-world LightBox to make your Macintosh computer the most powerful image viewing tool available. You can browse for images, search for photos by keywords or run a slide show of photos you select.

This is a limited version of LightBox. It will not allow you to build new catalogs or alter our existing data. A full-featured version of LightBox will be released shortly ,if you are interested please call;
21st Century Media
