

This command exports data from selected thumbnails in a catalog file to a text file. If no thumbnails are selected, data from the whole catalog is exported.

LightBox first presents a "Thumbnail Fields" export dialog box, which contains two panels:

- a thumbnail field selection panel
- a data record panel

Select fields from the Thumbnail Field panel and use the "Copy" button to move them into the Data Record panel. You may change the order of the fields by using the 'up' and 'down' arrow buttons.

After selecting the thumbnail fields you want and putting them in your desired order, click the "Export" button. LightBox will prompt you for a file name and then export the data.
