### **Wildcat! Interactive Net Server**

The Wildcat! Interactive Net Server product line provides a Windows NT/95-based solution by offering the capabilities of a Web server, an FTP Server, a Message Server, a Commerce Server, a Dial-up Server and Intranet Server.

The Wildcat! Interactive Net Server is available in four configurations. The Enterprise Edition (MSRP \$3,995), Business Edition (MSRP \$1,495), Community Edition (MSRP \$249) and the Personal Edition (MSRP \$5-\$10). All Editions share a standard base feature set.

The Wildcat! Net Server product allows an individual or business to create a Web or Intranet site that is fully accessible by Netscape Navigator or Internet Explorer. Through a combination of dynamic HTML screens and Windows client programs it adds interactive functionality, including the ability to post and reply to messages in customized conferences; to send and receive e-mail; to chat in real-time, either one-on-one or in groups; to search, view, upload and download files from customizable file libraries; to send instant pages to other users; to process questionnaires and more. All versions include software to connect to the Internet and provide controlled access to e-mail and Usenet newsgroups. Additionally, when set up as a dial-in or intranet server, access can be given to specific callers that allows them to surf the Web using the system's built-in browser, even without them having access to TCP/IP networking. Each package also includes an electronic commerce gateway that allows the Wildcat! Interactive Net Server to receive and process check and credit card transactions for goods or services. It offers companies the latest in secure transaction processing and the ability to handle instant subscription access and real-time billing. For companies who have not yet have established merchant services, an account application with a major institution specializing in online commerce is provided. All Wildcat! Net Servers (except the Personal Edition) also include a one-year license for a logo-branded Custom Connector for marketing the system like America Online, the worlds largest information service. Wildcat! Interactive Net Server sites can be reached through LAN, Internet, or by direct dial, exposing them to the vast number of modem-equipped users without an Internet feed.

The Community Edition (MSRP \$249) and Personal Edition (<\$10) share the above feature set. The Community Edition is a box-based retail product while the Personal Edition is distributed in a CD-pack with documentation on disk.

In addition to the above basic feature set, the Business Edition (MSRP \$1495) adds a full-featured Report Generation System that shows which system areas are being accessed, which files have been transferred, allows system administrators to graph, report, and export data from online questionnaires and polls, and easily extract demographic and marketing information for printing or exporting. The Reporting System also includes utilities to purge and prune message areas and locate and purge files in the different file libraries. One year toll-free product support is included with the Business Edition.

The Enterprise Edition (MSRP \$3995.00) includes all the features of the Business Edition and adds the ability to receive (and reply) to any messaging on the Server directly from any Intranet desktop using Microsoft Exchange. This allows every Microsoft Exchange user to read and reply to any message, internal or external, local or Usenet, right from the desktop without needing to log on to any server and check for messages. It too includes toll-free support for one year.

Although each of the WINS products allows a specific maximum number of concurrent connections for using the message, file, chat and other interactive client systems, they all allow unlimited concurrent access for users accessing the Web server. For non-Web activity the Personal Edition is limited to one connection at a time, the Community Edition allows for 2 concurrent callers, the Business Edition expands the connection count to 16 and the Enterprise Edition provides for up to 64 simultaneous connections to access the interactive client activities. All products except the Personal Edition can be expanded with inexpensive 8 and 32-pack connection licenses.

The Community, Business and Enterprise Editions are available through distributors including Merisel, Ingram Micro and DistribuPro, and through Wildcat! Certified VARs. The Personal Edition is designed as a promotional item and is only available direct or as a Bundled special.

## **An Exciting Array Of Add-On Packages for *Wildcat! Interactive Net Server*.**

Make your *Wildcat! Interactive Net Server* system the ultimate online service with these intelligent add-ons. Easy installation, set up and customization combined with 32-bit performance make these products the best in the business. Plus, *Wildcat! Interactive Net Server* engineers designed each piece to enhance any *Wildcat! Interactive Net Server* version so you can benefit from them whether you're just starting out or have an established commercial online service.

### **8 and 32 Pack Node Increases**

Extend the number of simultaneous connections your *Wildcat!* system can support by adding an 8 or 32 line software upgrade. The line count upgrades give System Administrators the flexibility to start with lower line counts then later add lines as required. Additional lines can be configured to support Telnet, FTP, WWW, modem, LAN or other connections. These software upgrades take minutes to install and allow use of existing configuration and data files. (Additional hardware may be required to support additional lines).

### ***wcCode* Custom Online Development Engine**

With the *wcCode* Integrated Development Environment for *Wildcat! Interactive Net Server* you have the ultimate tool to customize your online service. *wcCode*, a structured procedural programming language modeled after the popular and easy-to-learn BASIC language, is a powerful tool for developing custom applications for any *Wildcat! Interactive Net Server* online service. In fact, the entire ANSI/ASCII caller interface for *Wildcat! Interactive Net Server* was developed in the *wcCode* language. In addition, *wcCode* gives you easy access to all the *Wildcat! Interactive Net Server* user, file and message databases so it is the ideal tool for developing custom maintenance applications for your system.

### ***wcCode* Plus Pack**

There is no need to settle for a "default" interface any longer. You could conceivably rewrite the entire bulletin board system interface from scratch using *wcCode*, but why "re-invent the wheel" when the actual *wcCode* source code for *Wildcat! Interactive Net Server* is available? Get under the hood and modify any and every aspect of your *Wildcat! Interactive Net Server* online system so that it meets your needs exactly. The *wcCode* Plus Pack requires *wcCode* for *Wildcat! Interactive Net Server* and includes more than 15,000 lines of source code developed by our professional engineering team.

### ***wcExchange***

*wcExchange* is a powerful mail transport system that connects your *Wildcat!* system to Microsoft Exchange. System Administrators looking to set up an online service and also need an e-mail system for their LAN can look to *Wildcat!*, *wcExchange*, and Microsoft Exchange to solve their messaging needs.

### ***wcReports***

The *wcReports* client gives you more flexible access to the *Wildcat! Interactive Net Server* user, file and message databases. You can set match criteria based on content of any combination of fields in the databases, and you can save frequently used match setups to disk for easy access and batch processing. Generating reports, statistics, and lists has never been easier. *wcReports* is the ultimate tool for busy system administrators who need batch processing power.

### ***Internet Connectivity Pack***

Become an Internet Service Provider for your members using the Internet Connectivity Package (ICP). With thousands of people getting online everyday, it makes sense for Administrators to step up to fulfill that the need. With the ICP you can give your members access to e-mail, files, news, and even the World Wide Web through your *Wildcat!* Online Service. Features of the Internet Connectivity Package include Telnet, FTP, and UUCP.

### ***wcSubscribe***

Are you tired of waiting for subscription payments through mailed-in checks? Offer instant subscription access and real-time billing with *wcSubscribe*. *wcSubscribe* is an electronic commerce gateway where your *Wildcat! Interactive Net Server* system receives and processes checking and credit card information through your credit card merchant account. *wcSubscribe* works through modem or TCP/IP connections and offers the latest in secure transaction processing. With *wcSubscribe* you can offer real-time electronic commerce and watch your revenues grow.

### ***Wildcat! Software Developers Kit***

With the release of *Wildcat! 5* and *Navigator*, we have opened up a floodgate of opportunity for third party application development. To satisfy the needs of third party programmers, we are working on the *Wildcat!* Software Development Kit (SDK). The SDK allows developers to create applications that interface with and extend *Wildcat!*'s capabilities. The SDK consists of several parts that includes the following APIs:

- Wildcat! Server API
- Door32 API
- Navigator API
- Wildcat! Services API

### **HoTMetaL Pro 3.0 by SoftQuad**

HoTMetaL PRO by SoftQuad is a full-featured Web authoring tool for use with *Wildcat! Interactive Net Server*. Touted by PC

Magazine as the best HTML authoring tool for the World Wide Web, HoTMetal PRO 3.0's numerous new features and enhancements are designed to make document creation faster and easier. And if you like HoTMetal FREE, you'll love the extra power you get with HoTMetal PRO 3.0. HoTMetal PRO features automatic import and conversion of Word, WordPerfect and other files; MetalWorks graphics program for creating web-ready image maps; support for HTML 3.0, 4.0 and Netscape extensions; word processing features like a spell checker and thesaurus; a printed manual with tutorial; and access to SoftQuad's technical support. Upgrade to HoTMetal PRO 3.0 and put more power into your web publishing!

### **Platinum Customer Access Program**

Platinum Customer Access is a special priority support program that features extended hours (5 A.M. to 8 P.M. PST) and priority access to our most experienced technical support engineers. Platinum Access can be accessed in either of two ways: by a special Platinum Customer Access 900 number, or an annual subscription plan providing you with up to 5 hours of toll-free access.

### **The Auto Update Plan (AUP)**

Subscribers to the AUP get instant access to the latest features and technology through the Mustang Auto-Update Server. As a member of the AUP, these updates are automatically sent to you through a modem or telnet connection to the AUP server. Subscriptions to the AUP are available on an annual or monthly basis.

### ***Wildcat! Interactive Net Server***

*Bridging the gap between BBS and Internet Technology*

What do you get when you combine the ease of the WWW with the power of The World's Most Popular BBS Software? [\*Wildcat! Interactive Net Server\*](#), the first commercially-available 32-bit, true client/server online service system. Mustang has taken the features that make *Wildcat!* the choice of Sysops worldwide and combined it with the most popular interface for navigating the Internet: World Wide Web. The result is an exciting online service solution that can give you everything you need to run a simple two-line BBS and still have the power to create a presence on the World Wide Web, become a commercial Content Provider, or even to develop into a full-blown Internet Service Provider.

### **QmodemPro for Windows 95 v2**

QmodemPro for Windows 95 v2 is The Premier Communications Solution for Windows 95. Dial into BBSs and online services easily with your modem or Telnet into your favorite Internet sites with the built-in TCP/IP support. True 32-bit multithreaded operation ensures fast performance no matter what the task and QmodemPro's MAPI, TAPI and OLE 2.0 support guarantees compatibility with your other Windows 95 applications. Package includes GIF/JPEG/BMP file viewer, over thirty terminal

emulations including Remote Imaging Protocol (RIP), multimedia sound file support, compiled script language (SLIQ), customizable Windows tool bar, programmable macro keys, transfer protocols including Zmodem, Kermit and CompuServe B+, and an icon-based dialing directory.

**Suggested List Price: \$129.**

### **QmodemPro for Windows v1.11**

Now the power and flexibility of Qmodem is available for Windows. QmodemPro for Windows allows you to transfer data plus send faxes directly from your Windows word processor. Package includes send and receive fax (Class 1 or 2), GIF/BMP file viewer, over thirty terminal emulations including Remote Imaging Protocol (RIP), multimedia sound file support, compiled script language (SLIQ), Windows tool bar, programmable macro keys, transfer protocols including Zmodem, Kermit and CompuServe B+, dialing directory icons, LAN modem support (NCSI/NASI/INT14) with appropriate Windows drivers, and setups for 350+ popular modems. Network 5-pack also available.

**List Price: \$99. Network 5-pack also available**

### **QmodemPro for DOS**

The latest DOS release of Qmodem, QmodemPro for DOS, is available in a package designed for you -- whether you're just discovering the online community, or you're a discriminating power user who demands a high performance, thoroughly professional package.

**Suggested list price: \$99**

### **Off-Line Xpress for Windows**

Off-Line Xpress (OLX) for Windows is a QWK-compatible mail packet reader for wcMail, Tomcat, QMail, and more. Reading mail from BBSs has never been easier. OLX can read packets generated by any QWK compatible mail door used by most BBSs, and generates reply packets in the QWK format which can be uploaded back to the originating BBS. DOS version also available.

**Suggested list price: \$49**
