1.7 Usage

BlueInstall
archive consists of two programs:

BlueInstallPrefs
for creating the prefs file

BlueInstall
main program, is located in bin/ directory

You don't need BlueInstallPrefs so much because the prefs file is
a standart ascii file. You can also edit it by Your favourite text editor.

Prefs file

1.8 Specify of BlueInstall prefs file

Specify of
BlueInstall
prefs file:

Type: Normal Ascii file

Identification: None

Description:

First n lines could be used for remarks.
The specific data begin with the keyword <*Start> and should end with <*End>

Between <*Start> and <*End> can be any number of this structures:

```
# <Annotation>
    The mark '#' mean the begin of Button structure
    <Annotation> is for Your use.

next line is the text, which will be used as button name in
                BlueInstall
                next line is the information text. In
                BlueInstall
                 will be displayed when
    the user click to the questionmark
next line is the command line. This can define the action with the file
    (eg. can execute install script, show picture aso.)
    It is a simple formating text with following features:
        %d{title}   - this will call the directoryrequester and user can
                      choose the directory (usualy for instalation)
                      Check
                Example
                .
next line is empty
```

1.9 Descripted Example

```
    Example:
-- 8<  ←
    --------------------------------------------------------------------------
Generated by Blue Install, ©Blue Legend ©1998

*Start

#
Blue Install
Full version of BlueInstall|with the gui
C:LhA -a x Disk1:BlueLegend/BlueInstall.lha %d{Where with Blue Install ???}

#
Blue Legend Logo
Logo BlueLegend in GIF format
Sys:Utilities/Multiview Disk1:Html/BLLOGO.GIF Screen

#
BlaBla
SomeInfo|This info will be on the second line|third
Echo "Some message"

*End
-- 8<  ←
    --------------------------------------------------------------------------

    Description:
```

```
#
Blue Install                              - the button name
Full version of BlueInstall|with the gui  - the info, the mark '|' mean the new
                                            line
C:LhA -a x Disk1:Bl...                    - this command will be executed
```

1.10   BlueInstall usage

```
           BlueInstall
            can be found in the directory bin/. This a simple CLI command
with oly one parameter.

   Usage:

      BlueInstall <PrefsFile>

   The best: ... Try it (generate some PrefsFile using BlueInstallPrefs) :-)
```

1.11   Blue Install Prefs

```
            BlueInstalPrefs can be used for generating PrefsFile (check
           Description
           ).

   Menu:

    Project

      New          - New project

      Open         - Load project from disk

      Save
               - Save to disk
      Save as

      About        - About this program

      Quit         - bye, bye

    Generate       - Generating Prefs File

      Prefs file   - will generate single prefsfile from current project

      AutoRun disk - will generate all needed files for use with AutoRun

    Templates      - Templates for easy filling the Action line
                     In the directory Templates you can find the
                     example.
```
