Plants:

You'll find two kinds of plants in this software.

- Generic placeholders
- Specific varieties

Use the generic shapes to **quickly add major plantings** to your landscape.

Replace a generic plant with a specific one by double clicking on it in Top View to open its **Spec Sheet.**

1. Click on the *Replace With…*button in the Spec Sheet.

2. Choose something on the list or search for a specific plant in the database.

3. Click the Plants button in the Search section, lower left, to open the Plant Finder and search by plant name or by attributes.

See <<GUIDE selecting_plants>> "Selecting Plants". <<END>>
