1.2 Introduction

INTRODUCTION

Please Note: This CD was designed with Workbench 3.0+ in mind, it will work on WB2.0 or higher, but with some restrictions. This CD does not support WB1.3 or lower.

SAdENESS PD & N.F.A. presents:

--- AGA Experience Volume 1. ---

On the market today there seems to be a CD covering virtually every subject. Before starting this CD, we decided that we wanted to create a CD that got the very best out of the 'new' (around 3 years old!) AGA machines. On this CD you will find hundreds of games, slideshows, utilities and demos which take full advantage of the superior AGA chipset found in the A1200/4000 (at the time of writing), if you have one of these machines you have come to the right place.

We decided from the start that we wanted to have as much of the contents as possible ready to run straight from the CD. Some CDs have everything compressed which in my opinion is really defeating the object of CD. Why shouldn't you be able to use as much as possible straight from the CD? Due to this, we have also stayed away from confusing menu systems, and have opted for the approach most people should be happy with - a MagicWorkbench front-end with virtually everything accessible through a standard double-click with the mouse button. With most things ready to run, this CD holds slightly less than some other CDs, but I think for most people having well over 700 meg (decompressed) is enough!

We are very proud to bring you this AGA-Only CD. We have worked very hard on it for many months now, and have done our very best to ensure it is of the very highest quality.

We hope you enjoy using it.

Richard Brown.

Kristian Phillips.

1.3 System Requirements

SYSTEM REQUIREMENTS

Most of the programs in this compilation were designed for use on an Amiga computer which is running a minimum of Workbench 3.0 or higher. A lot of the programs on this CD also require the AGA chipset, which at the time of writing includes A1200s and A4000s. Some of the programs on this CD will also run on the CD32 but may require hardware that is not available on the stock CD32 console.

If a program does not run as expected, please check that you have run the 'ClickMe!' icon first. If you have, it may be due to a lack of memory or an incompatibility with an upgrade you own.

Minimum Requirements

WB 2.04+
2 meg RAM.
CDROM drive (duh - really???)
Amiga (double duh!)
68000 processor.
ECS Chipset.

Recommended Requirements

WB 3.0+
2 meg RAM (or more).
Double Speed CDROM drive (or faster).
Amiga 1200 (or higher).
68020 processor (or higher).
AGA Chipset (or Graphics card).

To fully utilize the programs on the disc, using the CD32 system, you may need to add the optional keyboard, mouse, floppy drive, and RGB monitor. Some of the files in this collection may be stored in compressed formats and need to be decompressed to a floppy or hard disk to run. Due to the fact that this CD is NOT BOOTABLE, if you wish to use it on a standard CD32, you will have to use some sort of file transfer program in conjunction with a bootable CD. If you are not sure about this, we would be pleased to advise.

1.4 Instuctions

LOADING INSTRUCTIONS:

The following assumes you have already loaded Workbench (or you wouldn't be reading this! or would you??..... ;-)

- 1) FIRST OF ALL, DOUBLE-CLICK THE 'CLICKME!' ICON. THIS MAKES CERTAIN ESSENTIAL ASSIGNS.
- 2) MAKE SURE YOU ARE USING A SCREENMODE WITH AT LEAST 8 COLOURS. YOU CAN CHANGE THE SCREENMODE BY USING THE SCREENMODE PROGRAM IN THE Prefs DRAWER OF YOUR BOOT DISK (WORKBENCH). OR LOAD THE SCREENMODE.PREFS ICON. THIS WILL MAKE THE SCREEN FLICKER ON SOME MONITORS.
- 2) IF YOU ARE NOT ALREADY USING MAGIC WB, THEN THE COLOUR SCHEME WILL BE WRONG. TO CORRECT THIS, DOUBLE-CLICK THE 'CLICKFORCOLORS ICON'.
- 3) IF YOU ARE USING A SCREENMODE OF 16 COLOURS OR MORE, SOME OF THE ICONS MAY LOOK ODD. TO CORRECT THIS, LOAD THE MAGICCOLORS PROGRAM.
- 4) IF YOU WOULD LIKE TO CHANGE YOUR FONTS FOR SOME THAT ARE IN MY OPINION MORE READABLE, LOAD THE 'CHANGEFONTS' ICON.
- 5) THAT'S IT!

NOTE: WE HAVE RECENTLY FINISHED A BOOT DISK FOR THIS CD. THIS BOOT DISK IS PRIMARILY INTENDED FOR USERS ONLY USING FLOPPY DRIVES WITHOUT A HARD DRIVE. PLEASE CONTACT US IF YOU ARE HAVING TROUBLE WITH THIS CD AND WOULD LIKE A COPY OF THIS BOOT DISK.

You do not HAVE to do any of the steps except STEP 1. If you intend to use this CD through Shell or a Directory Manager (like Directory Opus), you do not even have to do this!

I would advise that if you are planning to use this CD a lot (and why not??), then you could make some of the above changes permanent. This will save you having to do all the above everytime you want to use the CD. Firstly, you should save your screenmode preferences for at least 8 colours. You should then save your palette prefs to keep the MagicWB palette. If you intend to use a screenmode of 16 colours or more, you should also put the MagicColors program into your WBStartup drawer. If you do these things, you only have to load the 'ClickMe!' icon each time, and the ChangeFonts if you want to change your fonts. (One easy way to make your Workbench permanantly MagicWB-ised is to install the MagicWB1.2 package in the AGA_Uutilities/MagicWB/MagicWB1.2p directory)

NOTE: If you have any problems following these instructions, then please read the Amiga Workbench/AmigaDOS manuals first. These will help you a great deal when using your Amiga in general. If you still don't have a clue, you can contact us.

1.5 Exclusive NFA Productions

Exclusive NFA Productions

On this CD, there are 14 Exclusive Titles.

3 Slideshows which include Reservoir Dogs, Pulp Fiction and a BodyShop/Big Girls special.

8 Card Sets which include Reservoir Dogs, Pulp Fiction, BodyShop I,II & III, Babes Galore, Scenic and Wings & Wheels.

These Exclusive programs are ready to run this CD, and may NOT be re-sold by any other PD library.

3 Disk Magazines, which are: Out Of Space issue 1, 2 & 3.

These programs are official NFA productions, and were written specifically for the 'AGA Experience volume one'.

1.6 AGA Utilities

AGA Utilities

On this CD there are over 100 meg of the best Amiga utilities. Most of them require a minimum of WB3, but some others require WB2.04+ There are two drawers - Ready_To_Run and DMS Utilities. The DMS files need to be copied to a floppy drive, and this can be done by simply double-clicking on the icon. You must then put a disk in drive DF0: and the disk will be copied to it (make sure the disk has nothing you want on it because the contents will be lost). There is an index in the drawer that lists the contents, and there are separate directories containing the files in order to keep the clutter down.

1.7 AGA Demos

AGA Demos

On this CD there are over 150 meg of the best demos specifically for the AGA Amiga, ie, 1200/4000. From our selection, we've picked the best demos to date since the A1200 was released.

DMS Files

Over 130 meg of demos are DMS files, to access these, double click on the icon you require, a prompt will then instruct you to insert a blank disk into drive DF0: Once you've done that, simply press return and the disk you require will unpack onto your disk ready to boot.

Ready To Run

We've selected the best demos we could find for you to use directly from the CD. To run these demos, simply double click on the icon and the demo will then run. Some demos will NOT allow you to exit back to Workbench, so at this

point you will have to reset your machine. We've tried our best to ensure all ready to run demos run efficiently.

1.8 AGA Slideshows

AGA Slideshows

On this disk we have selected over 150 meg of slideshows.

To unpack a slideshow, simply double-click on the icon. Multidisk slideshows are in their own directory so you need to unpack all the disks for the required slideshow to run.

Before you unpack, them read the description and make sure the slideshow is suitable for you or your child. We've tried our best to ensure you there is no porn on this CD, but there are naked women! There is no hard material but if you would prefer your child not to look at these slideshows, we suggest you stop him/her from unpacking them.

1.9 AGA Games

AGA Games

We have selected over 120 meg of AGA games for this CD.

DMS Files

There are over 80 meg of games in DMS format. These DMS's must be unpacked for you to be able to run them. To unpack them simply double click on the icon you require and insert a blank disk into drive df0: the game will then be unpacked onto the disk ready to boot from floppy.

Note: some games will require a hard drive to run them, so obviously they will not boot.

Ready To Run Games

We have selected 40 meg of the best games for you run straight from the CD. To run these games just simply click into the requested drawer and double click onto the games main icon.

Note: During testing some of the titles did not run on our accelerated Amiga 4000/040, but we are confident they should run on an Amiga 1200 but obviously we cannot be certain of this. Please let us know if you find any programs which do not run on your Amiga.

1.10 AGA Pictures

AGA Pictures

On this CD we have selected over 14 meg of the best pictures available and ready for you to view at your pleasure.

To view a picture simply double-click on the icon you require. The picture will then automatically be viewed.

If you are running this CD on an A1200, please allow time for the JPEGs to load, they are very slow at loading on a 1200, but please be patient.

If you are running the 'NEWICONS' package, you will see small 'thumbnail' versions of the pictures so you can see what they are like through Workbench. This works best if your WB is in 64 colours.

1.11 AGA Texts

AGA Texts

On this CD there are various text files and other useful sources of information. There is, for example, a detailed Amiga 4000 guide which tells you everything you will (probably) ever need to know about the machine, and also a few details about the A1200. There are details on connecting a CD32 to an Amiga, some useful Internet information and some reviews of popular upgrades. All of these files in this directory are ready-to-run straight from the CD.

1.12 AGA Programmers

AGA Programmers

On this CD you will find some AGA Programs and source code that coders will hopefully find useful. There is no index for this directory, as all the directory names are pretty self-explanatory. Also, I don't really know anything about programming, so any description I attach would be poor at best and probably just plain wrong!!

1.13 Music Modules

Music Modules

We have selected over 7 meg of the best music modules we could find. On other CD's you tend to get a lot of mods repeated, on this CD we have tried to get them from original sources.

To run a music module, simply double click on the icon you require.

If the selected module will not play, this means you haven't got enough memory to play it. The mods on this CD are quite large, so if you haven't got much memory, you will probably find that a lot of them will not play.

1.14 Disk Mags

Disk Mags

On this cd are over 20 megs of the best Amiga disk mags. These include the complete 1995 collection (to date) of the Amiga Report online magazine, the brilliant Aliens multimedia AGA magazine, and many others. In the DMS drawer are most of the AGA diskmags available including the great 'Word' by NFA.

1.15 Rendering

Rendering

There are around 45 megs of rendering software for the 3 most popular Amiga programs - Lightwave, Imagine and Real 3D. There are objects, fonts, textures, utilities and advice.

1.16 Note

PLEASE NOTE:

In order to make most of the contents of this CD easy to use and ready to run without any troublesome decompression, we have in some cases changed the 'Tool Types' of some of the PD/Shareware titles on this disc. This was necessary because there isn't any standard file/picture/text viewer used, and this causes problems for the programs locating text viewers etc. In the documentation of some titles, it states that the files should not be altered. I don't believe that changing some tool types is in breach of this request, but if any author objects to this very small change (Surely not!), then just contact us, and we will take your program off the CD in the next release. Some programs that did not originally have icons, have had them added. This is to make them easier to use for beginners. I can't see anyone objecting ;-)

I really do wish all of this was not necessary. I know exactly how annoying it is when trying to read docs only to get 'Unable to open your tool XXX'! For beginners this can be enough to completely fox them, and I don't think I could advise them to simply use the program without reading any instructions :-)

Also, occasionally some icon images have been changed in order to fit in with the MagicWB colour scheme. Just a reminder - if you like and use any of the shareware programs on this disc - consider PAYING THE SHAREWARE FEE!!!

HINT:

If you move some of the programs off this disc, and onto your Hard Drive for example you may find that when you try to read the docs, it says please insert volume aga. To get round this, simply click the icon once, then select 'Information' in the Icons menu. Change the line 'AGA:C/ppmore' to 'SYS:C/PPmore'. Then make sure you have 'PPmore' in the C directory of the disk you boot from. ('PPmore' can be found in the C directory of this CD.) This should solve all the problems.

Note: Some games/demos on this CD contain graphic sequences that may affect people with photo-sensitive epilepsy or similar conditions. If you have been advised to avoid strobe-lights or similar, you should

avoid using these games/demos, or if you do view them, proceed with caution. Please contact your physician for further advise.

Other demos may contain language unsuitable for young children, although we have removed all the programs we have found containing offensive language. Some slideshows also contain pictures which many would find unsuitable for children, or those who find nudity offensive. As far as is possible, the individual descriptions should note this.

1.17 Suggestions

Suggestions

We welcome any suggestions that you may have concerning this CD. If there are any areas that you think could be improved, or if you have any problems with this disc please get in touch. We are also interested in hearing of your suggestions for future CDs.

SAdENESS PD / NFA

SAdENESS PD has joined forces with one of the UKs best Amiga groups - NFA. They are most well known for their 'Bodyshop' series of slideshows, and have recently started producing games, demos and even diskmags (The acclaimed 'WORD' mag). On this CD you will find several NFA productions that are totally EXCLUSIVE to this CD. You will not be able to find them ANYWHERE else! Due to the fact that the exclusive titles may not be sold by other PD companies, if you want to get hold of them - you will have to get hold of this CD!

SAdENESS PD also supply Public Domain/Shareware disks for the Amiga range of computers. Prices start at just 25p per disk! If you would like to obtain our latest upto date catalogue disk listing our titles, simply send an SAE and blank disk to the address in the Contacting Us section.

N.F.A. can also supply many Amiga PD titles, and are always on the look-out for new members. If you would like to contact NFA for any reason, they can be contacted at the address found the Contacting Us section.

1.20 shareware

Shareware

Note that although you have paid for the CD, you don't own all the programs on it. Some of them are distributed as Shareware, which means that you have to pay for its registration if you use it regularly. Please support the concept of SHAREWARE. If programs are worth using, there are worth paying for. Registration fees are usually between £5 and £20 and the author will send you the latest version in return. You can send an International Money Order, or preferably a cheque but many authors don't accept cheques if they are outside the UK. Some authors prefer cash payments, and if you want to risk sending cash by registered or recorded post, It's up to you and at your own risk. For more information please read the documents associated with the programs you wish to use.

1.21 Legal Mush

IMPORTANT LEGAL NOTICE AND INFORMATION

If you use this disc, you agree to be bound by the conditions of its use.

1. We have used our best efforts to check that all software included on this disc is freely distributable software and that it complies with any limitations imposed by software authors. Programs on this disc were designated to work with the Amiga ® . Some may not work on your system.

1.22 Workbench

Magic Workbench

As you will see, this CD uses a smart 'MagicWB' interface. MagicWB was created by Martin Huttenloher. In order to fully utilise this new Workbench look, please read the 'Loading Instructions' section. On this CD, you will find many MagicWB icons created by various PD/Shareware authors. These are kept in the 'AGA-Utilities/MagicWB/' drawer. Also in there is a demo version of a great update to the package - 'MagicWB 2.0'. You can see just what a difference it makes by looking at the demo - registration details can also be found there. If you want to perform a full MagicWB installation, you can install the MagicWB1.2p package which is in the same drawer (a Hard Drive is recommended).

Once again, I HIGHLY recommend you register MagicWB in order to receive V2 as this will make your Amiga much more professional looking, and you will be able to hold your head high in the company of Mac/PC owners!

To contact the author of MagicWB (Martin Huttenloher), see his details in the MagicWB package. He can also be E-Mailed: xen@magic.in-ulm.de
