Mac: HIGHM001 Win/Win NT: HIGHW001

\$394⁹⁹

Protect your digital images from unauthorized use with FBI (Fingerprinting Binary Images) software! The FBI Writer embeds an invisible fingerprint within image data that remains in place after the file has been opened, edited or copied. The FBI Detector identifies fingerprints in any image that has been encoded with the FBI Writer. It's the first major breakthrough in the fight against copyright abuse of digital images!

- Works with all continuous tone RGB, CMYK or grayscale images supported by Adobe Photoshop
- FBI fingerprints survive conversion and reversion from numerous image formats, including JPEG and GIF

- Register your fingerprint with FBI Registry for \$39

ADDING A FINGERPRINT:

Open your photograph into Adobe Photoshop and Select FBI Writer from the Filters menu.

The FBI Writer dialog menu allows you to add a special reference number along with the fingerprint ID.

FBI Writer confirms that a fingerprint has been placed into the photograph.

DETECTING A FINGERPRINT:

Scan in the photograph you suspect has been used without your permission.

Open the scan into Adobe Photoshop. Select FBI Detector from the Filters menu.
