AUTOMATIC MESSAGE RETREIVAL FROM WORL

The two main routines in the macro are COMPUSERVE, and GC

COMPUSERVE performs the LOGON function, changing the to TYPE COMM, then dialing the number of the current .CCF file and sending user id and password.

GO is then called by COMPUSERVE. GO performs the dial which will take you to the SYMPHONY bulletin board, and read new messages since your last logon. These messages will be captured to the range A1..A8192. Next, the macro logs off of COMPUSERVE and hangs up the phone. Finally, the macro returns window to type SHEET and branches to the main menu.

INSTRUCTIONS

The *FIRST* thing to do when starting the program is to choose menu selection SET UP which will prompt you for your COMPUSER ID and PASSWORD. After this, you can use the CALL NOW choices. CALL NOW will access the bulletin board immediately prompts you for the time you want to call the bulletin board. You have supplied SYMPHONY with the accurate time when starting have a real time clock implemented on your system. Use STOP to examine the macro code in more detail.

CAUTION...Save an original copy of the macro before you add your user-id and password. If you need to change id or password at a later date, use a copy of this saved original file.

PRESS ENTER (RETURN) TO RETURN TO MENU!!
