

VB*Build Version 1.1 For Windows

Registration

To register for the program, please send **£10 (ten pounds sterling)** to the address below and you will receive an updated copy of the program (Version 1.x or 2.0).

Other hard currencies are accepted, please use an appropriate exchange rate to achieve a similar value as above.

Remember most of the fee will cover the program update. So any additional donations will be gratefully accepted.

Registered Program Features.

- Ability to specify that a function/routine contains an error routine, these will be added automatically with dummy labels. A very worthy feature in my experience.
- Ability to add preset text code into your defined functions/routines.
- 40 Form/Code Sections rather than the 20 in the Shareware Version.
