1.1 Useful Material

U S E F U L M A T E R I A L

This is the root directory of the file tree that contains tools, libraries, documentation, and other useful material that is updated with each CD release. This file is automatically generated from the product info files in this tree.

There are three other files that are automatically generated, which are plain text versions of the same information contained in this file, as follows:

The INDEX file provides a quick overview which contains a one-line entry for each program, including the name of the program, version number, and short description.

The LOCATE file is the same as the INDEX file, except instead of having a short description, it includes the full path to the material you wish to locate.

The CONTENTS file contains detailed information about each program, including a longer description, author information, and location in the file tree.

Generally you would only need these files if you were accessing the information without the help of AmigaGuide.
