

Welcome to BBEdition 4.0.1!

This installer supplies all of the components you need to update an existing installation of BBEdition 4.0 to version 4.0.1.

The "Easy Install" selection will update your BBEdition 4.0 application to version 4.0.1, update the installed HTML authoring tools to version 2.1, and install version 3.0 of the "FTP" extension, necessary to support the new "Open from FTP Server" and "Save to FTP Server" commands.

The "Custom Install" options may be used to install or update specific components of your BBEdition 4.0 package to current versions.

Please note that this update cannot be applied to a demo, freeware, or beta (pre-release) version of BBEdition, nor can it be used to update an older commercial version of BBEdition. If you are currently using BBEdition Lite, or BBEdition 2.5, 3.0, 3.1, or 3.5, please contact Bare Bones Software for upgrade options and pricing:
