SmallCalc made by [Gega](#) in 1995.

Thank you for using...

### 1.2 SmallCalc guide - Disclaimer

Disclaimer

~~~~~

The SmallCalc is a little, easy-to-use calculator, to change the original calculator program of WB3.x. With new features, like number base system changing function, or logarithm calculating. I am sorry, but the size is grew up a little, but it is still usable, I think. Installation and using is very simple. Made at Sunday, 19-dec-1995.

1.3 SmallCalc guide - Installation

Installation

~~~~~

Only copy the required version to a suitable sub directory on your hard disk, rename it, and it's ready to use. For this reason, I loose the install script from this archive.

---

## 1.4 SmallCalc guide - Legal Use

Legal Use

~~~~~

To use this program, you need nothing... My only one request,if you use it and like it, (or dislike it) please send me an e-mail, or a postcard, within your opinion about this stuff. If possible, hold together the binary file, and one of the documentation. If you send a mail, I send the registred new version to your e-mail address.

1.5 SmallCalc guide - Author

Author

~~~~~

Name : Gáti Gergely

E-Mail : gatig@dragon.klte.hu

ggati@tigris.klte.hu

Address : Budapest, 1093. Bakáts u. 1-3. HUNGARY

IRC : Glue on #magyar

Developed on A1200, 2M chip no fast, HD, no board.

## 1.6 SmallCalc guide - Usage

Usage

~~~~~

Very easy to use with mouse, but most of functions available by keystrokes. The useful keys:

numbers (numpad & normal)

A-F - Hexadecimal digits

DEL - Clear all (Ca)

BCK - Clears the last character («)

+ - Plus (numpad)

- - Minus (numpad)

enter - Equal (both)

point - Decimal point (numpad)

- - Change sign (normal)

* - Multiple (numpad)

/ - Division (numpad)

TAB - Change numeric system

F1-F10 - memories, 0-9 (F1-mem0 ... F10-mem9)

1.7 SmallCalc guide - Future Plans

Future Plans

^^^^^^^^

I shall write a new calculator, with more mathematical function, more help for programmers, clipboard support, and window position save option. The next version will be a programmable calculator, with any number of programs.

I want to end this project at about marc/apr of 1996, at the same time (or in the same pack) like a multi programming language interface for GoldED.

(most of it will be ARexx macro.)
