1.2 Introduction

```

Introduction
~~~~~
What does this little proggy do ?
It gives you som information about a window of YOUR choice.
For example: The window title, left edge, top edge, width, height,
the X position of the mouse (where you click), y position.
You can also use it to close other windows. And all values except x, y mouse
are modifiable.
```

1.3 Disclaimer

Disclaimer

~~~~~

The program is completely Freeware, so do whatever you want with it, but

YOU ARE USING THIS PROGRAM ENTIRELY AT YOUR OWN RISK ! THE AUTHOR  
CAN NOT BE MADE LIABLE FOR ANY HARM THIS SOFTWARE IS MAKING TO YOUR  
SOFT- OR HARDWARE !

## 1.4 Requirements

Requirements

~~~~~

You will need the following things to run the program:

- Kickstart 2.04 or newer
- A window to test the program on :)

1.5 Installation

Installation

~~~~~

Hmm, installation ???

Just copy the WinTool program to wherever you want it to be, for example  
C: SYS:Tools SYS:Utilities or something like that :)

## 1.6 Usage

How to use it

~~~~~

First of all:

To get the information of another window you do like this.
Activate the window you wish to "use". Now all values should have been copied
to the WinTool's window. And NOW you can do whatever you want with it,

Title:

Here is the title of the other window. You can change this if you like to.
But you can never write more characters than there was from the beginning.
For example: If the Title is "Shell #5", and you try to change it to
"Cyber Window", the result will be "CyberWin".

No changes will be made until you press the execute button!

Width:

This is the width of the window. You can change this value to whatever you want. But beware, it's not very good to change the window to 1*1. It could be pretty hard to find the pixel-window :)

Height:

The same as width, except it's the height your changing.

LeftEdge:

This is the left position of the window. Works the same as width, heigth.

TopEdge:

Just like LeftEdge, but it's the windows Top position.

MouseX, MouseY:

This is the X, Y position of where you pressed on the window. This is useful if you want to know exactly where you should place your gadgets. Trust me!

Close Window:

If you mark this checkbox you will try to close the window, when you press execute, that is. If that doesnt work you could use the Force option to. But be careful! If you use the force option the program just Closes the window and that could be a nasty thing to do if the windows program still is alive... If the window wont close and you use force the system might freeze.

Zip Window:

If this checkbox is marked, you will "Zip" the window, which is the same as pressing the Zoom-gadget on the window.

Execute:

This is where it all happens :)

No changes will be made until you press the execute button!
