

Adding Your Information To This Stack

In the ZIP Codes and Locations fields, you can always add your own ZIP code and area information by just pointing, clicking, and typing. For certain international cities or states you may want to include specific travel information, addresses, or phone numbers. The choice is up to you! If you are adding a great amount of non-personal data, however, I would like a copy of your modified stack so I can include the data in future updates.

If you want to make your own information card, here's how to do it: Go to a card you want the new card to be inserted AFTER. Then press Command-N (New Card). A new, blank card will appear, and you can add the information in the fields yourself. Some caution, however. The time zone information must follow a specific format or the stack will not recognize it when finding different times. The zone must be the letters "GMT", a negative sign if needed, an integer number, and then ".5", for half an hour, if needed. For example, the following formats are valid: "GMT -5", "GMT 7.5", "GMT 0". Do not use the plus (+) sign. Areas with time zones like GMT +5 hours and 40 minutes will have to be rounded down to the nearest half hour unit.
