

WELCOME!

Welcome to the Tiny Color Generator 1.0!
The Tiny color generator is a Windows 95 program that generates the color codes for HTML documents. You know, the hexadecimal #FFFFFF# (white) numbers that you have to enter in the background and the link colors and so on. This program was designed to make generating the colors as easy as possible. Registration is only \$19, and is available on the Internet and on Compuserve. Thanks for trying the Tiny Color Generator!
