Mac: ANDSM003 Win: ANDSW003

Andromeda Series 3 Screens offers the first true digital solution for special effect line conversion and mezzotint screening. It's a great artistic alternative to conventional halftone dot screening. - Convert continuous tone photographs to pure black & white patterns of various sizes (and reduce file size dramatically).
- Colorize your screened image as duotone. It's a less expensive alternative to four color production.
- Add digital engraving techniques to your creative options.
