File Menu

File

Set CD-Rom drive

Normally the viewer tries to locate the CD-Rom by itself, but if it can't find it, you can set the correct location here.

New CD-Rom

You can use this option to update the arealist if you have changed the CD-Rom while the program is running.

Reset Settings

Lets you restore all the settings to the default vaules. This can be useful if you have moved/resized the windows and you want them back at the original position.

Save Settings

Saves most of the windows size, positions and fonts to a setup file and next time you start the viewer these settings will be automatically loaded. The settings file is called XVIEWER.INI and its located in the \WINDOWS directory.

Quit

Exits the viewer program.

Edit

Edit

Set Font

Here you can set the style of the text in the arealist.

Search menu

Search

Search (Control + F)

This option lets you search the whole CD-Rom for a given keyword. The search will be made in all fileareas on the CD. A maximum of 1000 search hits will be listed. Local search can not be done from this menu.

Press here for more information on the [search window](#)

Info menu

Info

Help

Will show this helpfile

About Shareware

Will show a message defining what shareware is.

About Synchron Data

Will show a message about our Company.

About Browser

Displays the aboutbox for this program

Area viewer window

The Area viewer window will appear everytime you have selected an area in the main window or made a successful keyword search. This window shows you the files in the selected area or the files that matched the search. If you click on one file an action will be performed depending on the the selection in the "function" menu.

You can scroll the window Up or Down using the scrollbar to the right of the window or using the Cursor/Page Up/Down keys.

The menu on top of the window has the following choices:

Menus

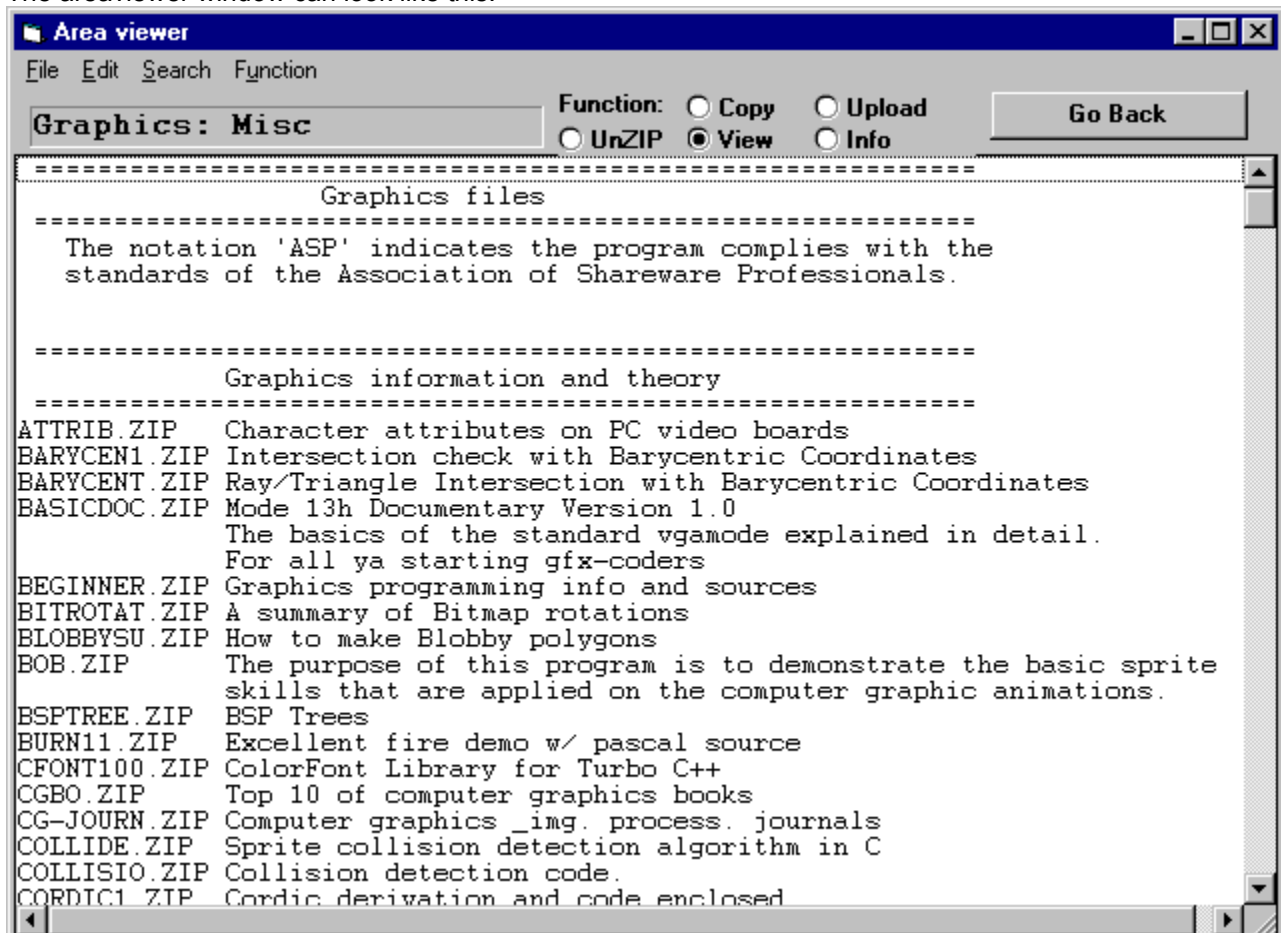

[File](#)

[Edit](#)

[Search](#)

[Function](#)

The areaviewer window can look like this:

File

File

Close (F1)

Exits to the main Window.

The **Escape** or **F1** key on your keyboard will do the same.

Edit menu

Edit

Set Font

Here you can set the style of the text in the area viewer.

Search menu

Search

Search (Control + F)

This function has the same function as the Search in the previous windows. The difference is that here you can select if you want to search in this area(local search) or in all areas(global).

Function menu

Here you select what you want to do when you select a file with the left mousebutton.

If you select a file and press shift at the same time the length of file will be displayed at the top of the window.

These functions can also directly be selected through the function buttons just above the filelist window.

Function

View file

If the filename you have selected ends with .ZIP an another window will appear with a list of the contents of the .ZIP file. From this list you can then select what file inside the .ZIP to display.

The **escape key** or "Go Back" button will close the window. If you press on the big "**X**" button, the first file in the list will be selected.

On the bottom of the "Zip Contents" window you can select what you want to do with the file you select. The function of these buttons are the same as the one in filelist window.

If the filename doesn't end with .ZIP the fileviewer window or the picture viewer will appear.

Copy file

This function allows you to copy the selected file to an another drive for later use. If you select a file with this option selected a fileselector will appear where you can select the target drive and directory.

Upload file

This function is useful if you want to transfer the selected file to an another computer or calculator using the standard RS-232 serial port.

[Klick here more information about the serial transfere window.](#)

Show Fileinfo

Will display a dialogbox with the filelength of the selected file.

Another way to display the length of a file is to hold down **shift** and select a file. The length will then be displayed at the top of the window.

ZIP contents window

This window will appear if the filename you have selected ends with **.ZIP**. The window will list the whole contents of the **.ZIP** file in the listbox. From this list you can then select what file to access.

What will happen when you select a file depends on the current mode selected at the bottom of the window and the filetype.

On the bottom of the "Zip Contents" window you can select what you want to do with the file you select. The function of these buttons are the same as the ones in areaview window.

The **escape** key or "Go Back" button will close the window. If you press on the big "X" button, the first file in the list will be selected.

The viewer that will be activated depends on the extension of the file.

If the selected file ends with:

.HLP the software will try to view the file as a windows helpfile.

.EXE, .COM, .ARJ, .ZIP, .LZH, .ZOO, .LHA nothing will happen.

.BMP, .GIF, .JPG, .IFF, .IMG, .PCX, .TGA, .TIF, DIB the software will try to load the file as a picture in the graphicsviewer.

All other extensions will load the fileviewer.

The ZIP-window can look like this:

Global Search window

This window is used for searching for keywords in the filelist.

The **local search** checkbox is used for selecting if the search engine shall search in all areas or in the current selected area.

With the **Case sensitive search** checkbox you can select if the search should be case-sensitive or not.

When the search is completed the result is shown in the areaview window.

The search window looks like this:

X-Viewer fileviewer

In this window the actual contents of the file is displayed.

You can use the scrollbar on the right or the Cursor/Page Up/Down keys to scroll the text up or down.

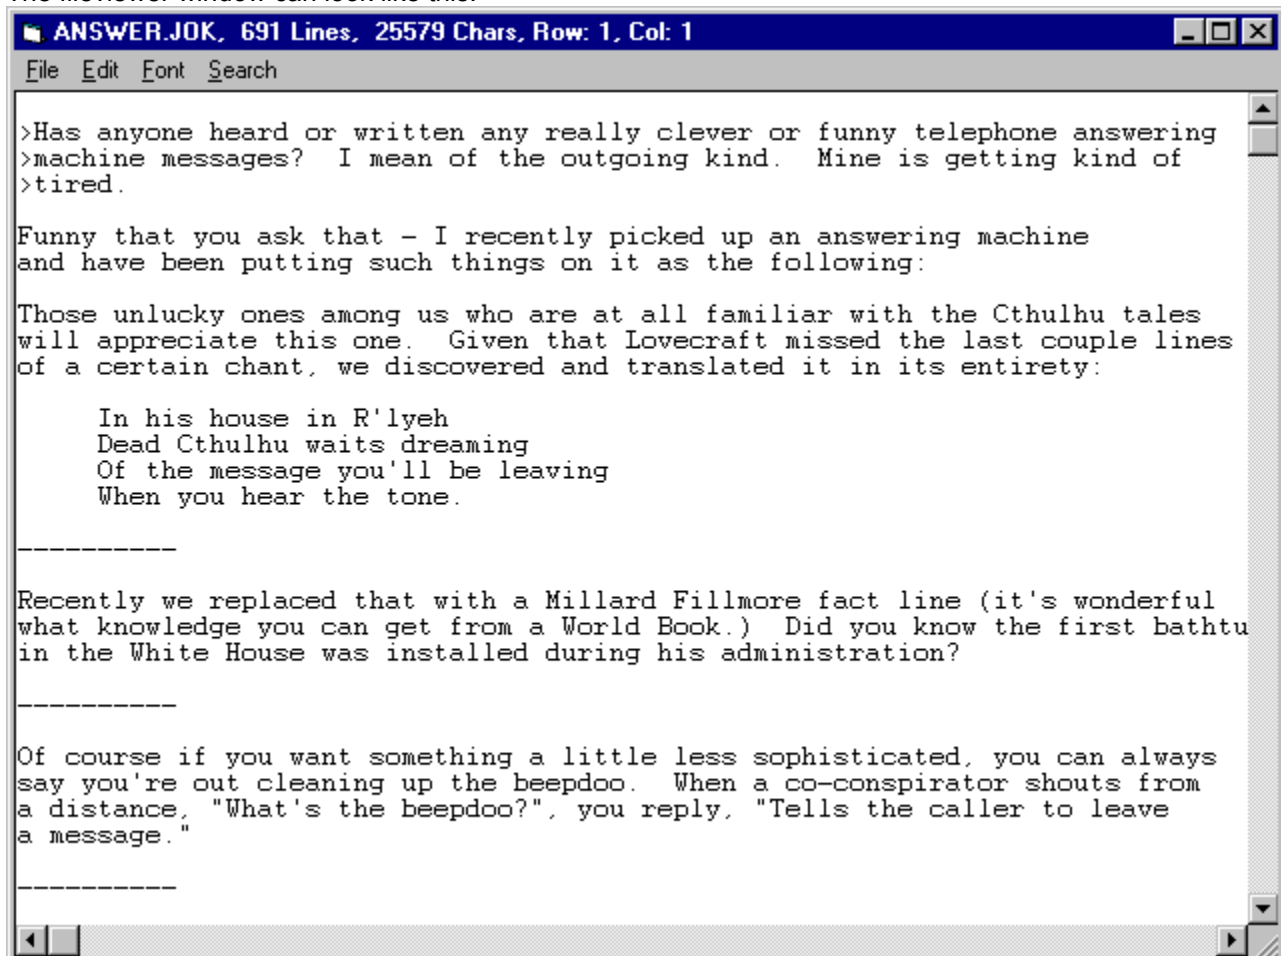

On the top of the Windows you can see the following parameters:

- * Number of lines of the text
- * Number of characters in the text (the filelength)
- * The current row number the cursor is located on
- * The current column the cursor is located on

Font

Set Font

Here you can set the font of the text.

Search

Search

Find

You select this option to start a new search. A window will appear in which you can enter the keyword to search for.

Find Next

Finds the next line that matches the keyword.

Find Previous

Finds the previous line that matches the keyword.

The search Window looks like this:

Search

X-Viewer CD-Rom drive select

Here you can select the drive where the CD-Rom are CD located.

X-Modem Upload

This function is useful if you want to transfer the file to an another computer or calculator using the standard RS-232 serial port.

X-modem is used as protocol for transferring the files. You can only Upload files in this viewer, not downloading. A special X-Modem uploading window will appear when you select a file. In this window you can select the desired communication speed and communication port. When the target machine is ready just press the "Start Transfer" button to start the upload. If you press the "Cancel" button while uploading the upload will be aborted. Just press the cancel button or the escape key to return to the previous window.

The "Send Teststring" button sends the following string to the serial channel "This is a teststring!". This function can be usefull when debugging the serial communication.

Graphics viewer 1.0

This window will appear if the file you are trying to view has the following extensions:

.GIF .JPG .BMP .IMG .PCX .TGA .TIF .DIB

Main Window

The first window that will appear when you start the viewer is the extended arealist. This is the list of all the fileareas located on the CD and all the files on this CD can be found in these areas. A scrollbar will appear in the bottom of the list if all areas can't fit the window at the time.

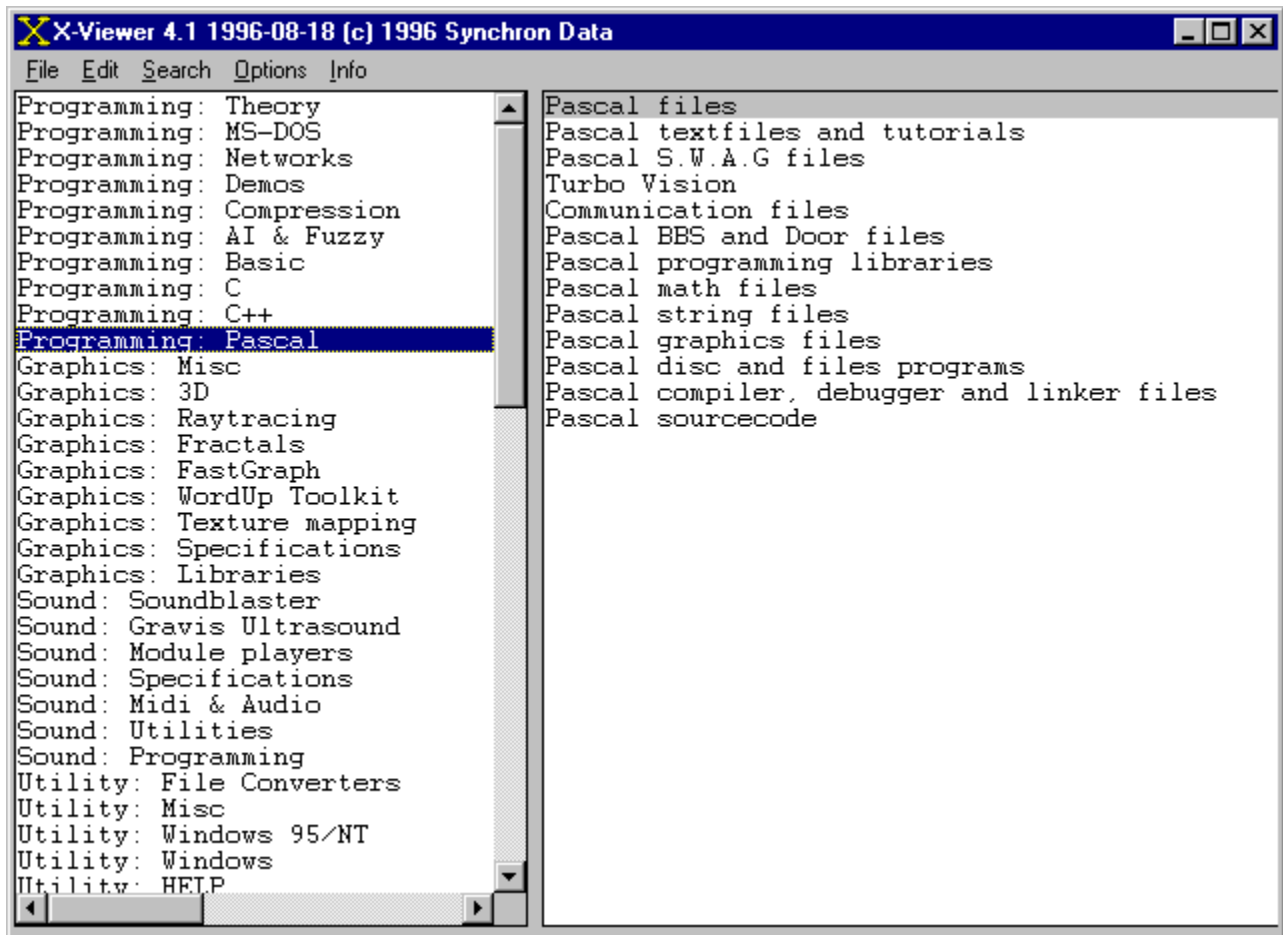

The menu on top of the window has the following choices:

Menus

<u>F</u> ile	Filehandling functions
<u>E</u> dit	Font settings
<u>S</u> earch	Global search functions
<u>O</u> ptions	Options
<u>I</u> nf	Information

When you select an area the following area-viewer window will appear.

The standard arealist can look like this:

You can navigate the cursor using the cursor keys.

Introduction

Introduction to the X-CD Viewer.

This easy to use universal program are used to access all the CD-Roms created by Synchron Data. It lets you view and search the files in a easy way.

Many of the files located on this CD are **SHAREWARE**. her is a definition of shareware:

Shareware is an exciting marketing method which allows you to try top-quality software before you pay the author. With Shareware, you cannot be disappointed spending money for a program that's not right for you. The small fee you pay to us covers only the duplication and distribution costs, and permits you to evaluate the program.

If you continue to use the program, you must send the author an additional payment which may entitle you to technical support, printed manual, bonus programs, and more. Your payment supports authors, enabling them to continue writing newer and better Shareware programs.

Tips and Tricks

Here are some tips to make your life easier using this program.

- Use the **ESC** key to quickly switch back to the last window.
- Hold down the **SHIFT** key and at the same time select a file and the filesize will show in the upper part of the window.
- Use the right mousebutton to close the current window.
- Use the cursor keys to move around in the extended arealist. Cursor left/right will switch list and cursor up/down will move the cursor up or down in the list. The Tab key can also be used to change current list.
- To speed up the pictureviewer you can try to change the settings in the pictureviewer menu.
