

# AllText

## Multiple Font and Color Text Box Control

 AllText is a multiple font text box control designed for Visual Basic programmers by **Bennet-Tec Information Systems, Inc.** AllText supports the simultaneous display of multiple fonts, font characteristics and color; paragraph formatting; and even the inclusion of a bit mapped background to the control. Using AllText, you can include a WYSIWYG edit/display text box as part of your Visual Basic program. The ability to highlight words with colors as well as font characteristics make it the ideal choice for use in word processing and HYPERTEXT applications.

### Unique Features :

 The AllText control supports display and editing of text in multiple simultaneous fonts and font characteristics:

FontFamily, FontName, FontSize

**Bold,**

Underline Underline Underline Underline Underline

*Italic, bold italic*

~~StrikeThrough,~~

**Super**/**Sub**<sub>s</sub>**cript**

**Colors (the 16 QBColor Settings are supported)**

***Custom Shadowing***

 Virtually unlimited text

Up to 1,000,000 paragraphs of up to 30,000 characters per paragraph.

 Text entered into the ALLText control can be broken into independently formatted paragraphs supporting:

Alignment: centered, left, right or left\right justify,

Margins: left and right margin indents

Vertical spacing.

🎮 ALLText supports the creation and use of a Font Table facilitating the smooth and rapid changing of fonts; ie: changing to Arial Bold 25 pt. italics all in one step.

🎮 ALLText supports a unique BitMapped Background. Any bitmapped image can be displayed and positioned BETWEEN the standard background (choice of colors) and the text. This can be used for special effects such as animation within the text box or sliding windows to hide or reveal colored text.

🎮 ALLText supports a WriteProtect mode for presentation of text, allowing display and programmatic text manipulation, while preventing end-user modifications to the text.

🎮 ALLText is fast and lean, without extra baggage, but extremely flexible. What you see here is an application built using ALLText HT/Pro edition. Only the text window and scroll bar is controlled by the control. Menus and status bar were written using a small amount of VB code and are fully customizable.. File Save and Load are also under VBControl allowing you to use the format you need for your application. Full documentation and the source code for this application are included with ALLText.

🎮 Embedded pictures and OLE objects: **(HT/Pro edition)**

🎮 ALLText (HT/Pro edition) supports left, right and centered tabs as well as paragraph Borders

sdasda	kjkljkljkljklj	retreter	1233
