

Registration

Starting with Galactic Trek (version 1.6 and later) registration has changed. If you were a previously registered user of Trek then simply write to me with the name of who is supposed to have the new registered version and the address to send the update to and you will be able to use the register feature under the file menu. If you are a new user then simply do the same as registered users, but include \$10 (U.S.) or more (and any nice comments). I will then send you a name and a code that will have to be typed in to register. This code will be able to register ALL future versions of Galactic Trek (or Trek for short); a new version of Isolation! will eventually make it to release that will have similar registration methods... so look for it!

I request that before you go and hand out registered copies of Trek that you first use the UNREGISTER option under the file menu... Remember to do this on the copy you are going to upload or give to a friend, or you will have to use your code to reregister (which isn't hard just annoying). When you register your program you will have to exit and reregister in order to get the full features... this will insure that everything is initialized properly. when you UNregister you can keep playing the registered version (a neat trick is to launch a registered version for someone and then unregister it so they will get hooked and register themselves).

Registration names and codes can be sent to you via electronic means if you request it, otherwise I'll just send out some USnail mail.
