

Macro to allow use of a FORM window without leaving the macro. When you press any of the keys in the lookup table, the next part of the macro executes. Type "{User}Begin" to start the macro.

Macro by Barry Spencer; write up by Brian Stains.

5/26/84

```

Starting point:          BEGIN ->    {type}f
                               {LOOP}

{edit} {bs}:

Get keystroke:          LOOP ->    {get INPUT}
See if it would exit FORM:      {if #not#@iserr(@vlookup(INPUT,KEYS,0))}
If not, use keystroke:      {INPUT}
Repeat loop after keystroke:    {branch LOOP}          Stores keystrok
                                                    INPUT ->
Destination on          EXITLOOP->  {type}s          Lookup table:
exiting FORM:
                                                    KEYS ->

                                                    (End of macro)
