1.1 AmIRC.guide

AmIRC 3.0 Guide - Table Of Content

Welcome to AmIRC, the AmigaOS IRC client (Version 3.0).

Thank you for reading this manual as it will help you make the most out of AmIRC and IRC in general. It will also prevent you from making a fool of yourself by asking silly question during your first IRC sessions.

Please don't forget to also read the Readme file included in the distribution archive as this will contain any last minute info that might be important to you!

To help you find what you want in this manual we've provided you with the following table of content. Feel free to jump directly to the chapter of your choice or you can also just browse through them.

- Introduction -

About AmIRC What is this program all about? What's new? List of all recently added features. Features Features of AmIRC. Requirements What is needed to use AmIRC? Copyright Copyright, author info and more.

1.2 AmIRC.guide/About AmIRC

About AmIRC

* * * * * * * * * * *

In short, AmIRC is the most versatile IRC client for the Amiga computer. It allows you to chat to other users worldwide over the internet using IRC.

IRC stands for Internet Relay Chat, originally written by Jarkko Oikarinen <jto@tolsun.oulu.fi>. In a nutshell, IRC consists of a network of computers (servers) that are connected to each other via the internet or a LAN, and allow users with proper client software to connect and chat with each other. Within this network, virtual space is divided up into channels, usually with a topic of conversation, where users can talk in groups. During your ventures on IRC you will notice

1.3 AmIRC.guide/What's new?

What's new?

Added in v3.0:

- * From Version 3.0 AmIRC needs a New Keyfile! You will need to upgrade to be able to use this new version to the fullest.
- * You can now open and close a window by double clicking on it's button in the Tray Window.
- * AmIRC now supports Mousewheel scrolling.
- * The Setup window is now layout in MUI Prefs style.
- * New

RECONNECT command to easily reconnect to a server.

- * Added IRCNet commands for Ban exceptions and Auto-Invite
- * Channelname gadget now has a Context Menu which makes joining and

leaving
 a channel only a right mouse button away.

- * The Userlist counter now shows number of users & ops. When channel has a user limit it will become a gauge showing the channel filling.
- * Channelwindow and logs now have a (configurable) timestamp.
- * Any URL sent to the channel will now be underlined and clickable, giving direct access to them. The URL Grabber will get them too for later reference. AmIRC now also recognizes URLs that aren't preceded with http:// and FTP URLs.
- * AmIRC will ask for a Browser if none can be found using either OpenURL.library, Sendbrowser.amirx or Voyager IPC.
- * AmIRC will now look for the ENV Variables REALNAME and USER upon start-up and use those if available.
- * AmIRC now supports

ColourCodes

, which means it will show individual message colours set by the sender! Rest assured this feature can be switched off! :) (Use at own risk ;-)

- * The Channel Limit and Keyword fields are switched between text and string object according to the user's status. i.e. When the user is not allowed to change them, he cannot access them.
- * The Channel Limit and Keyword fields are hidden when not the modes are not active on a channel.
- * The Topic is now a text field as long as the user is not a

Channel Operator and the channel has Topic Protection , as the user is not allowed to change the Topic anyway.

* When MUI Bubble Help is active, the TOPIC window now comes up with a bubble containing the user who set it and when, as well as the complete topic string.

- * The Text Input Gadgets now have a popup menu when the right mouse button is pressed when the mouse is on them.
- * With the new Terminal Login Mode AmIRC will open a mini 'telnet' connection window after the initial server connection. This allows you to bypass any firewalls, use relays etc. (This mode is activated by starting AmIRC from the shell using: "AmIRC TerminalMode" or "AmIRC TM").

Other recently added new features:

- * New Single Channel Window mode allows to join multiple channels in a single window.
- * Total Queueing. Now everything which isn't urgent (like KICK s or

MODE changes) is sent through the output queue to reduce risk of being kicked by a server due to flooding.

- * INFO Window has an additional Levelmeter which shows the number of unsent messages in the output queue.
- * AmIRC now also supports Contact Manager and can parse URLs from the URL Grabber to it.
- * The Scrollback Buffer can now be limited in size via Prefs.
- * Number of Query Windows can be limited.
- * AmIRC will now use OpenURL.library, if found, to send the URL to the browser.
- * AmIRC uses Vapor Update Library to check for new versions upon start-up. When a new version is available it can then be downloaded automatically.
- * You can now Ban Multiple users at once by multi-selecting them.
- * Invitations are now shown in an separate Invite requester. The requester can be disabled from the new 'Windows' section in the preferences.
- * The Lag-O-Meter permanently monitors and shows lag as a three-colour bar underneath the userlist. Clicking on the Lag-O-Meter opens the Information window, which has a graphical representation of the current lag, as well as the servername, current lag, last two lag probes and the average lag.
- * Frequently used channels can be stored in a Favorite Channels window from where you can join them by double-clicking on them.
- The new Tray window contains a button for every AmIRC window.
 Windows can be closed individually by clicking on their 'Hide' gadget. The Tray window shows number of messages in a window and indicates new messages after iconification. (Requires MUI v3.8+)
- * Dialog windows have a Rename button to change the nick for the window. Useful when someone re-enters IRC with a different nick.
- * Dialog and Channel windows have an [L] button to enable logging of that window to a file.
- * AmIRC now uses NList.mcc for it's listviews if found. (Not used

with OS2.x) DCC windows now have a Cleanup button to delete all finished or aborted transfers at once. * The /BACK command resets the Awav state no matter what it is. DCC Receive window has a Replace button to overwrite existing files. * DCC Receive window has a MIMEPrefs button to call up the MIMEPrefs program. * The Auto accept DCC send? menu item allows to start incoming DCC send requests without the need for confirmation. * Files received via DCC are opened in shared mode during transfer, allowing you to play or view them partially while downloading. (Especially for all you MP3 freaks out there:-) * AmIRC now uses MIMEPrefs for viewing files. * AmIRC now has an Plugin API, expect many separately developed extension modules. * The Serverlist is now divided into Server Groups to allow better organization of different servers of a network. * The Prefs menu has a new Windows section where can be determined which windows will open on start-up. 1.4 AmIRC.guide/Features

Features

- * Runs with Genesis, AmiTCP, Miami and AS225 without additional support libraries.
- * Built-in highly optimized DCC drivers for SEND, TSEND and MOVE,

with asynchronous file I/O and threaded network handling. Supports Drag&Drop sending of files and DCC. * Transparent implementation of DCC CHAT routing all /MSG S automatically via DCC CHAT if applicable, to save runtime and reduce IRC load. Option to automatically accept DCC CHAT connections. * Ultra fast text output and scrolling. Supports Cut&Paste for the list text. Supports proportional fonts. * Internal CTCP flood and DCC bomb protection. * Full support of the 'Undernet' IRC extensions, both reply codes and additional IRC commands. * Intuitive channel display with userlist and channel mode overview. Channel modes can easily be changed via gadgets. Configurable user action list to perform whatever action you like on users in channel by the press of a mouse button. * Supports QUERY windows for private chat. * Supports 'smart' banning. * Versatile ARexx port including server message parsing ("event trapping") and commandline/script interaction. * Easy command line aliasing. * Built-in IdentD (automatically disabled if another IdentD is already installed). * Supports nick notification, highlighting, ignoring, and kickban. * Versatile event handling allows you to bind sound effects, auto-deiconify or rexx scripts to certain events. * Server phonebook. * Last nick history stores the nicknames of the last nicks you've send MSGs to, received MSGs from or addressed publicly with 'nick:'. Reference can be used in all commands which require nick names, e.g. /MSG /OP /DEOP

```
. Automatic nick expansion on public
 messages with ':'.
* TAB messaging to automatically cycle the list of last used
 nicknames with a
             /MSG
              prefix.
* Auto rejoin channel on
             /KICK
              and auto reconnect to server facility.
* Auto
             /AWAY
              after a user-specified idle timeout. Also, auto unaway
 after sending public and/or private msgs.
* Auto update download. Check for and download new releases with a
 simple click.
* URL grabber for interfacing with a web browser. (Using
 OpenURL.library or
            ARexx
             )
* Support for DALnet extensions.
```

* AmIRC is fully localized thanks to ATO (http://ato.vapor.com/ato).

1.5 AmIRC.guide/Requirements

Requirements *****

What is needed to use AmIRC?

Hardware

AmIRC was written for the Amiga family of computers, and has been tested on Amiga 500, 1000, 1200, 2000, 3000, & 4000 computers in various configurations.

Software

AmIRC requires MUI V3.6 or later in order to run.

AmIRC requires KickStart & WorkBench 2.x or later, with setpatch 40.16 installed.

AmIRC020 requires a 68020 or higher CPU and OS3.0 or newer. This

version is optimized for such machines.

If you plan to run a TCP/IP stack and AmIRC among other Internet applications you should have at least 2 megabytes of RAM.

Finally, you need to have a TCP/IP protocol stack running, such as Genesis, Miami, AmiTCP/IP or Amiga Technology's as225r2 TCP/IP protocol stack.

1.6 AmIRC.guide/Copyright

Copyright ******

AmIRC has been designed, developed and written by

Oliver Wagner Landsberge 5 45549 Sprockhövel Germany E-Mail: <owagner@vapor.com>

This document was originally written by Laurence Walton <lww@vapor.com> and modified for the 1.65 release by Oliver Wagner, including Ariel Magnum's <amagnum@ibm.net> fine ARexx guide. Updated and revised for the AmIRC v3.0 release by Frank Mosch <frank.mosch@advalvas.be>.

Installer Script ©1995-99 Robert C. Reiswig All Rights Reserved

No part of this archive may be redistributed except with the entire contents of the original archive.

1.7 AmIRC.guide/Registration

Registration *******

Registering AmIRC

You may use AmIRC freely for a period of up to 30 days to evaluate the package. After those 30 days, you must either register AmIRC or stop using it completely. During the trial period, AmIRC is limited to an on-line time of 30 minutes, besides that, no functions are disabled.

To register AmIRC, see the included registration utility and assorted documentation. It has all the necessary info and prices. You can also

register on-line at http://www.vapor.com/.

Use a creditcard and have your keyfile in minutes!

1.8 AmIRC.guide/Installation

Installation

* * * * * * * * * * * *

How to install AmIRC

It is strongly suggested that you use AmIRC's installer script. This will make sure all necessary files are in the correct place and will make sure you will have AmIRC up and running in no time. The installer script requires that you have the Amiga installer utility (version 43.3 or later). Once you've unpacked the AmIRC archive you can start the installation by simply clicking on the install icon in the AmIRC drawer. The installation script will ask you some questions, depending on the experience level you've selected at the start, simply answer them and the installer will do the rest.

If you cannot or prefer not to use the installer utility, a manual install is relatively simple, just move the contents of the archive to a directory of your choice and it's ready to use. If you have met the

requirements

for the optimized version of AmIRC, delete the AmIRC file and rename "AmIRC020" as "AmIRC". You might want to copy the "MUI" directory of the AmIRC distribution to MUI:Libs/MUI/ to avoid version confusion.

1.9 AmIRC.guide/Connecting

Connecting

* * * * * * * * * *

Let's have a (first) go

Once you have

installed

AmIRC, you can start the program from WB by clicking on its icon. After a few moments you will be presented with the Server Selection Window. You will need to enter some data into the gadgets of this window in order for AmIRC to be able to log you onto an IRC network. First and foremost you will need to think up some witty and original nickname or handle by which you will be known during your IRC session(s). Make sure you pick an original one as some networks don't allow different users sharing the same name and won't allow you to connect until you try with a name that is not being used. You can supply AmIRC with 4 nicknames which it will subsequently use to try and connect to the network. You also need to provide AmIRC some additional information like your real name (be honest here!). If your TCP/IP stack is already running an IdentD service then you won't need to provide your username as AmIRC will get it from the stack and the IdentD gadget will be ghosted. Now you are ready to connect AmIRC to an IRC network. Either select a network and server from the list provided or enter the details of your own favourite server.

1.10 AmIRC.guide/Operation

Operation

Operation at a glance

The main AmIRC user interface is laid out in a logical, intuitive manner, making it easy to use. Here's an overview of the main interface:

- * The main feature of the interface is the Text Listview, where all incoming text is displayed.
- * Directly below this is the Textinput Gadget, labelled with the nickname that you have chosen. Any text entered here will be sent out to the IRC server.
- Directly next to the textinput gadget is the Logging Button marked 'L'. Clicking on it activates the logging of that window to a file.
- * To the right of the listview is a Scroll Gadget, which enables you to scroll backward through the text in the listview.
- * At the top left of the listview is a the Channelname Gadget that shows the name of the channel that you have joined.
- * To the right of the channelname, is the Topic Input/Display Gadget, where the topic of a joined channel is displayed. Many channels have topic protection, which means only channel operators can change the topic. If you can enter text in the topic bar (either because the topic isn't protected or you are a channel operator) you may change the topic of the channel by entering the topic in this gadget, and hitting the 'Enter' key.
- * To the right of the topic input gadget are theChannel Mode Buttons, which display the current modes for the joined channel. Users with Channel Operator (Ops) status may also use these buttons to change the current channel modes.
 - T Topic Protection: Toggles Topic Protection on/off. If

on, the topic can be changed by Channel Operators (Ops) only.

- N No Messaging: Toggles Messaging on/off. If active, a user can only write to the channel if they have joined it.
- S Secret: Toggles Secret mode on/off. If active, the channel is invisible until it is joined.
- I Invite Only: Toggles Invite Only mode on/off. If active, users can only join after they have been invited.
- P Private: Toggles Private mode on/off. If active, the channel will be invisible in the global channel list.
- M Moderated: Toggles Moderated mode on/off. If active, only channel operators (Ops) and users with 'voice' can type to the channel.
- L Limit: Sets a limited number of users allowed on the channel
- K Keyword: Toggles Keyword mode on/off. If active, Users can only join the channel if they give the correct keyword.
- B Ban: Sets/Displays the current Bans active on the channel
- * Below the channel mode buttons is the User Listview, which shows a current list of users on the joined channel. Double clicking on a users name will perform a

/WHOIS

on that user. Clicking once on a users name will set that user as the default to perform other operations on, such as an operation from the configurable user buttons. Pressing the right mouse button when on a name shows a menu where you can select the same functions as the User Buttons below.

- * Directly below the User Listview is the Lag-O-Meter. This meter indicates how much lag there is on your connection. Double clicking on it will bring up the INFO window.
- * Below the Lag-O-Meter are the User Buttons. These buttons are configurable from the configuration window, accessible by selecting 'Setup...' from the AmIRC Settings menu.
- * You can Drag-Highlight text in the listview in order to paste it elsewhere. you will need some type of snap utility such as Newedit or Powersnap in order to past the text into another application. The text is stored in the clipboard. To paste the text inside AmIRC you can use <right-amiga> V.

The TAB key will cycle through the names of people that have previously /MSG'ed you, and insert it into the textinput gadget. Simply enter your message after the "/MSG <user> " in order to

> /MSG them back.

Entering ':' first in the textinput gadget will automatically publicly address the last person you typed to using the ':' after their nick.

For a full explanation of all AmIRC functions and windows please check out the Reference section.

1.11 AmIRC.guide/IRC Terms

IRC Terms

Specific IRC vocabulary

Here's a list of some commonly used terms and expressions with their respective explanation:

- Ban: A channel mode set in order to prevent a user or group of users from joining a channel.
- * Bot: Short for Robot, a Bot is a script that acts like a user, and can execute a command upon a certain occurrence.
- * Client: Software that is written for the purpose of connecting to a server, in this case, an IRC server.
- Channel: A group of users on IRC. A channel will have a name (i/e, #AmIRC), and may or may not have a topic of conversation.
- * Channel Mode: The properties of a channel that allow or disallow certain activities. Channel Modes can only be changed or set by Channel Operators. The available channel modes are:
 - Invite Only: If active, This mode allows users to join if they have been invited by someone in the channel.
 - Private: If active, the channel is invisible in the global channel list.
 - Lag: The term which is used when the connection to a

server or client is delayed.

- Limit: If active, sets a limit on the number of users allowed to join a channel.
- Moderated: If active, only Channel Operators and users with voice may type input to the channel.
- No Messaging: If active, prevents users from sending a message to the channel until they have joined it.
- Secret: If active, the channel is invisible until it is joined.
- Topic Protection: If active, only Channel Operators may set or change the topic of a channel.
- Channel Operator (or OP): A user who has control over a channel. A user who creates a channel is given Op status, and in turn can give it to anyone else in the channel.
- * Chat Network: A network of computers that are interconnected so that anyone on any server in the network may chat with anyone else on any computer in that same network. Here's some major chat networks:
 - ARCnet: Amiga Relay Chat Network, partially running on Amiga servers.
 - IRCnet: Formerly part of EFnet, now split.
 - EFnet: Eris Free Network. The largest IRC network
 - DAL-Net: A different IRC network with some specialized functons that do not appear in typical IRC networks.
 - Undernet: An alternative IRC network
- Command: A message to an IRC server or to a local or remote client. Commands generally begin with a /. See Commands
- * CTCP: Client To Client Protocol, A standard for sending commands from one client to another, usually for the purpose of getting information from the remote client. See CTCP
- DCC: Direct Client Connection a standard for creating a direct link between two clients, for the purpose of sending or receiving files, or to carry a more secure conversation. See DCC
- * IdentD: IdentD is software that can be run on the client, allowing an IRC server to corroborate the identity of a client.

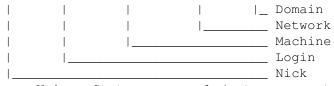

AmIRC has an IdentD built in, and will automatically disable it if an external IdentD is running.

- IRC: Internet Relay Chat Any Network of Computers that run IRC servers for the purpose of allowing users to connect to it using client software made for IRC.
- * Kick: The occurrence of a user being removed from a joined channel by a channel operator.
- Lag: Term to specify that the connection is delayed to some extend.
- MOTD: Message Of The Day, A message that may or may not be updated daily, that is meant to be read when connecting to an IRC server.
- * Netsplit: An event that occurs when a server goes down that other servers depend on for network packets. Any servers that are dependant on the crashed server will split from the net, that is, they will still be up and running, with active clients, but any clients on the other side of the crashed unit will appear to have all logged off at once.
- * Nick: Short for Nickname, this is an alias that you may pick for yourself.
- * Op: See Channel Operator.
- * Server: A computer that is Running IRC server software, allowing it to be connected to by IRC clients or other servers.
- * Server Operator: A person in control of an IRC server.
- * TLA (Three Letter Abreviations): Commonly used acronyms, not entirely restricted to 3 letters:
 - AFAIK: As Far As I Know
 - AFK: Away From Keyboard
 - ASAP: As Soon As Possible
 - ATM: At The Moment
 - BRB: (I'll) Be Right Back
 - BBL: (I'll) Be Back Later

Menus ***** What's on the menu? =========

> AmIRC AmIRC menu Windows Windows menu User Modes User modes menu Settings Settings menu Plugins menu Rexx

1.13 AmIRC.guide/AmIRC

Menus

=====

AmIRC Menu

Select Server... Opens the server window from which you can select various options for connecting to an IRC server. See Connecting

Reconnect

Reconnects to the previously selected server, without having to open de serverwindow.

Disconnect

Disconnects you from the current server without having to quit AmIRC.

Logging Enabled?

Toggles logging on/off.

Iconify

Hides the AmIRC window either in an icon on the Workbench screen or in the WB Tools menu (selectable in MUI Prefs).

Help...

Opens Amirc.guide for reference while using AmIRC.

About AmIRC...

Opens a window with information about AmIRC and its Developer. Here you may connect to the AmIRC home page if your browser is running.

About MUI...

This will open a small window that displays information about the current version of MUI that is installed on your system, also, this window provides the option to register or update your MUI software.

Quit

Will close the current instance of AmIRC, leaving other instances open.

1.14 AmIRC.guide/Windows

Menus ____ Windows Menu _____ Channel Windows If more than one AmIRC window is opened, you may select one here to pop it to front. Dialog Windows If any dialogue windows are open, you may select one here and bring it to front. Windows List... Shows the tray window where all windows are represented by a button. Hidden windows can be opened by double-clicking that window's button. Channel List Window... This will produce a window where you may list channels by min. users, pattern matching, or both. Once listed, you may list users on a channel or join it by double-clicking the channel name or selecting 'join channel' gadget. Please note that this function can cause a high load of traffic and may take a while on slow (14.4 or less) connections. Notify Window... In the Notify window you may enter nicks of users that you wish to be notified of their entering/leaving IRC. The 'check period' is how often AmIRC will check for the specified users. Add a nick to the list by clicking in the input text gadget, and typing in the nick. Delete a nick by clicking on it's entry and then click on 'Delete nick' gadget. Favorite Channels... In the Favortie Channels window you can make a list of all your favorite channels allowing you to join them with a simple double mouse-click. DCC-Send Window... Brings up the DCC-Send window where you can specify a user and a file to send to them. This window will also be opened automatically when using the 'DCC send' userbutton on the interface. 'Send Path' is the path (and filename) that will be sent to the user. Enter the name of the user in the textinput gadget at the bottom of the window. The cycle gadget next to the 'Nick' gadget selects either 'DCC Send' or 'DCC Move' protocols. See DCC section for details about these protocols. The 'Reoffer' \leftrightarrow button allows you to reoffer a (failed) file to the user. The 'Remove Job' button will remove a complete transfer or if not complete, one click will abort the send and the second click will remove it. Finally, the 'Cleanup' button removes all finished or aborted transfers from the window.

DCC-Receive Window... The DCC-Receive window is very similar to the DCC-Send window. This window will appear automatically on receiving a DCC request. The files will be downloaded to the path entered in the 'Receive Path' field. After a valid path is entered, click on an entry to receive, then click the 'Get' gadget at the bottom. You can also start the transfer by double-clicking on the entry or enabling 'Auto accept DCC send requests' in the User Modes menu. If you are trying to receive after a failed send, you may use the 'Resume' button instead of 'Get'. This will attempt to start transfer where it left off. If you wish to rename the incoming file for whatever reason, you may use the 'Rename' button. The 'Replace' button will cause the received file to replace any present versions. 'Remove Job' will abort an incoming file and remove a completed or aborted file. 'Cleanup' removes all finished or aborted transfers. See DCC DCC-Chat Window... In the DCC-Chat window you can confirm a DCC chat connection from another user. Simply select the client sending the request and click on 'Open' to make the connection. You can close the connections using 'Close'. 'Cleanup' removes all closed DCC chat connections. See DCC Raw Log Window ... The Raw Log window can be used to view the raw IRC messages as they appear before AmIRC formats them for easy reading in the AmIRC listview. Here you may also clear the log, and select when the log is active: 'Never', 'Only if window open', or 'Always'. The log Listview shows the USERHOST, Type of message, Channel Name, and message, in that order. URL Grabber Window... Any WWW URL AmIRC recognizes it will place in the URL Grabber window. From here you can select them and either send them to your browser or the clipboard. You can also clear the list. Private Msgs Window... The Private Messages window holds a history of private messages sent to you, which you can later reference or review. You can ofcourse clear the list. Info Message Window The Info Messages window displays server messages, wallops messages, and CTCP requests. Any 'Shanghai' gadgets that are activated will prevent that type of message from showing in the main channel window, even when the info window is closed. The lower part of the window shows AmIRC's Lag-O-Meter. The VU style

meter is a graphical representation of the current lag to the server. Next to the meter is the name of the server. Also shown

are the current lag, last two probes and the average of the last two lags.
Flush Buffer
This item will clear the history of the main AmIRC listview.
Save Buffer...
This item allows you to select a filename to save the history
buffer to disk.

1.15 AmIRC.guide/User Modes

Menus

User Modes Menu

Invisible? Toggles wether you're invisible in the global userlist or not. See IRC Terms . Receive Wallops? Toggles wether you will receive messages to all operators or not. See IRC Terms Receive Server Notices? Toggles wether you receive server notices or not. Marked AWAY? Marks you are AWAY. Auto rejoin on KICK? If set, will automatically attempt to reconnect you to a channel you have been kicked from. Note that if a ban was set with the kick, you will not be able to rejoin. Auto reconnect to server? If set, this will automatically attempt to reconnect you to the server if you are disconnected for any reason. Clone detection Detect wether clones are present. Oper detection Detect IRC Operators. Auto open Dialog Windows? If set, will automatically open chat window upon receipt of a

/MSG or DCC chat request. Auto accept DCC chat requests? If set, this will automatically accept DCC chat requests. It will not open a chat window for you, however. Do this by opening the DCC chat window in the Windows menu. Auto accept DCC send requests? If set, this will automatically accept DCC send requests, so downloading will start immediately. Do BEEPs? If set, AmIRC will send audio beeps (or samples, if configured in the Events page of the settings requester) for certain events. Play CTCP SOUND requests? If checked, AmIRC will acknowledge and play /CTCP sound requests, if this is configured properly. Do Color codes? Here you can enable the (in) famous colour codes

1.16 AmIRC.guide/Settings

Menus

```
Settings Menu
-----
Setup...
Calls the
        Setup window
        , allowing you to change the many settings of
    AmIRC to suit your needs.
MIMEPrefs...
Calls the MIMEPrefs program if present in the AmIRC directory or
    Prefs:. It allows you to set global MIME settings for view and
    saving files.
Dialog Window Buttons?
    If set, the AmIRC dialog window will contain 4 gadgets in the
    upper right corner. These are labelled: 'Whois', 'Ping', 'DCC
```

Chat', & 'DCC Send'. These gadgets will perform their respective functions on the user that the dialog window is opened to.
Use MIMEPrefs for viewing? If set, AmIRC uses the global MIME settings set with the MIMEPrefs program to determine what program to view the received file with.
Use MIMEPrefs for saving? If set, AmIRC uses the global MIME setting set with the MIMEPrefs program to determine whether and where to save the received file.
Single Channel Window? If set, AmIRC will only open one channel window at a time. Messages in other channels will still be shown, however, with a reference to the corresponding channel.
Load Settings Opens a requester allowing you to recall previously saved non-default AmIRC Configurations.
Load settings from default Reloads the last saved default configuration
Save Settings Saves the current configuration under the last name set in the 'Save settings as' menu item. If the settings have not previously been named, they are saved as default.
Save settings as Opens a requester allowing you to choose a filename to save the current AmIRC configuration as other than default.
Save as default Saves the current AmIRC configuration as the default start-up configuration.
Create icons? If Checked, will create icons for saved configuration files, allowing them to be selected from the Workbench.
Save Settings On Exit If checked, this item will cause AmIRC to save the current settings as default upon exiting the program.
MUI Settings Opens the MUI Prefs program for altering the MUI Configurable AmIRC configuration.

1.17 AmIRC.guide/Plugins

Menus ===== Plugins Menu

The Plugins menu shows a list of all installed AmIRC plugins. The plugins are located in the Plugins directory in the AmIRC directory. It also allows you to access any Plugin preference that may be available.

1.18 AmIRC.guide/Rexx

Menus

Rexx Menu

This menu will only be present when any ARexx scripts reside in the AmIRC/Rexx/ directory and will display them. AmIRC ARexx scripts should be named with the . amirx extension. From this menu you may execute any existing AmIRC ARexx script. See the full ARexx guide

for an indepth look on ARexx.

1.19 AmIRC.guide/Commands

```
Using the commands in AmIRC.
```

Overview

=======

AmIRC has many builtin commands. Some of these commands are processed locally, whereas others are sent to the IRC server.

Commands generally start with a '/' to differentiate them from normal text. If you want to use the / character at the start of normal text, use '//' instead.

Many commands require a channel name as a parameter. AmIRC will automatically fill in the channel name of the current window if you don't specify a channel name on your own.

For commands which require a nick name (e.g. /MSG or /OP, there are three special shortcut arguments:

The period is replaced with the nickname of the last person you have send a private message to.

The comma is replaced with the nickname of the last person who send a message to you. Be careful with this, since you might easily address the wrong person if someone sends you a message while you are still typing this command!

:

The colon is replaced with the nickname of the last person which you have addressed with a 'Nick:' prefix inside a channel.

You may easily carry a dialog with a particular user by first clicking on their username in the user list, then anytime you hit the TAB key, the input string will be set up with '/MSG <user> ', after which you may type in the message and hit return. This will work after initiating a

DCC Chat

request as well. Please note that if you have configured the user list as a separate window, you must reactivate the message window after clicking on a username.

1.20 AmIRC.guide/?

Commands

?

Usage: /? [Command]

With this command you can get a list of all available commands. When a command is added behind it, you get the correct command syntax.

Alternative: HELP EXAMPLES: /? Will show a list of all available commands /? Ping Will show the correct command syntax for the PING command: Usage:

/PING [nick]

1.21 AmIRC.guide/ADMIN

Commands

ADMIN

Usage: /ADMIN [Server]

The admin message is used to find the name of the administrator of the given server, or current server if [Server] parameter is omitted.

EXAMPLES:

1.22 AmIRC.guide/ALIAS

Commands

ALIAS

Usage: /ALIAS [Alias [Replacement, %p for alias parameters]

With ALIAS you can make an alias for frequently used terms. You can also add parameters needed for certain commands using %p.

You can also change Aliases using the Alias Window . EXAMPLES:

/ALIAS Goto Join %p You can now use: /GOTO #Test instead of /JOIN #Test

1.23 AmIRC.guide/AWAY

Commands

AWAY

Usage: /AWAY [message]

When used with the optional [message] argument, it will mark you as being away and send the message to any client sending a MSG

to you. Otherwise, it will remove a previously set away message. Related: BACK EXAMPLES: /AWAY eating dinner Will send the message '<nick> is away: eating dinner', where nick is the nickname of the user that is away. /AWAY

Will remove a previously set Away Message.

1.24 AmIRC.guide/BACK

Commands

BACK

Usage: /BACK (no arguments)

Where

AWAY

toggles between setting and resetting the Away state. This command always resets the Away state and thus no longer marks you as away.

Related:

AWAY EXAMPLES:

/BACK

Will reset the away state and no longer marks you as away.

1.25 AmIRC.guide/BAN

Commands

BAN

Usage: /BAN [channel] userhost[,userhost...]

This command will ban everyone with the specified userhost(s) from

entering the channel. With the optional channel argument you can setup a ban on a different channel than the one in which window the command is executed.

Related:

BANDEL

BANLIST

KICK

KICKBAN

QKICK

QKICKBAN EXAMPLES:

```
/BAN bill@*.microsoft.com
Will prevent a user called bill in the microsoft.com domain from
entering the channel.
```

```
/BAN Amiga bill@*.microsoft.com
Will ban user bill on microsoft.com from entering #Amiga.
```

1.26 AmIRC.guide/BANDEL

Commands

BANDEL

```
Usage: /BANDEL [channel] userhost[,userhost...]
```

```
Will remove a ban on the specified userhost(s) on the (optional) channel.
```

Related:

BAN

BANLIST

KICK

KICKBAN

QKICK

QKICKBAN EXAMPLES:

/BANDEL *!*@*microsoft.com

Will remove the ban for the microsoft.com domain.

1.27 AmIRC.guide/BANLIST

Commands

BANLIST

Usage: /BANLIST [channel] userhost[,userhost...]

Shows a list of bans currently active on the (specified) channel.

Related:

BAN

BANDEL

KICK

KICKBAN

QKICK

QKICKBAN EXAMPLES:

/BANLIST

Shows a list of all bans on the currently active channel.

1.28 AmIRC.guide/CHANNEL

Commands

CHANNEL

Usage: /CHANNEL channel[, channel[, ...]] [key[, key, ...]]

Join a channel on the IRC. If the channel doesn't exists, it is automatically created.

There are two kinds of channels: Channel names starting with an # are global channels and available on all IRC servers which are connected to the net you are currently on. Channels which begin with & are local to the chat server you are connected to.

If a channel requires a special keyword to join, you can submit this after the channel name.

AmIRC will look for a channel window which isn't currently bound to a channel. If it doesn't find one, a new window will be created and bound to this channel.

Alternative:

JOIN Related: CYCLE

LEAVE

PART

QUIT EXAMPLES:

/CHANNEL #Amiga Join the channel #Amiga

/CHANNEL #Amiga,#AmIRC Join the channels #Amiga and #AmIRC

/CHANNEL #Secret Booh Join the channel #Secret that protected with keyword Booh.

1.29 AmIRC.guide/COLOURCODES

Commands

COLOURCODES

Usage: Ctrl-C [Text Colour], [Background Colour]

Please note that this feature is not really a command, but it can be used to control the colour(s) in which a (public) text appears. Both the text and the background colour can be changed by first pressing Ctrl^C (That's the 'Ctrl' key + the 'C' key simultaneously!). followed by either one (for the text colour) or two values (text and background). In most fonts Ctrl^C is displayed as a box (unknown character). You can have multiple colour changes in a single text, all preceded by Ctrl^C. Here's a list of available colours and their respective values:

Value:	Colour:	RGB	Valı	les:
0*	White	255	255	255
1	Black	000	000	000

2	Navy	000	000	139
3	Green	000	255	000
4	Red	255	000	000
5	Maroon	139	000	000
6	Purple	160	032	240
7	Orange	255	165	000
8	Yellow	255	255	000
9	Lime	050	205	050
10	Teal	128	128	128
11	Aqua	127	255	212
12	Blue	000	000	255
13	Fuchsia	255	192	205
14	Grey	190	190	190
15	Silver	211	211	211

*Please note that background colour 0 is the standard list background colour.

EXAMPLES: ([CTRL^C] indicates pressing CTRL and C simultaneously)

This text is [CTRL^C]4 RED. When this line is sent to a channel the word RED will be displayed in.... red.

I like [CTRL^C]8,1 Colours [CTRL^C]1,0 a lot. Here the word Colours will be Yellow on a Black background.

1.30 AmIRC.guide/CONNECT

Commands

CONNECT

Usage: /CONNECT server [port [remote server]]

The CONNECT command can be used to force a server to try to establish a new connection to another server immediately. CONNECT is a privileged command and is available only to IRC Operators. If a [remote server] is given then the CONNECT attempt is made by that remote server to the given server and port.

EXAMPLES:

/CONNECT test1.irc.com Will connect test1.irc.com to the currently connected server

1.31 AmIRC.guide/CTCP

37 / 127

Commands _____ CTCP ____ Usage: /CTCP nick request CTCP or Client To Client Protocol is a standard for sending commands to other clients on IRC. Basically, CTCP messages are simply private messages that include a code to alert the receiving client (not user) to respond to the command. CTCP commands are typicaly used to get informaton from the receiving client, such as '/CTCP time', or '/CTCP version'. Even DCC sends a request via CTCP to the receiving client, asking to initiate a direct connection. Related: ME DCC SOUND TIME QUERY VERSION EXAMPLES: /CTCP Franky Version This will return the version of Franky's client: «Reply» Franky VERSION AmIRC/AmigaOS 1.118 by Oliver Wagner < \leftrightarrow owagner@vapor.com> : http://www.vapor.com/amirc/ : [#00000000] : This space for rent. Mail <ads@vapor.com> for more info. /CTCP Bert Time This will show the time set on Bert's machine: «Reply» Bert TIME Tue Jan 13 10:54:23 1998

1.32 AmIRC.guide/CYCLE

Commands

CYCLE

Usage: /CYCLE [channel]

With CYCLE you can make AmIRC automatically leave and join a (specified) channel. This can be useful when you want to check a changed usermode on a channel. When no channelname is given, the currently active channel will be 'cycled'.

Related:

CHANNEL

JOIN

LEAVE

PART EXAMPLES:

/CYCLE

Will make AmIRC leave and join the currently active channel.

1.33 AmIRC.guide/DCC

Commands

DCC

Usage: /DCC [SEND|MOVE|CHAT|SCHAT|GET|RESUME|LIST] [nick] [parameters] or: /DCC CLOSE [SEND|GET|CHAT|SCHAT] nick [parameters]

DCC or Direct Client Connection is a protocol that IRC clients can use to communicate directly with each other, bypassing the IRC server. The reason for this is to form a faster, more stable and direct connection through which users can transfer files, or send private messages.

Note that AmIRC has its own set of Highly Optimized DCC protocols built-in, and does not require external DCC utilities.

The most common use of DCC is for transferring files between two clients. The initiating client will send a message through the IRC server, telling the receiver that a connection is requested. At this time, the receiver will either accept or reject the offer for the connection. If the receiver accepts the connection, the initiating client will proceed to send the information directly to the receiver. If the connection is refused, the initiating client will simply timeout the attempt to connect. Another use of the DCC standard is DCC chat, which, like DCC Send, will send a CTCP request to the receiving client to set up a direct link. In this case, however, the purpose of the link is for users to send messages to each other. Because the messages are sent through the direct link, and do not pass through the IRC server, this method of sending messages is much more private than using the IRC's private message (

MSG) command. With AmiRC, it must be noted that a DCC Chat request will not open a dialog window for you, instead, when DCC chat is initiated and accepted, all privmsg's (

) to the receiving user will be sent through the DCC link. If you wish to have a dialog box for chatting, the best way to do this is to highlight the users's name in the userlist by clicking on it and then click on the 'Query' button below the listview. This will open a window that has several options within it. From here, you can

PING or WHOIS

MSG

the other user, or you may

initiate a 'DCC Send' or 'DCC Chat'. Starting a 'DCC Chat' from this window will allow you to carry on a dialog with the remote user through the window.

EXAMPLES:

/DCC send Franky AmIRC20.lzx Will send a request to Franky to transfer a file called AmIRC20.lzx. When Franky (auto-)accepts transfer will begin.

/DCC move Franky AmIRC20.lzx Will basically do the same as 'DCC Send' but it is capable of resuming an aborted or failed transfer. It looks in the receiving directory and if a file with the same name if found it will send a 'DCC Resume' instead of 'DCC Send'.

1.34 AmIRC.guide/DESCRIBE

Commands

DESCRIBE

Usage: /DESCRIBE nick describe-text

DESCRIBE is used to 'describe' something to another user.

Related:

ΜE

MSG EXAMPLES:

/DESCRIBE John It is nice weather here Send the following text to user John: «Describe» <nick> It is nice weather here Where <nick> is your nickname.

1.35 AmIRC.guide/DEOP

Commands

DEOP

Usage: /DEOP [channel] nick[,nick...]

Will remove the Channel Operator status of one or several users. Note that the user issueing the command needs to be Channel Operator himself.

Related:

OP EXAMPLES:

/DEOP Billy Removes Channel Operator status from a user called Billy.

/DEOP #Amiga Billy,John
 Removes Channel Operator status from users Billy and John on the
 channel #Amiga.

1.36 AmIRC.guide/EXCADD

Commands

=======

EXCADD

Usage: /EXCADD [channel] userhost[,userhost...]

With this (IRCNet specific!) command you can add exceptions to your ban

This way you can prevent a (friendly) user from being banned by you. With the optional channel argument you can setup an exception for a

different channel than the one in which window the command is executed.

Related:

BAN BANDEL BANLIST EXCDEL EXCLIST KICK KICKBAN QKICK QKICKBAN EXAMPLES: /EXCADD bill@*.microsoft.com Will add a user called bill in the microsoft.com domain to your ban exceptions, preventing you from banning him.

#Amiga.

1.37 AmIRC.guide/EXCDEL

Commands

EXCDEL

```
Usage: /EXCDEL [channel] userhost[,userhost...]
```

With this (IRCNet specific!) command you can delete exceptions to your

ban . With the optional channel argument you can remove an exception for a different channel than the one in which window the command is executed.

Related:

```
/EXCDEL bill@*.microsoft.com
   Removes a user called bill in the microsoft.com domain from your
   ban exceptions, allowing you from banning him again.
```

```
/EXCDEL Amiga bill@*.microsoft.com
Allows you to ban user bill on microsoft.com on #Amiga again.
```

1.38 AmIRC.guide/EXCLIST

Commands

EXCLIST

Usage: /EXLIST [channel]

This (IRCNet specific!) command shows you all domains that are excluded from your

bans . With the optional channel argument you can view an exceptions list for a different channel than the one in which window the command is executed.

Related:

BAN BANDEL BANLIST EXCADD EXCDEL KICK KICKBAN QKICK

QKICKBAN EXAMPLES:

/EXCLIST

Will show a list of all userhosts that are excluded from banning on the currently active channel.

/EXCLIST Amiga Will show a list of all userhosts that are excluded from banning on #Amiga.

1.39 AmIRC.guide/FINDHOST

Commands

FINDHOST

Usage: /FINDHOST [channel|ALL] userhost

With this command you can search for a user using a userhost pattern. AmIRC will return all users matching the pattern on the currently active channel. Alternatively you can specify which channel will be searched in. With the ALL argument you can search the entire network.

Related:

USERS

USERHOST

WHO EXAMPLES:

/FINDHOST *.vapor.com
Will list all users at the vapor.com domain on the currently
active channel.

/FINDHOST #Amiga *.vapor.com Shows all users at the vapor.com domain on #Amiga.

/FINDHOST all *.com Shows all users at the .com domain on the network.

1.40 AmIRC.guide/GLINE

Commands

GLINE

Usage: /GLINE [gline]

GLINE returns a list of all (partial) domains that are banned from the network. The optional parameter is used as a mask.

EXAMPLES:

/GLINE Returns all domains banned from the network.

1.41 AmIRC.guide/HELP

Commands

=======

HELP

Usage: /HELP [Command]

With this command you can get a list of all available commands. When the optional command parameter you get specific help about that command.

Alternative:

? EXAMPLES:

/HELP Will show a list of all available commands

/HELP Ping Will show additional help about the PING command.

1.42 AmIRC.guide/HIGHLITE

Commands

HIGHLITE

```
Usage: /HIGHLITE [item]
HIGHLITE can be used to light up certain texts. They will be shown in a
colour that's defined in the
                Settings
You can also change Highlighting using the
                Hilight Window
                .
Alternative:
                HILITE
                Related:
                UNHIGHLITE
                UNHILITE
                EXAMPLES:
/HIGHLITE MyName
     Whenever AmIRC encounters MyName it will be shown in the Hilighted
     colour.
1.43 AmIRC.guide/HILITE
                Commands
=======
HILITE
____
Usage: /HILITE [item]
HIGHLITE can be used to light up certain texts. They will be shown in a
colour that's defined in the
                Settings
```

You can also change Highlighting using the Hilight Window

Alternative:

HIGHLITE Related: UNHIGHLITE

UNHILITE EXAMPLES:

/HILITE MyName

Whenever AmIRC encounters MyName it will be shown in the Hilighted colour.

1.44 AmIRC.guide/IRCNAME

Commands

IRCNAME

Usage: /IRCNAME [new name]

IRCNAME is used to to give yourself a nickname or change your current one. If the chosen nick is already in use, you wil be notified of this and prompted for a new nick.

Alternative:

NICK EXAMPLES:

/IRCNAME Phalanx Sets your nickname to 'Phalanx'

1.45 AmIRC.guide/IGNORE

Commands

IGNORE

Usage: /IGNORE [userhost|nick [[+|-]TEXT [+|-]PRIV [+|- -]CTCP
[+|-]ALL]]

IGNORE can be used to ignore messages coming from an annoying user. You can set different levels of ignoring:

text - This will block only text. priv - This will block all private messages. ctcp - You won't reveive any CTCP request. all - All traffic will be blocked.

Related:

SILENCE

UNIGNORE EXAMPLES:

/IGNORE bill@user1.microsoft.com +priv

```
This will ignore all PrivMsgs (
MSG
) sent by the offending user.
/IGNORE Bill -ctcp
Removes CTCP ignores of Bill
```

1.46 AmIRC.guide/INVADD

Commands

INVADD

Usage: /INVADD [channel] userhost[,userhost...]

With this (IRCNet specific!) command you can add users to your auto-invite list. This way you automatically invite them to a

(specified) channel whenever they log onto IRCNet. With the optional channel argument you can setup an auto-invite for a different channel than the one in which window the command is executed.

Related:

INVDEL

INVLIST

INVITE EXAMPLES:

/INVADD bill@*.microsoft.com

Will add a user called bill in the microsoft.com domain to your auto-invite list causing you to automatically invite him when he logs on.

/INVADD Amiga bill@*.microsoft.com Will make you auto-invite user bill on microsoft.com to #Amiga.

1.47 AmIRC.guide/INVDEL

Commands

======

INVDEL

Usage: /INVDEL [channel] userhost[,userhost...]

With this (IRCNet specific!) command you can remove users from your auto-invite list. With the optional channel argument you can remove an auto-invite for a different channel than the one in which window the command is executed.

Related:

INVADD

INVLIST

INVITE EXAMPLES:

/INVDEL bill@*.microsoft.com
 Removes a user called bill in the microsoft.com domain from your
 auto-invite list.

/INVDEL Amiga bill@*.microsoft.com Stops you from auto-inviting user bill on microsoft.com to #Amiga.

1.48 AmIRC.guide/INVLIST

Commands

=======

INVLIST

Usage: /INVLIST [channel]

This (IRCNet specific!) command shows you all domains that are are automatically invited

to the (specified)channel. With the optional channel argument you can view the auto-invites for a specific channel.

Related:

INVADD

INVDEL

INVITE EXAMPLES:

/INVLIST

Will show a list of all userhosts that are automatically invited to the currently active channel.

/INVLIST Amiga

Will show a list of all userhosts that are automatically invited

to #Amiga.

1.49 AmIRC.guide/INVITE

Commands

INVITE

Usage: /INVITE [channel] nick

Related:

INVADD

INVDEL

INVLIST EXAMPLES:

/INVITE freddie #AmIRC Invites 'freddie' to join #AmIRC.

1.50 AmIRC.guide/INFO

Commands

INFO

Usage: /INFO [server]

The INFO command is required to return information which describes the server: its version, when it was compiled, the patchlevel, when it was started, and any other miscellaneous information which may be considered to be relevant. If no parameter is submitted the currently connected server will be shown.

EXAMPLES:

/INFO Will return information about the server the user is currently connected to.

1.51 AmIRC.guide/ISON

Commands

=======

ISON

```
Usage: /ISON nick [nick [nick [...]]]
```

Quickly returns the user's nick if it is found, does nothing if it is not.

Related:

WHOIS

WHOWAS

WHO EXAMPLES:

```
/ISON Kenneth
Returns: '<ISON>Kenneth', if nick 'Kenneth' is found on the server.
```

1.52 AmIRC.guide/JOIN

Commands

JOIN

Usage: /JOIN channel[, channel[, ...]] [key[, key[, ...]]]

Join a channel on the IRC. If the channel doesn't exists, it is automatically created.

There are two kinds of channels: Channel names starting with an # are global channels and available on all IRC servers which are connected to the net you are currently on. Channels which begin with & are local to the chat server you are connected to.

If a channel requires a special keyword to join, you can submit this after the channel name.

AmIRC will look for a channel window which isn't currently bound to a channel. If it doesn't find one, a new window will be created and bound to this channel. Alternative:

CHANNEL Related: CYCLE LEAVE PART QUIT EXAMPLES: /JOIN #Amiga Join channel #Amiga

/JOIN #Amiga,#AmIRC Join channels #Amiga and #AmIRC

```
/JOIN #Secret Booh
Join channel #Secret with keyword Booh.
```

1.53 AmIRC.guide/KICK

Commands

KICK

```
Usage: /KICK [channel] nick [reason]
```

Forcibly removes a user from the named channel. The user sending the /KICK command must be a Channel Operator of the channel. If the optional [reason] is given, it will be shown as the reason for the kick.

Related:

BAN BANDEL BANLIST KICKBAN QKICK QKICKBAN EXAMPLES: /KICK #AmIRC Freddie Take it outside!
 Forces 'Freddie' from channel #AmIRC with the reason 'Take it
 outside!'.

1.54 AmIRC.guide/KICKBAN

Commands

KICKBAN

Usage: /KICKBAN [channel] nick [reason]

Forcibly removes a user from the named channel and prevents him from re-entering with a ban. The user sending the /KICKBAN command must be a channel operator of the channel. If the optional [reason] is given, it will be shown as the reason for the kick & ban.

Related:

BAN BANDEL BANLIST KICK QKICK QKICKBAN EXAMPLES:

/KICKBAN #AmIRC Freddie You dirty pirate!
 Forces 'Freddie' from channel #AmIRC with the reason 'You dirty
 pirate!' and cannot re-enter because he's banned.

1.55 AmIRC.guide/KILL

Commands =====

KILL

Usage: Usage: /KILL nick comment

This command allows IRC Operators to disconnect abusive users from the network.

EXAMPLES:

```
/KILL Pierat You're not wanted here!
Disconnects user Pierat with the reason 'You're not wanted here!'
```

1.56 AmIRC.guide/LASTLOG

Commands

LASTLOG

Usage /LASTLOG [undefined]

Searches back through AmIRC's buffer and displays all occurances of the specified text.

EXAMPLES:

```
/LASTLOG amirc
Searches and displays all lines from the buffer containing the
text 'amirc'.
```

1.57 AmIRC.guide/LEAVE

Commands

LEAVE

Usage: /LEAVE [Channel[, Channel[, ...]]

Leaves a channel. If you don't give a channel name as a parameter, the channel currently bound to the window in which in the command is entered will be left.

Alternative:

PART Related: CHANNEL CYCLE JOIN EXAMPLES: /LEAVE Leave the channel currently bound to this window.

```
/LEAVE #AmigaGER
Leave channel #AmigaGER.
```

1.58 AmIRC.guide/LINKS

Commands

LINKS

```
Usage: /LINKS [pattern]
```

LINKS shows which server of the IRC network is connected to which other server. The optional [pattern] can be used to limit the shown server with a mask.

Related:

MAP EXAMPLES:

/LINKS *.*com Shows all links with servers ending with .com

1.59 AmIRC.guide/LIST

Commands

LIST

```
Usage: /LIST [pattern] [MIN minusers]
```

Shows the

Channel List window in which the accessable channels are listed. The optional [pattern] is used as a mask and the MIN minusers parameter prevents channels with less users to be displayed.

EXAMPLES:

/LIST

Returns a list of all public channels on available. Note that

'secret' channels are only shown when the user has actually joined them. /LIST br* 6 Returns all channels starting with br and minimal 6 users present.

1.60 AmIRC.guide/LOG

Sets the path and name of the logfile.

1.61 AmIRC.guide/LUSERS

```
Commands
```

/LOG <filename>

LUSERS

Usage: /LUSERS (no arguments)

Returns information on the current network. Specifically on the number of users present.

EXAMPLES:

/LUSERS

This will return information on the users on the current network.

1.62 AmIRC.guide/M

Commands _____ М Usage: /M nick_or_channel[,nick,...] text Sends a Private Message to one or more users. Note that this is different from a /DCC Chat , in that /M (PRIVMSG) is sent through the IRC server to the recipient. Note that the TAB key will cycle back and forth through the users who have /MSG'ed you. This will appear in the input string gadget, and you may simply add your message after it. Alternative: MSG RMSG EXAMPLES: /M Kenneth Heya Dude! How's Florida? Send the message: "Heya Dude! How's Florida?" to user Kenneth.

Sends the message "I am in Pittsburgh" to Kenneth and Aerosoul.

1.63 AmIRC.guide/MAP

Commands

/M Kenneth, Aerosoul I am in Pittsburgh

MAP

Usage: /MAP [server]

MAP returns a map of all servers the network consists of. The optional parameter is used as a mask

Related:

LINKS EXAMPLES:

/MAP

Shows a map of all servers

/MAP *.*.com
 Shows a map of all servers ending with com.

1.64 AmIRC.guide/ME

Commands

ME __

Usage: /ME Action

ME sends a

CTCP Action to the channel.

Related:

DESCRIBE EXAMPLES:

1.65 AmIRC.guide/MODE

Commands

MODE

Usage: /MODE [channel] [+-modes [modeparms]]

MODE is used to change the modes of a channel or a user. Only Channel Opertators can change Channel Modes. Here's a list of all available modes:

- o Remove Channel Operator status. Note that you cannot set ChanOp status $\, \leftrightarrow \,$ using +o.
- p Private channel; Not visible in the Channel List.
- s Secret channel; Not visible until you enter.
- i Invite-only channel; Only accessible on invitation.
- t Topic protection; Settable by Channel Operators only.
- n No Messages; No messages from clients outside channel.
- m Moderated channel; Only ChanOps and people with VOICE

can send public messages. 1 - Limit: Set maximum number of users allowed on channel. b - Ban: Set a ban to keep users out. v - Voice: Give/take the ability to speak on a Moderated channel. k - Keyword: Set a channel keyword (password). Related: BAN BANDEL INVITE OP DEOP TOPIC VOICE UMODE UNVOICE EXAMPLES: /MODE #AmIRC +tm Sets topic protection and makes channel #AmIRC moderated. /MODE #AmIRC -o Sarek Removes channel operator status from user 'Sarek' on channel #AmIRC.

```
/MODE #AmIRC +1 50
Sets limit of 50 users on #AmIRC.
```

/MODE #AmIRC -1 Removes the limit form #AmIRC.

1.66 AmIRC.guide/MOTD

Commands ====== MOTD

Usage: /MOTD (no arguments)

This returns the Message Of The Day of the server currently connected to.

EXAMPLES:

/MOTD

Shows the current Message Of The Day of the server.

1.67 AmIRC.guide/MSG

Commands

MSG (PRIVMSG)

Usage: /MSG nick_or_channel[, nick, ...] text

Sends a Private Message to one or more users. Note that this is different from a

/DCC Chat

, in that a /MSG (PRIVMSG) is sent thru the IRC server to the recipient. Note that the TAB key will cycle back and forth through the users who have /MSG'ed you. This will appear in the input string gadget, and you may simply add your message after it.

Alternatives:

М

RMSG EXAMPLES:

- /MSG Kenneth Heya Dude! How's Florida? Send the message: "Heya Dude! How's Florida?" to user 'Kenneth'.
- /MSG Kenneth, Aerosoul I am in Pittsburgh Sends the message "I am in Pittsburgh" to Kenneth and Aerosoul.

1.68 AmIRC.guide/NAMES

Commands

Names

```
Usage /NAMES channel[, channel[, ...]]
```

Gives a list of nicknames on any channel visible to the user(not secret or private, or one actually joined by the user performing the command).

EXAMPLES:

/NAMES #AmIRC,#amigaGER
Will list all users on channels #AmIRC and #amigaGER, provided the
channels are visible to the user.

/NAMES

```
Will return a list of all visible channels and users (Strongly Discouraged!)
```

1.69 AmIRC.guide/NICK

Commands

NICK

Usage: /NICK NewNick

NICK is used to to give yourself a nickname or change your current one. If the chosen nick is already in use, you wil be notified of this and prompted for a new nick.

Alternative:

IRCNAME EXAMPLES:

/NICK Phalanx Sets your nickname to 'Phalanx'

1.70 AmIRC.guide/NOTE

Commands

NOTE

Usage: /NOTE [undefined]

This command is still a leftover from the past and is not supported anymore by any current servers.

1.71 AmIRC.guide/NOTICE

Commands

NOTICE

Usage: /NOTICE nick_or_channel[,nick,...] text

/NOTICE is usually used by Bots or clients being controlled by scripts. /NOTICE messages must never be responded to by an automatic reply.

See

MSG for syntax examples.

1.72 AmIRC.guide/NOTIFY

Commands

NOTIFY

Usage: /NOTIFY [nick]

With NOTIFY you can specify the nick of a user you want to be notified of when he joins IRC. You can set the notification event in the

Events Window of the Settings. When no nick is submitted you will be presented with the NOTIFY Window

EXAMPLES:

/NOTIFY Bert You will be notified when user Bert is joining the IRC network.

1.73 AmIRC.guide/OP

Commands

OP

```
Usage: /OP [channel] nick[,nick...]
With this command you can set the Channel Operator status of a user or
several users at once.
```

EXAMPLES:

```
/OP Bert,Franky
    Sets the Channel Operator status for users Bert and Franky
```

1.74 AmIRC.guide/OPER

Commands

OPER

Usage: /OPER user password

Allows users to set their IRC Operator status. You will need to know the password to become IRC Operator. Using /OPER without it's parameters will present you with a requester where you can enter your username and password.

EXAMPLES:

```
/OPER Bill Bucks
Sets user Bill IRC Operator status using password Bucks.
```

1.75 AmIRC.guide/PART

Commands

PART

```
Usage: /PART [Channel[,Channel...]]
```

Leaves a channel. If you don't give a channel name as a parameter, the channel currently bound to the window in which in the command is entered will be left.

Alternative:

LEAVE Related: CHANNEL

CYCLE

JOIN EXAMPLES:

/PART

Leave the channel currently bound to this window.

/PART #AmigaGER

Leave channel #AmigaGER.

1.76 AmIRC.guide/PING

Commands

PING

Usage: /PING [nick]

Sends a

/CTCP Ping to the user with the submitted nick and return the time it took to receive it back. If no nick is given the PING will be sent to the server.

Related:

CTCP EXAMPLES:

1.77 AmIRC.guide/QKICK

Commands

QKICK

Usage: /QKICK [channel] nick[,nick...] [reason]

This command is use to kick or ban a person and presents you with a window in which you can select the hostmask use for the ban. Pressing either the Kick or Kick&Ban button will kick(ban) the user. Here's the hostmasks offered:

1.78 AmIRC.guide/QKICKBAN

Commands

QKICKBAN

Usage: /QKICKBAN [channel] nick[,nick...] [reason]

This command is use to kick or ban a person and presents you with a window in which you can select the hostmask use for the ban. Pressing either the Kick or Kick&Ban button will kick(ban) the user. Here's the hostmasks offered:

nick!*user@host.do.main : Bans a specific user with a specific nick. *!*@*.do.main : Ban all users of do.main. *!*user@host.do.main : Ban a user with a specific host. *!*@ip1.ip2.ip3.* : Numerical hostmask, banning all users in a domain.

Alternative:

QKICK Related: BAN BANDEL BANLIST KICK KICKBAN EXAMPLES:

/QKICKBAN

You will be presented with a Kick/Ban window

1.79 AmIRC.guide/QUERY

Commands

QUERY

Usage: /QUERY nick

With this command you can open a Query window. From here, you can PING or WHOIS the other user, or you may inititate a 'DCC Send' or 'DCC Chat'. Starting a 'DCC Chat' from this window will allow you to carry on a dialog with the remote user through the window.

EXAMPLES:

```
/QUERY Hero
Will open a Query window with user Hero.
```

1.80 AmIRC.guide/QUIT

Commands

QUIT

Usage: /QUIT [Quit message]

Used to end an IRC session. The optional [Quit message] is the text that will be displayed upon quitting.

Related:

SERVER EXAMPLES:

/QUIT Gone to have lunch

Will quit AmIRC and send the text 'Gone to have lunch' to all joined channels.

1.81 AmIRC.guide/QUOTE

Commands

QUOTE

Usage: /QUOTE Raw_data_to_send_to_IRC_server

Sends text directly to the IRC server without any further processing. Warning: Don't even think about using this command without interior knowledge of the IRC protocol, or you might run into severe trouble. See 'RFC 1459' for a description of the IRC protocol.

Alternative:

RAW EXAMPLES:

/QUOTE JOIN #IRC-Heros Send the string JOIN #IRC-Heros directly to the IRC server.

1.82 AmIRC.guide/RAW

Commands

RAW

Usage: /RAW Raw_data_to_send_to_IRC_server

Sends text directly to the IRC server without any further processing. Warning: Don't even think about using this command without interior knowledge of the IRC protocol, or you might run into severe trouble. See 'RFC 1459' for a description of the IRC protocol.

Alternative:

QUOTE EXAMPLES:

/RAW JOIN #IRC-Heros Send the string JOIN #IRC-Heros directly to the IRC server.

1.83 AmIRC.guide/RECONNECT

Commands

RECONNECT

Usage: /RECONNECT

This command will reconnect you to the current server. It is the same as the menu item and can be useful when a connection is either timed out or lagging.

EXAMPLES:

/RECONNECT

Will reconnect you to the current server.

1.84 AmIRC.guide/REHASH

Commands

REHASH

Usage: /REHASH (no arguments)

The rehash message can be used by the operator to force the server to re-read and process its configuration file. It's can only be used by IRC Operators.

EXAMPLES:

/REHASH

Will cause the IRC server to reread it's configuration file.

1.85 AmIRC.guide/RESTART

Commands =====

RESTART

Usage: /RESTART (no arguments)

This command is used to reset the IRC server. Note that this command can only be used by IRC Operators.

EXAMPLES:

/RESTART Will reset the IRC server

1.86 AmIRC.guide/RMSG

Commands

RMSG

Usage: /RMSG nick_or_channel[,nick,...] text

Sends a Private Message to one or more users. Note that this is different from a

/DCC Chat , in that /M (PRIVMSG) is sent through the IRC server to the recipient. Note that the TAB key will cycle back and forth through the users who have /MSG'ed you. This will appear in the input string gadget, and you may simply add your message after it.

Alternative:

М

MSG EXAMPLES:

/RMSG Kenneth Heya Dude! How's Florida? Send the message: "Heya Dude! How's Florida?" to user 'Kenneth'.

/RMSG Kenneth, Aerosoul I am in Pittsburgh Sends the message "I am in Pittsburgh" to Kenneth and Aerosoul.

1.87 AmIRC.guide/RX

Commands

RX

Usage: /RX rxcommand [parms]

This command is used to start any of the Arexx commands that are in AmIRC's Rexx directory. A complete Arexx

guide is also available.

Related:

RXRETURN EXAMPLES:

/RX leave

Will start the Arexx command 'Leave.amirx' if present.

1.88 AmIRC.guide/RXRETURN

Commands

RXRETURN

Usage: /RXRETURN Command [Rest]

/RXRETURN is only useful to ARexx script authors. It will cause any pending GETREXXLINE commands to immediately return with the arguments given to it."

Related:

RX

1.89 AmIRC.guide/SERVER

Commands

=======

SERVER

Usage: /SERVER [server [port [password]]]

You can use this command to connect to a different server or to get information about the currently connected server.

Related:

QUIT EXAMPLES:

/SERVER irc.server.com Connects you to the server irc.server.com

/SERVER

Shows current connection information

1.90 AmIRC.guide/SILENCE

Commands _____ SILENCE _____ Usage: /SILENCE [[+|-]nick|userhost] SILENCE can be used to block all CTCP traffic from a certain user or userhost. Meaning for instance that no MSG or DCC CHAT will be received from that user. Related: IGNORE UNIGNORE EXAMPLES: /SILENCE Shows a list of all currently silenced users. /SILENCE +Bill Will silence user Bill /SILENCE -Friend Will remove Friend from the Silence list.

1.91 AmIRC.guide/SOUND

Commands ======= SOUND -----Usage: /SOUND soundfile[.wav] action_text

This command can be used to have all clients on a channel play a certain sound. Please note that the sound file must be present on the

user's system to be able to play it, so don't use this randomly as nobody will hear a thing when the submitted filename is not found.

EXAMPLES:

/SOUND Burp Will play the soundfile Burp.wav on all user's system, if found! /SOUND Burp Excuse me! Will play the soundfile and send the text 'Excuse me!' with it.

1.92 AmIRC.guide/SQUIT

Commands =====

SQUIT

Usage: /SQUIT server

This command is used to disconnect a server from the network. Note that only IRC Operators have access to this command.

EXAMPLES:

```
/SQUIT irc.server.com
Will quit server irc.server.com
```

1.93 AmIRC.guide/STATS

Commands

STATS

Usage: /STATS [server] [query]

The STATS command is used to query statistics of certain server. If the [server] parameter is omitted, only the end of stats reply is sent back. The implementation of this command is highly dependent on the server which replies, although the server must be able to supply information as described by the queries below (or similar).

The currently supported queries are:

c - Returns a list of servers which the server may connect to or allow ↔
 connections
from.
h - Returns a list of servers which are either forced to be treated as leaves ↔
 or
 allowed to act as hubs.

i - Returns a list of hosts which the server allows a client to connect from.
k - Returns a list of banned username/hostname combinations for that server.
l - Returns a list of the server's connections, showing how long each ↔ connection
has been established and the traffic over that connection in bytes and ↔ messages
for each direction.
m - Returns a list of commands supported by the server and the usage count ↔ for
each if the usage count is non zero.
o - Returns a list of hosts from which normal clients may become operators.
y - Show Y (Class) lines from server's configuration file.
u - Returns a string showing how long the server has been up.

EXAMPLES:

```
/STATS irc.server.com u
Shows how long server irc.server.com has been up
```

1.94 AmIRC.guide/SUMMON

Commands

SUMMON

```
Usage: /SUMMON user
```

The SUMMON command can be used to give users who are on a host running an IRC server a message asking them to please join IRC. This message is only sent if the target server (a) has SUMMON enabled, (b) the user is logged in and (c) the server process can write to the user's tty (or similar).

EXAMPLES:

```
/SUMMON John
Will ask user John to join IRC.
```

1.95 AmIRC.guide/TIME

Commands

TIME

Usage: /TIME [server]

Returns the local time from the server. If the optional [server] argument is given, then that servers local time will be returned.

EXAMPLES:

/TIME irc.pitt.edu Returns the local time from server irc.pitt.edu.

1.96 AmIRC.guide/TOPIC

Commands

TOPIC

Usage: /TOPIC [channel] [New Topic]

The topic command alone will display the channels topic. If the optional [New Topic] argument is given, the topic will be changed to the argument given, provided that the topic is not protected, or the user issuing the command is an operator on the channel.

Related:

MODE EXAMPLES:

/TOPIC #AmIRC Will display the current topic on #AmIRC.

/TOPIC #AmIRC Amigas Rule! Will replace the current topic of #AmIRC with the topic 'Amigas Rule'

1.97 AmIRC.guide/TRACE

Commands

TRACE

Usage: /TRACE [server|nick]

TRACE is used to find the route to specific server. If the parameter is omitted, it will return which servers the current server has a direct connection to. If the destination given is a nickname, only a reply for that nickname is given. If the destination is an actual server, then the destination server is required to report all servers and users which are connected to it, although only operators are permitted to see users present.

EXAMPLES:

```
/TRACE Bill
Traces connection to user Bill.
```

1.98 AmIRC.guide/UMODE

Commands

UMODE -----Usage: /UMODE [usermodes] UMODE is used to set your own usermodes. The available options are: o - Chan Op: Sets/Takes Channel Operator status i - Invisible: Sets Visible/Invisible (in global userlist). w - Wallops: Allows receiving of texts sent to all Operators. s - Server Notices: Allows receiving of Server Notices. Related: MODE EXAMPLES: /UMODE i

Makes you invisible to the global userlist.

1.99 AmIRC.guide/UNHIGHLITE

Commands

=======

UNHIGHLITE

Usage: /UNHIGHLITE [item]

HIGHLITE can be used to light up certain texts. They will be shown in a colour that's defined in the Settings

You can also change Highlighting using the Hilight Window

.

Alternative:

UNHILITE Related: HIGHLITE HILITE EXAMPLES:

/UNHIGHLITE MyName Will remove MyName from the Highlight List.

1.100 AmIRC.guide/UNHILITE

Commands

UNHILITE

HIGHLITE can be used to light up certain texts. They will be shown in a colour that's defined in the Settings

You can also change Highlighting using the Hilight Window

.

Alternative:

UNHILITE Related: HIGHLITE

HILITE Usage: /UNHILITE [item]

EXAMPLES:

/UNHILITE MyName Will remove MyName from the Highlight List.

1.101 AmIRC.guide/UNIGNORE

Commands

UNIGNORE

```
------
Usage: /UNIGNORE [userhost|nick]
Removes the Ignore state of a user. Will show current ignores when no
argument is submitted.
Related:
IGNORE
SILENCE
EXAMPLES:
/UNIGNORE
Shows a list of all currently ignored users
/UNIGNORE Franky
```

```
Will remove all ignores on Franky
```

1.102 AmIRC.guide/UNVOICE

Commands

UNVOICE

```
Usage: /UNVOICE [channel] nick[,nick...]
```

Will remove a user's Voice status. You can specify a certain channel and submit multiple users.

Related:

VOICE EXAMPLES:

```
/UNVOICE Boy
Will remove the Voice status of Boy
```

1.103 AmIRC.guide/UPING

Commands

UNPING

Usage: /UPING host

UPING is used by IRCops to ping a certain host. Mainly used for debugging the network and see if connections are alive.

EXAMPLES:

```
/UPING irc.network.com
Send a Ping packet to irc.network.com.
```

1.104 AmIRC.guide/USERS

Commands

=======

USERS

Usage: /USERS [host]

The USERS command returns a list of users logged into the server in a similar format to who, rusers and finger. This command is frequently disabled for security related reasons.

Related:

FINDHOST

USERHOST

WHO EXAMPLES:

/USERS *.microsoft.com Will show all user connected to *.microsoft.com.

1.105 AmIRC.guide/USERHOST

Commands

USERHOST

Usage: /USERHOST nick[,nick[,...]]

Returns the login@domain for the specified nickname(s). Up to five nicknames may be specified, each separated by a <space>.

Related:

FINDHOST

USERS

WHO EXAMPLES:

/USERHOST DuRaN Returns: DuRaN is DuRaN@calci.amiganet.pgh.net

1.106 AmIRC.guide/VERSION

Commands

VERSION

Usage /VERSION [nick|server]

Returns the version of the server's software. If the optional [server] argument is given, returns the version of the specified server's software. When a user's nick is given instead it will return the user's client software version and info.

EXAMPLES:

```
/VERSION *.edu
   Returns server version information for all servers matching
   '*.edu'.
```

/VERSION Franky Will return information and version of Franky's client software.

1.107 AmIRC.guide/VOICE

Commands ======= VOICE -----Usage /VOICE [channel] nick[,nick...] You can give a user a Voice with this command. A voice is needed on a Moderated channel to be able to speak. (See Channel Modes for details).

Related:

UNVOICE EXAMPLES:

/VOICE Sinatra Gives a Voice to user Sinatra.

1.108 AmIRC.guide/WALLOPS

Commands ======

WALLOPS

Usage /WALLOPS text_to_broadcast

Sends a text to all Operators who have 'Receiving WALLOPS' enabled. This command is mainly used by servers.

EXAMPLES:

```
/WALLOPS Greeting to you all!
Sends the text 'Greeting to you all!' to all Operators.
```

1.109 AmIRC.guide/WHO

Commands

=======

WHO

Usage: /WHO channel|pattern

Returns a generated list of all users matching the criteria passed to the command, i/e. everyone at a particular channel, or matching a particular pattern.

Related:

FINDHOST

USERS

USERHOST EXAMPLES:

/WHO *.cmu.edu Will list all users at the cmu.edu domain.

```
/WHO #Amiga
Shows all users on #Amiga.
```

1.110 AmIRC.guide/WHOIS

Commands

WHOIS

```
Usage: /WHOIS nick[,nick[,...]]
```

Returns information about the specified user or users, that you are allowed to see.

EXAMPLES:

```
/WHOIS Phalanx
Returns available information about user 'Phalanx'.
```

1.111 AmIRC.guide/WHOWAS

Commands

WHOWAS

Usage /WHOWAS nick[,nick[,...]]

Returns information on a nick that no longer exists, due to the user leaving the server or changing their nick.

EXAMPLES:

```
/WHOWAS Aerosoul
Checks for and returns available information on the nick
'Aerosoul'.
```

1.112 AmIRC.guide/Configuration

```
Customizing your environment
```

Overview

Now that you have AmIRC running, you may want to get it to operate the way you want it to, and to look pleasing as well. This is achieved through both the MUI preferences and AmIRC's Menu options.

MUI Preferences Changing MUI Settings

AmIRC Setup Changing AmIRC Setup

1.113 AmIRC.guide/MUI Preferences

MUI Settings ******

Changing MUI Settings

Most of the configuration dealing with how AmIRC's GUI appears can be customized with MUI. Check the MUI Settings... entry under the Settings menu. This will pop up MUI's interface, allowing you to setup AmIRC's MUI Prefs, without disturbing any of your other MUI configurations. Read the documentation for MUI to learn more about the operation of MUI Preferences.

1.114 AmIRC.guide/AmIRC Setup

AmIRC Configuration

* * * * * * * * * * * * * * * * * * *

Customizing your environment

Most of the setup functions appear in the Setup entry under the Settings menu. Here you will get a window that will allow you to access several pages that deal with configuring AmIRC.

1.115 AmIRC.guide/Messages

```
AmIRC Configuration
Messages Page
=============
Misc Messages
_____
CTCP Userinfo
    The text in this string is what will be returned to a user who
    sends
              /CTCP userinfo
               to your client.
KICK Reason
    If you are a channel operator and
              KICK
               another user from the
    Channel, this text will appear as the reason for the /KICK.
Quit Messages
_____
Exit
```

This will appear to users in the channel when you exit AmIRC.

New Server This text will appear to users in the channel when you select Select Server in the AmIRC menu, and pick a new server to connect to. System reset This is the text to appear if you reboot your amiga (Crtl-Amiga-Amiga) while connected to a server. AWAY Messages Default This is the text that will appear when you are set AWAY by selecting the Marked Away? item in the User Modes menu or using the AWAY command AutoAWAY Text that appears when you are automatically set away due to inactivity. Timeout This sets how much time will pass before AmIRC assumes you are away from the computer and marks you as AWAY. If set to 0 (Zero), timeout will be disabled.

UnAWAY

This cycle gadget allows you to choose the conditions of which AmIRC will automatically set you to Not AWAY.

1.116 AmIRC.guide/Actions

AmIRC Configuration

* * * * * * * * * * * * * * * * * * *

Actions Page

Action buttons

The main part of this window consists of a listview containing the Label and Operation for all currently set up action buttons that appear beneath the userlist in AmIRC's main window. You can specify up to 96 action buttons. They can contain any IRC action, much like a macro. As AmIRC doesn't allow configurable function keys to act as macros, these buttons are preset for CTCP

, DCC

and MODE operations. Selecting an action from the listview will place it in the gadgets below for editing. Label: This is the label that will appear on the action button. Operation: This is the operation that is executed when the action button is pressed. This can be anything you can enter in the channels input gadget. The bottom of the page contains a list with valid placeholders that will be replaced when the operation is executed. Number of button pages This slider determines how many button pages there will be. Allowing you to seperate the action buttons into different pages so they won't take up too much space on the screen. Each page has a tab that allows it to be selected. The actions can be sorted in the list by dragging and dropping allowing you to determine the content of each button page. Add New Action With this button a new action will be added to the list. Delete Action With this button the currently selected action will be removed from the list. These actions can also be accessed by clicking the right mouse button after selecting a users nick from the userlist. Special ____ On this page you can set some special actions: Userlist doubleclick This action will be performed when you doubleclick on a nick in the channel's userlist. Nick button This action will be performed when you click on the button containing your own nick. The bottombar shows all valid placeholders for these actions which will be replaced when the operation is executed.

1.117 AmIRC.guide/Events

AmIRC Configuration

Events Page _____ Here you may define certain actions to take place upon incoming events. These actions can be as simple as a warning beep from your Amiga, or a complex and powerful Rexx command. The following text first explains the functions of the columns of this page, and then goes on to explain what each event is. Columns Event The particular event for the action to take place on. Deiconify If AmIRC is iconified, this will uniconify and bring to front the AmIRC window on the occurence of the event. Beep This will perform a system beep on the occurence of the event Sound If a sound sample is preferred for the event, you may use the requester gadget to pick a sound to play instead of the system beep. Please Note, AmIRC uses the DataTypes of OS 3.x for sounds, and you will not be able to use this feature under OS 2.x. Vol This sets the volume for the sound sample. The valid range for the volume is 0 - 64. This is a slider gadget. The small gadget just to the left of this silder gadget can be used to test the selected soundfile. Rexx Command Here you may configure a Rexx script to be run on the occurence of the event. Events ____ Any Message This event occurs on any incoming public message. Private Msg This event occurs when you receive an incoming private MSG or DCC Chat message. Notice

This event occurs when an operator sends out a NOTICE CTCP request This event occures when your client receives any CTCP request. (For example /CTCP Time, or /CTCP Version) DCC request This event occurs on receiving a DCC file transfer request or chat request. Join This event occurs when anyone joins the channel you are currently on. Kick This event occurs when anyone is kicked from the channel you are currently on. Mode change This event occurs when the channel mode is changed for the channel you are currently on. E.g. If someone is /OP ed or /DeOPed, or if the channel is made private, etc. ISON Notify This event occurs when AmIRC 'sees' a user that is configured in your Notify list. Connection This event occurs when AmIRC makes a connection to an IRC server. Invite This event occurs when another user invites you to join a channel that is currently set to MODE Invite Only. Highlite This even occurs upon receiving text that is configured in the Hilite section of the Lists setup.

1.118 AmIRC.guide/Lists

AmIRC Configuration

Lists Page

Alias Page

Here you can create aliases, or shortcuts for complex IRC commands. The main part of the page is taken up by the listview containing all currently set up aliases. You can modify them by selecting them.

Add New Alias With this button you can add new aliases.

Delete Alias With this button you can remove the currently selected alias from the list.

The bottombar contains an example template. %p will be replaced by any arguments that you use when issueing the alias.

Ignore Page

Here you can set which users, if any, you want to ignore , and what kind of messages from them to ignore. The main part of the page consists of the listview displaying all current ignores. You can modify them by selecting them.

Ignore Text When this item is checked any public message send by the user will be ignored.

Ignore PrivMsgs When this item is checked you won't see any MSG from the user.

Ignore CTCPs When this item is checked you won't recieve any CTCP request from

the user.

Add Ignore

With this button a new ignore will be added to the list.

Delete Ignore This button will remove a selected ignore from the list.

Hilite Page

Here you may set certain text to be highlighted in order to get your attention if that text appears. The main part of the page is taken up by the listview showing all currently set up patterns. You may edit any entry by selecting it.

Add New Hilite pattern

With this button you can add a new pattern to the list. You may set text to match the Nick, Userhost, or any keyword enclosed in double quotes. The Hilite patterns will ignore a pattern it recognizes if it was input by you, but will be activate on the pattern from other users.

Pattern Definitions:

Nick

This will watch the AmIRC listview for the nick that you specify, and highlight the text for that users message. The 'Nick' entry does not require double quotes.

Userhost

This will watch for messages that originate from a particular Userhost, and highlight the text for that message. Userhost entries may contain wildcards. Examples:

fred!fdoe@doel.powernet.edu
 This will highlight only messages from fred at that
 particular address.

fred!*@*

This will highlight messages from anyone named fred, regardless of address or login name.

Fred!*@*.powernet.edu

This will highlight messages from anyone named fred on any machine on powernet.edu

!@doel.powernet.edu
This will highlight any messages from anyone on the doel
machine at powernet.edu

!@*

This will highlight any messages from any user.

"Keyword"

This will highlight any message that contains the text enclosed in double quotes.

Delete Hilite pattern Select a pattern from the list and press this button to delete it.

1.119 AmIRC.guide/GUI

AmIRC Configuration GUI Page _____ The GUI configuraton page allows you to control some specific aspects of AmIRC that aren't covered in the MUI configuration. Userlist: _____ Userlist You can determine if the user list is visible or not visible, and if it is visible, if it is a separate window, or a part of the AmIRC window. Order This gadget determines how the userlist will be shown. Either in Alpabetical Order, New at bottom or New at top. Buttons? When this is checked the Action buttons will be displayed below the user list. If the user list is configured as a separate window, the buttons will also appear in that window. Userlist win open? When this is checked the userlist window will be opened upon startup, if it is configured as a seperate window. Fonts ____ Channel text font Here you can specify an alternative channel text font that will be used in the main channellist. If none is specified the font set in the MUI Prefs will be used. Dialog window font Here you can specify an alternative dialog window font that will be used in the dialog windows. If none is specified the font set in the MUI Prefs will be used. Misc Query window on different Pubscreen Here you can set an alternative public screen on which the OUERY window will be opened. If no pubscreen is specified, the $\,\, \leftrightarrow \,\,$ Query

Window will open on AmIRC's default screen.

Inline URL/Email handling

Here you can determine if AmIRC will sent the URL or Email address to your browser or email client by either single or double mouseclick. Or you can disable it completely.

Timestamps

With this you can determine if the timestamps that appear in front of each entry in the channellist will be either Short(hh:mm) or Long(hh:mm:ss), or you can disable them.

Window list action You can make the window either Uniconify/Iconify, where the windows will just re-open when uniconified, or Uniconify/Pop to front, where a window will pop to the front when uniconified.

1.120 AmIRC.guide/Colors

AmIRC Configuration

Colors Page

In this section, you may configure the colours that certain text will appear in AmIRC. These colours are based on the MUI pen colours that you have configured in MUI. Just click and hold on the cycle gadget to see a list of the MUI Pen colours available.

Normal Text Text that is a normal message from a user.

Private Messages Text that is a private message from another user to you.

Mode Changes

Text that shows a mode change for the channel.

Local Info

Text that is generated by local events. E.g. Vapor's MicroDot-2 notifying you of new mail.

Background

The background colour of the listview(s).

Own Text

Any text entered by you.

Nick Related Any text that contains a nick action.

Part Messages

Text when someone leaves a channel. Quit Messages Text when someone quits IRC. Invite Messages Text of an invitation to a channel. WhoIs Text Text produced by the WHOIS command. Notify Messages Text of notify messages Highlighted Text Text that is configured in the Hilite list for AmIRC. Server Messages Text that comes from the server. CTCP/DCC Messages Text that informs you of an incoming CTCP or DCC request. Alt. Background The alternative background colour of the listview(s), indicating that the buffer is scrolled back and you're not seeing new messages being entered until you scroll down. Notices Text of notices. Join Messages Text when someone enters a channel. Kick Messages Text when someone is kicked from a channel. CTCP Actions Text produced by a CTCP action. Topic related Text that contains any topic action. WallOps Text Text meant for all IRC Operators. Lists Text

Text produced by the LIST command.

1.121 AmIRC.guide/Window

AmIRC Configuration Windows Page _____ Open which windows on startup _____ In this section you can determine which windows will be opened when AmIRC is started. When the gadget behind an item is checked that window will be opened. Window List? The Window List or Tray Window holds a button for each opened window. URL grabber? The URL Grabber window, keeps track of all URL's (or WWW addresses) mnentioned on any of the joined channels. RAW log? The RAW Log window contains the raw IRC messages. DCC send list? The DCC send window can be used to monitor all outgoing DCC traffic. Notify list? The Notify window holds all nicks you want to be notified of when they join IRC. Info window? The Info window shows all redirected messages and a graphical representation of current lag to the server. Privmsg log? The Privmsg displays all messages sent to you with MSG DCC recv list? The DCC recv window can be used to monitor all incoming DCC traffic.

Other automatic windows _____ 'Invite' window? The 'Invite' window is shown when you are invited to a channel. Windows Limits _____ Scrollback Buffer Size: Here the size of the Scrollback buffer can be set (in lines). Maximun number of query windows: Here you can set how many QUERY windows there will be open maximally at a time. Wheel mouse support ------Wheel scroll lines: Here you can determine how many lines will be scrolled at a time when the mouse wheel is used.

1.122 AmIRC.guide/Logging

```
AmIRC Configuration
Logging Page
_____
Logging
____
In this section the default logfile name and logdirectory can be set.
You can also specify if you want to log all Channel windows and Dialog
windows.
Logfile:
    This is the file that is used when 'Enable Logging?' item is
    enabled in the
               AmIRC menu
Logfile directory:
    This is the directory where all individual logfiles are stored
    when a Channel or Dialog window is logged.
Log all Channels?
    When this item is checked all Channels will be logged.
```

Log all Dialog windows? When this item is checked all Dialog windows will be logged. Log all URLs? When this item is checked all URLs that appear in the URL Grabber will be logged. Filename Templates ------Channel log filename: Here the filename for the channel log files is determined. Dialog log filename: Here the filename for the Dialog window log files is determined. URL log filename: Here the filename for the URL log file is determined. The gadget at the bottom lists all valid placeholders for the filenames.

1.123 AmIRC.guide/Misc

AmIRC Configuration Misc Page _____ CTCP COUND handling _____ Here you may set the directory where AmIRC looks for files requested by incoming CTCP Sound requests. Directory: Here the directory where AmIRC looks for sounds can be entered. Volume: With this slider the playback volume of the sounds can be set from 0-64. Sound Player -----Use external player? When this item is checked AmIRC will use an external player to play the sounds. Player command line

```
This is the command that will be executed when AmIRC uses an
     external player.
CTCP Flood Control
   _____
Request allowed
     The number of CTCP requests allowed from a host is a specified
     time period.
Flood requests tolerated
     The number of flood requests allowed before automatically setting
     an
                IGNORE
                 on the host.
Time periods (seconds)
     The period of time in which the allowed amount of
                CTCP
                's can be
     requested.
Period extend (seconds)
     Time added to flood period per
                CTCP
                 request in case of continued
     flooding.
```

1.124 AmIRC.guide/FKeys

Here you may define the Amiga's ten function keys to insert text into the input string gadget of AmIRC. By using the keys normally, or with the shift or ctrl modifiers, you may define up to 30 text input macros that can be used at the press of a key. This is similar to the functon key macros found on many popular terminal emulation programs.

A /n at the end of a function key definition will send a <CR> after the text. The function key definitions also allow placeholders, similar to the

user buttons

.

1.125 AmIRC.guide/ARexx

AmIRC's ARexx Port

Overview

AmIRC supports a versatile ARexx Port.

- Custom scripts -

These scripts are executed on certain events.

RX_Startup Startup.amirx Executed on startup.

RX_Connected Connected.amirx

RX_Shutdown Shutdown.amirx Excuted on shutdown.

RX_Custom_CTCP Custom_CTCP.amirx Excuted on unknown CTCP commands.

RX_DCCDone DCCDone.amirx

Excuted when a DCC is complete.

Check whether connection is established.

Executed on connection.

RX_HandleFlood HandleFlood.amirx Excuted when a CTCP flood is identified.

- Command reference -

RX_SAY SAY Treat something just like it was ↔ entered in the input string. RX_GETMYNICK GETMYNICK Request current nick name.

RX_ISCONNECTED ISCONNECTED

RX_GETSERVERNAME GETSERVERNAME Request current server name.

RX_USERHOST USERHOST

T Query Userhost of a nick.

RX_ECHO

ECHO

Echos text to the current listview.

channel.

RAW	Sends raw text to the server.
RX_GETWINNUM	
GETWINNUM	Returns the window number for a channel.
RX_CHANNELS	
CHANNELS	Returns string showing joined channels.
RX_GETDCC	
GETDCC	Returns status of DCC's to stems.
RX_GETCHANNEL	
GETCHANNEL	Returns channel joined in active window.
RX_GETSELECTEDUSER GETSELECTEDUSER window.	Returns nick of user selected in userlist $ \leftrightarrow $
RX_GETUSER	
	Returns the nick of user number in \leftrightarrow .ist window.
RX_GETUSERS	
	Returns a string with all users in the t channel.
RX_GETUSERSTATE	
GETUSERSTATE privledge	Tells whether the user has Op, Voice, or no es.
RX_GETLINE	
	Waits for the next line and parses it a stem variable.
RX_GETLINECOUNT	
	Tells you how many lines have been entered enterd the
RX_GETLASTLINE	
GETLASTLINE	Returns the last line, unparsed.
RX_GETAWAYSTATE	
GETAWAYSTATE	Checks if you are marked away.
RX_GETVERSION	
GETVERSION	Tells you what version AmIRC you are $ \leftarrow $
using.	
RX_GETCTCPSOUNDDIR	
GETCTCPSOUNDDIR	Returns CTCP sounds directory.
RX_GETDCCRECEIVEDI	R
	Returns DCC receive directory.

MATCHUSERHOST	Matches a pattern to a hostname.
RX_PLAYSOUND PLAYSOUND	Plays a sound via AmIRC.
RX_PARSELINE PARSELINE variable	Returns the line given in a stem $ \leftrightarrow $.

1.126 AmIRC.guide/RX_Startup

ARGUMENTS:

None

DESCRIPTION:

This script is executed when AmIRC is launched. It may be used to initialise scripts.

1.127 AmIRC.guide/RX_Connected

Connected.amirx

ARGUMENTS:

None

DESCRIPTION:

This script is executed once a connection has been established to a server.

1.128 AmIRC.guide/RX_Shutdown

Shutdown.amirx

ARGUMENTS:

None

DESCRIPTION:

This script is executed on shutdown of an AmIRC client. It may be used

```
to flush memory.
Note: It is imperative to change host address in the beginning of the
script becuase the AmIRC arexx port will drop shortly after
shutdown.amirx is executed. EXAMPLE :
    /* Shutdown.amirx */
```

1.129 AmIRC.guide/RX Custom CTCP

```
Custom_CTCP.amirx
```

address REXX

ARGUMENTS:

command fromnick destination arguments

where "destination" is either the destination channel or your own nickname.

DESCRIPTION:

This script will be executed for every CTCP command received that is not implemented internally into AmIRC. When this script exists,the "Unknown CTCP command ..." line will not be displayed, so include code to emulate it.

EXAMPLE :

This example shows how to implement a simple page command that plays a sound and deiconifies the client.

```
/* Custom_CTCP.amirx */
options results
parse arg command fromnick destination arguments
/* Display unknown CTCP commands */
if command ~= 'PAGE' then do
    'ECHO P=«CTCP» C=5 Unknown "'command'" request from' fromnick'.'
    exit
end
/* Ignore if request was sent to a channel */
if left(1,destination) ~= '#' then do
    /* echo a line,deiconify client and play a sample */
    'ECHO P=«CTCP» C=5' fromnick 'has paged you.'
    'SHOW'
    'PLAYSOUND Page.WAV'
```

end

1.130 AmIRC.guide/RX_DCCDone

DCCDone.amirx

ARGUMENTS:

com successcode nick filename

where : successcode is 1 for a successfull DCC 0 for failed. com is SEND for Outgoing DCC's or RECEIVE for Incoming DCC's.

DESCRIPTION:

This script is executed when a DCC is completed/aborted/failed. It may be used to perform autgomated actions on received files.

EXAMPLE:

This script will extract lha/lzx archives to RAM: and play wav's and snd's.

/* DCCDone.amirx */ options results parse arg com successcode nick filename /*Transfer failed/DCC is incoming - abort*/ if successcode=0 | com='SEND' then exit /* Obtain 3 - letter extension */ ext = upper(right(strip(filename, 'B', ' "'), 4)) /* ** #?.wav or #?.snd will be played in AmIRC ** #?.lha will be extracted to RAM: ** #?.lzx will be extracted to RAM: */ Select when ext = '.WAV' | ext = '.SND' then 'PLAYSOUND' filename when ext = '.LHA' then address command 'lha x' filename 'RAM:' when ext = '.lzx' then address command 'lzx x' filename 'RAM:' otherwise end

1.131 AmIRC.guide/RX_HandleFlood

HandleFlood.amirx

ARGUMENTS:

:nick!user@host type target :text

DESCRIPTION:

If this script exists, it will be called once AmIRC identifies a CTCP flood. It is passed the last flood-line as arguments. If the script does not exist, the internal AmIRC function will be used.

EXAMPLE :

This example will effectively emulate the internal AmIRC flood protection. One may improve on it.

```
/* Handleflood.amirx */
options results
parse arg last
"parseline" last
parse value last.prefix WITH nick'!'user''host
'SAY /IGNORE *!*'host 'CTCP'
"ECHO P=FloodProt Flood from" nick "defused."
```

1.132 AmIRC.guide/RX_SAY

SAY

Usage: SAY TEXT/F

DESCRIPTION:

Treats TEXT just like it has been entered in the string gadget of the current window.

EXAMPLES:

'say /JOIN #Amigager'

.

RELATED TOPICS: See RX_ECHO

1.133 AmIRC.guide/RX_ISCONNECTED

ISCONNECTED

Usage: ISCONNECTED DESCRIPTION:

Checks whether a connection is currently established. Returns RC 0 if the link is up, RC 5 otherwise.

EXAMPLES:

"ISCONNECTED"; "ECHO" rc

RELATED TOPICS:

1.134 AmIRC.guide/RX_GETMYNICK

GETMYNICK

========

Usage:

GETMYNICK

DESCRIPTION:

Returns your current nickname.

EXAMPLES:

"GETMYNICK";"ECHO" result

RELATED TOPICS: See RX_GETSERVERNAME .

1.135 AmIRC.guide/RX_GETSERVERNAME

GETSERVERNAME

Usage: GETSERVERNAME

- -

DESCRIPTION:

Returns the name of the IRC server you are currently connected to.

EXAMPLES:

"GETSERVERNAME"; "ECHO" result

RELATED TOPICS: See

RX_GETMYNICK

1.136 AmIRC.guide/RX_USERHOST

USERHOST

Usage: USERHOST NICK/A

DESCRIPTION:

Returns the userhost specification belonging to NICK. AMIRC keeps an internal list of the userhosts of every nick that occured yet. You can query this database with this command. Note however that it is possible that the userhost isn't in the database yet; this command will not query the server then, but simply return an error.

EXAMPLES:

"USERHOST Olli"; "ECHO" result

RELATED TOPICS: See RX_GETMYNICK

1.137 AmIRC.guide/RX_ECHO

.

ECHO

====

Usage:

BUGS:

ECHO P=PREFIX/K,C=COL/K/N,TEXT/F/A

DESCRIPTION:

Sends text to the listview. With P=Text you can set the prefix which will be put in the Prefix part of the echo. With C=Colour you can set any of the colours set in the AmIRC configuration.The colours you can use are : C=0 : Normal Text C=1 : Highlighted Text C=2 : Private Messages C=3 : Server Messages C=4 : Mode Changes C=5 : CTCP/DCC Messages AmigaDOS Readargs() has a small bug. If you do "ECHO P" or "ECHO P=Prefix P is a letter" or "ECHO C" or "ECHO C=1 C is a letter" AmIRC will not display anything. To cure this enter the template in full like: "ECHO TEXT=P..." EXAMPLES:

"ECHO P=Kewlja C=3 This is echo test"

1.138 AmIRC.guide/RX_RAW

RAW

Usage:

RAW TEXT/F

DESCRIPTION:

Sends text to the server in raw format.

EXAMPLES:

"RAW PRIVMSG phalanx :heya! whats happening?"

1.139 AmIRC.guide/RX_GETWINNUM

GETWINNUM

========

Usage: GETWINNUM CHANNEL/A

DESCRIPTION:

Returns the window number for the specified channel.

EXAMPLES:

options results; "getwinnum CHANNEL=#amiga"; "ECHO" result

1.140 AmIRC.guide/RX_GETCHANNEL

1.141 AmIRC.guide/RX_CHANNELS

GETCHANNEL

CHANNELS

Usage: CHANNELS

DESCRIPTION:

```
Returns a list of channels currently joined in the format: "#channel1 #channel2 etc."
```

EXAMPLES:

```
options results;"channels";"ECHO" result
```

1.142 AmIRC.guide/RX_GETDCC

GETDCC

Usage:

GETDCC DESCRIPTION: Returns status of DCC Send, Receive and chat to stem variables. Remember that the values set are the current ones. If your script will delay for a minute or so the values for cps or state will possible change.To refresh them, call GETDCC again. The status is returned to three stems: dcc.send.# : DCC Send dcc.send.0 holds number of entries. dcc.send.# is composed of : nick moveflag hostname state length cps filename * moveflag reflects if this DCC is MOVE or SEND state can be : 0 : Waiting 1 : Aborted 2 : Sending 3 : Complete 4 : Failed 5 : No Socket 6 : No File 7 : ReadError 8 : Calculating Checksum So to see if a dcc is active, check if state=2|state=8 : DCC Receive dcc.receive.# dcc.receive.0 holds number of entries. dcc.receive.# is composed of : nick moveflag hostname state length cps filename * moveflag reflects if this DCC is MOVE or SEND state can be : 0 : Waiting 1 : Connecting 2 : Receiving 3 : Complete 4 : Failed 5 : Unable to connect 6 : Aborted 7 : No Socket 8 : Unknown Host 9 : No File 10: Disk Write Error So to see if a dcc is active, check if state=1|state=2 EXAMPLE :

```
The following loop goes through the list of dcc receives(if there
are ones active) and parses each entry.
"GETDCC"
if dcc.receive.0>0 THEN DO i=1 TO dcc.receive.0
    parse value dcc.receive.i WITH nick moveflag hostname state length cps \,\leftrightarrow\,
       filename .
    /*process*/
end
dcc.chat.#
           : DCC Chat
dcc.chat.0 holds number of entries.
dcc.chat.# is composed of :
nick state hostname
state can be :
0 : Waiting
1 : Connecting
2 : Connected
3 : Waiting for
4 : Closed
5 : Unable to connect
6 : No Socket
7 : Aborted
So to see if a dcc is active, check if state=1
EXAMPLE :
The following loop goes through the list of dcc chats (if there
are ones active) and parses each entry.
"GETDCC"
if dcc.chat.0>0 THEN DO i=1 TO dcc.chat.0
    parse value dcc.receive.i WITH nick state hostname .
    /*process*/
end
```

1.143 AmIRC.guide/RX_GETSELECTEDUSER

GETSELECTEDUSER

Usage:

GETSELECTEDUSER WINNUM/N, CHANNEL/K

DESCRIPTION:

Returns the Nick the user highlighted in the userlist window.

If the WINNUM argument is specified, the selected user in that window

will be returned. If the CHANNEL argument is specified,the selected user in that channel will be returned. EXAMPLES: options results;"getselecteduser";"ECHO" result options results;"getselecteduser WINNUM=1";"ECHO" result options results;"getselecteduser CHANNEL=#amiga";"ECHO" result RELATED TOPICS: See RX_GETUSER ' RX_GETUSERS ' RX_GETUNNUM .

1.144 AmIRC.guide/RX_GETUSER

GETUSER

Usage

GETUSER USER/N/A,WINNUM/N,CHANNEL/K

DESCRIPTION:

Returns the nick of the user number given on the active channel userlist.

If the WINNUM argument is specified, the nick in that window will be returned. If the CHANNEL argument is specified, the nick in that channel will be returned.

Keep in mind, the userlist starts from 0!

EXAMPLES:

options results; "getuser 0"; "ECHO" result

options results; "getuser 0 WINNUM=1"; "ECHO" result

options results; "getuser 0 CHANNEL=#amiga"; "ECHO" result

RELATED TOPICS: See

RX_GETSELECTEDUSER , RX_GETUSERS , RX_GETWINNUM

1.145 AmIRC.guide/RX_GETUSERS

GETUSERS

=======

Usage

GETUSERS WINNUM/N, CHANNEL/K

DESCRIPTION:

Returns a string containing the list of users on the active channel.

The user list is time-sorted and every user is appended the "@" char for Ops and "+" char for voice.This is effectively a copy from /names output. This will look like : @Nick1 Nick2 +Nick3 Nick4 Nick1 is opped, and joined the channel first(is first in the list). Nick3 is voiced. Nick4 joined the channel last.

If the WINNUM argument is specified, the users in that window will be returned. If the CHANNEL argument is specified, the users in that channel will be returned.

EXAMPLES:

options results; "getusers"; "ECHO" result options results; "getusers WINNUM=1"; "ECHO" result options results; "getusers CHANNEL=#amiga"; "ECHO" result RELATED TOPICS: See RX_GETUSER ' RX_GETSELECTEDUSER .

1.146 AmIRC.guide/RX_GETUSERSTATE

GETUSERSTATE

Usage

GETUSERSTATE USER/N/A, WINNUM/N, CHANNEL/K

DESCRIPTION:

Returns the status of user "num" on the active channel.

RC=0 User is online, but has no special status. RC=1 User is Channel Operator. RC=2 User is online and has been "Voiced". RC=5 User # not in the userlist.

If the WINNUM argument is specified, the status for the user in that window will be returned. If the CHANNEL argument is specified, the status for the user in that channel will be returned.

EXAMPLES:

======

options results; "getuserstate 0"; "ECHO" rc options results; "getuserstate 0 WINNUM=1"; "ECHO" rc options results; "getuserstate 1 CHANNEL=#amiga"; "ECHO" rc

1.147 AmIRC.guide/RX_GETLINE

GETLINE

```
Usage
     GETLINE
DESCRIPTION:
Waits for a line from the server and returns the following stem
variables;.
    LINE
                 = The entire, unparsed, line recieved.
     LINE.PREFIX = The Nick and user@host.
     LINE.COMMAND= The MSG Type.
     LINE.DEST
               = The channel the message was written to.
     LINE.REST = The message text.
EXAMPLES:
     options results
     "getline"
     text=line prefix=line.prefix comm=line.command dest=line.dest
     rest=line.rest
     "ECHO" text prefix comm dest rest
RELATED TOPICS: See
                RX_PARSELINE
```

RX_GETLASTLINE

1.148 AmIRC.guide/RX_GETLINECOUNT

GETLINECOUNT

usaqe

GETLINECOUNT

DESCRIPTION:

Returns the number of lines in the channel buffer for the active window channel.

EXAMPLES:

options results; "getlinecount"; "ECHO" result

RELATED TOPICS: See RX_GETLINE

.

1.149 AmIRC.guide/RX_GETLASTLINE

GETLASTLINE

Usage

GETLASTLINE

DESCRIPTION:

Returns the last private message received in the format;. :nick!~user@host Messagetype Nick :message text.

EXAMPLES:

options results; "getlastline"; "ECHO" result

RELATED TOPICS: See RX_PARSELINE , RX_GETLINE .

1.150 AmIRC.guide/RX_GETAWAYSTATE

1.151 AmIRC.guide/RX_GETVERSION

GETVERSION

Usage GETUSERS

DESCRIPTION:

Returns the Version number of AmIRC.

EXAMPLES:

options results; "getversion"; "ECHO" result

1.152 AmIRC.guide/RX_GETCTCPSOUNDDIR

```
GETCTCPSOUNDDIR
```

Usage GETCTCPSOUNDDIR

DESCRIPTION:

Returns the path to the sounds played with ctcp sound.

EXAMPLES:

options results; "GETCTCPSOUNDDIR" ; "ECHO" result

1.153 AmIRC.guide/RX_GETDCCRECEIVEDIR

GETDCCRECEIVEDIR

Usage GETDCCRECEIVEDIR

DESCRIPTION:

Returns the path of the dcc receive directory.

EXAMPLES:

options results; "GETDCCRECEIVEDIR" ; "ECHO" result

1.154 AmIRC.guide/RX_MATCHUSERHOST

MATCHUSERHOST

Usage

MATCHUSERHOST USERHOST/A, PATTERN/A

DESCRIPTION:

Matches userhost with pattern and sets rc to 0 if there is no match and rc to 1 if there is a match. USERHOST must be a real host like nick!user@hostname and not a pattern. PATTERN may hold special charecters like "*" and "?" such as ni*!use?@ho?tna*.

EXAMPLES:

```
options results
"MATCHUSERHOST Joe!Joeshmoe@ppp100.net.il *!*@*.net.il"
"ECHO" rc
```

1.155 AmIRC.guide/RX_PLAYSOUND

PLAYSOUND

Usage

PLAYSOUND FILENAME, EVENT/K/N

DESCRIPTION:

This command will play a sound via AmIRC. It may play a sound-file if you give it a filename. You dont have to give a complete file name, you can give one that is in the sounds directory. You may also play the sound set for one of the events by specifying the EVENT argument.

EXAMPLES:

"PLAYSOUND Hello.WAV"

"PLAYSOUND EVENT=1"

1.156 AmIRC.guide/RX_PARSELINE

PARSELINE

```
_____
```

Usage

PARSELINE LINE/F/A

DESCRIPTION:

```
Parses the line specified and returns the following stem variables;
    LINE
                = The entire, unparsed, line recieved.
     LINE.PREFIX = The Nick and user@host
     LINE.COMMAND= The MSG Type
     LINE.DEST = The channel the message was written to.
    LINE.REST = The message text.
EXAMPLES:
     options results
     "getlastline"
     last=result
     "parseline" last
     text=line
     prefix=line.prefix
     comm=line.command
     dest=line.dest
     rest=line.rest
     "ECHO" text prefix comm dest rest
RELATED TOPICS: See
                RX_GETLINE
                '
```
