

Weiser Lock KL Series

Models NKL 520 and NKL 580

The keyed lever features Weiser's unique disengaging lever. Unlike other levers which are rigid when locked, the exterior lever turns freely and is disengaged from the latch. This deters forcing of the lock and safeguards the internal mechanism from damage. Even when the door is locked, the inside lever will always retract the latch for emergency exit.

These levers are recommended by the ADA (Americans with Disabilities Act) to provide easy access for the handicapped and elderly.

Functions

NKL 520, D is the Keyed Entry leverset. The latchbolt is locked/unlocked by key outside or by turn button inside. The latch can always be retracted from the inside.

NKL 580, D is the Storeroom/Exit leverset. It has a keyed lever outside. The outside lever is always locked when the key is removed. The latch can always be retracted from the inside.

Both are available in Bright Brass (-3), as pictured here, and Satin Chrome (-26D) and are completely reversible for left- or right-handed doors.
