

Settings Files:

With Settings Files, you'll be able to save your settings to an outside file so that you can later apply them to your Finder after a system installation or to other Finders.

To save your settings to a file, select the Save current settings to... menu item under the Control menu.

To load a settings file, select the Load Settings File... menu item under the Control menu.

These functions do not save the changes to your current Finder. Your changes will be saved when you quit the System 7 Pack!
