

## **What are the differences between SpyWorks Professional V5.0 and SpyWorks Standard V4.2**

### **SpyWorks 5 Professional**

#### **Debug and Extend your Applications**

You CAN do that with Visual Basic! ActiveX extension and OLE Hook technology let you override the default behavior of standard interfaces.

Add new interfaces to your classes and controls. Dynamic Export Technology™- Export functions from your VB ActiveX DLLs. Create Control Panel Applets, export function libraries, ISAPI filters and NT services! Includes subclassing and hook controls (includes the source code to a commercial quality subclasser/hook control), sample code and more. SpyWorks Professional is a subscription based edition which includes SpyWorks 2.1 and Standard and three additional shipments of new features, application notes and upgrades delivered to you every 3-4 months.

### **SpyWorks 4 Standard**

#### **Debug and Extend your Applications**

The most advanced subclassing tool available for intercepting Windows messages to any window, form or control. Support for Windows hooks to intercept messages on a task or system-wide basis. Keyboard hooks for hotkey support & tools that let you use Windows callbacks. Plus virtual forms, rollup windows, true mouse enter & mouse exit detection debugging tools & more. Includes the Desaware API Class Library. This 16 & 32 bit OCX edition is for Visual Basic 4.0, 5.0 and other OLE containers.
