This software is not a Public Domain. You can freely distribute ↔
if:

- no more than a reasonable fee is charged for copying or
down-loading;
 - no file in this distribution is changed;
 - the distribution is not part of a commercial product.
-

Although WebMaker has been thoroughly tested, no guarantee is given nor implied that this program is fit for any use. The program and the information within this text is provided on an "as is" basis. In no event will I be liable for any direct, indirect, incidental, or consequential damages resulting from the use of this program or the information presented within this text.

Commercial distribution of WebMaker or of a package containing WebMaker requires

my~approval

.

1.3 Introduction

Introduction

Since a long time, I has the idea to build a HTML pagemaker. I saw other tools running under other plateforms, like TkhML, or recently WebMagic.

The idea to make HTML pages only with a text editor like vi, emacs could be possible with macros which insert HTML tags. It's the case for HTML-Heaven. It was my first idea. But under Amiga, with a so-easy-to-use environment so drag&drop, with powerfull MUI GUI, WebMaker should be respect this builder spirit.

All products are registered to their authors.

1.4 Installation

Installation

WebMaker need to work fine :

- textfield.gadget (also avail on aminet dev/gui)
- MUI 3.x+
- AmigaOS 3.x+ - images datatypes gif, etc...

Click on icon to start...

WebMaker is looking for its localization, the drawer progdir:catalogs/ your_language

.

WebMaker need the drawer prodir:images

1.5 The Way to Use

Using

After running, WebMaker opens an text-edit window. Hit your text and drag icons.

You want set a bit of text in bold, for example. Select the text and click under B gadget, or go to menus.

The main idea is the insert tags into buffer happens where the cursor is. The text style attributes must be done on selected text.

The use is very intuitive.

All cut-copy-paste functions are enabled.

1.6 History

12/02/95 1.0B3 Link Colors implemented using palette.mui
 Tables, Cancel Saving bug fixed
 Comment bug fixed (Thanks _AG_) 12/13/95 1.0B4 Localisation, all
 menus
 items implemented,
 add Width and Height Image attributes 12/14/95 1.0B5 Add Show ↔
 Picture
 function 12/19/95 1.0B6 Add Bubbles - Asl Open Window fixed - ↔
 French
 Catalog and
 Documentations, New Text Gadgets (Bold, U, I),
 tests made by Bétatesters 12/23/95 1.0 Public Release, add Markup
 Window

1.7 Who thanks ?

Credits

I would like to thanks :

- All my BétaTesters (Alain '_AG_' Gaspard, Vincent 'Marcov' Demarquez,
 Philippe 'PhB' Brand, Florent Montheilet
 -very happy at Amiga Expo 95-, Maxx, JFP, etc...)
- My "Muse" (Eric 'ET' Totel for his wonderfull tool MUIBuilder, Stefan Stuntz for
 MUI, the creator of TkHTML, SGI for his WorkSpace looks like to the WorkBench (SGI
 was made in 1987 S-)
- All the people who makes our wonderfull computer more and more powerfull in this
 use (PD developers, ...)

1.8 The Twilight Zone

Future

WebMaker will be WYSIWYG ... Drag & Drop à gogo... to insert pictures, texts, ↔
sounds,
links !!!

Create is so easy.

I'm planning : - NetWeb , a Web Navigator but independent multi-taking multi- ↔
windows
- maybe a HTML datatype ... *8) NetSurf only with MultiView !!! Too easy, isn't?

1.9 Contacting the author ...

Contact

Webmaker is GiftWare, that means, if you want to send something : hard (I'm
looking for an accelerator board for my poor A2000, and an graphic board, soft
(Genius PD You have made), or anything.

If you are happy, unhappy, let me know. Your remarks are "builderfull".

I'm looking for translators for others languages. I have included the Catalog
descriptor to make your own. Please send me it for including in my next release.
