Muon Tau Pro Release Notes

Decompressing the electronic distribution package of the Muon Tau Pro software constitutes acceptance of the following terms and conditions:

1. The Muon Tau Pro and supplementary files provided ("The Software") are copyright Muon Software Ltd 1999/2000/2001. The Software may not be copied* or distributed (by any means, mechanical or electronic). This covers, but is not limited to, posting to websites, newsgroups or sending via e-mail. Doing so would violate copyright law and is a criminal offence.
2. You are granted a license to use The Software on one computer only at a time. You may not resell, rent or otherwise transfer The Software to another party for benefit.
3. The Software has been extensively tested. Unfortunately, due to wide variance in computer and software configurations no guarantee or warranty can realistically be offered or expected. Therefore, no warranty either express or implied is given as to fitness for a particular purpose.
4. In areas where limited guarantees/warranties cannot be enforced the maximum available remedy will be, in case of dispute, the actual price you paid for The Software.
5. In the event of The Software being found to be defective, the remedy for purchasers is limited to an updated version of The Software as and when one is made generally available.
6. Muon Software Ltd cannot be held responsible for any direct or indirect/consequential loss or damage caused by the use of The Software.
7. Use of The Software is entirely at your risk.
8. You are encouraged to be careful with your amplification and monitoring equipment.

* Since this software is distributed electronically you are permitted to make one personal diskette copy of The Software as a backup in case of emergency.

EXTRACTING THE PRODUCT FILE CONSTITUTES ACCEPTANCE OF THE TERMS OF THIS AGREEMENT

Installation Instructions

1. Copy the Muon Tau Pro file to your vstplugins folder (on the PC platform the program file will be a .DLL file, called "taupro.dll"). You may put the file "taupro.fxb", which contains a few example patches, anywhere..

v1.0 Known Issues

1. When the Muon Tau Pro is loaded into a VST Instrument rack sometimes the left channel volume appears to be attenuated, despite the fader being at unity gain and the pan hard left. This is a bug in VST3.7, not in the Tau Pro. To rectify, "jiggle" the pan gadget of the offending track, then set back to maximum. VST3.7r1 does not appear to correct this bug.
2. Background graphics do not update whilst a knob is being turned in many hosts (Logic Audio, Orion, Fruity Loops). This is not a bug in the Tau Pro but the host software itself, and is not harmful.

(c) Muon Software 2001
