🔑 Programs with a registration key

What´s a registration key?
A program that uses our registration-key-concept will be a normal sharewareversion as long as you don´t own a registration key. You can test the sharewareversion up to 30 days. This sharewareversion can be switched to a licensed version by using the registration key.
If you buy a registration key you don´t get a program disk. If you don´t own the sharewareversion of the program you also need the program disk.

How to input the registration key:
If you don´t have installed the program yet please do this first. Now start the program and look for the function *Enter your registrationkey* included in menu *Help*. You also can use the registration-button included in the toolbar (look for a button with a key-symbol). A dialog will appear on screen. Here you input your full address and your personal key which you got from us. Now click OK and you sharewareversion will switch to licenced version.

Advantages for you?
1. If there comes a new version of this software you don´t have to buy an update!. You only have to get the new version. For example you can download the new version **free in our mailbox** or via CompuServe. You also can buy the program disk from us or a sharewaredistributor. The new version can be licensed with your old key.
2. You don´t have to install the program twice. After installing the sharewareversion you don´t need to install the program again after purchasing the registration key. The program will only be switched to licensed version.
3. You don´t have to buy a program disk if you already have the shareware. So you save money.
4. You only pay **1,-- DM p&p** if you order a registration key only and prepay.
5. If you order by phone or via our **mailbox** you´ll get a temporary key which will temporary switch the program to a licensed version until you receive the key for permanent use.
6. If you order via CompuServe **SWREG** you will receive the permanent key via e-mail. It´s the easiest way to order from outside europe because the payment will be transacted by CompuServe.

The following programs make use of the registration key:

🖼️   SH-CopyStar   19 DM (US$ 15 if you order via CompuServe´s SWREG)

🖼️   SH-Strichcode   19 DM (US$ 15 if you order via CompuServe´s SWREG)

🖼️   SH-WINColorStar 2000   29 DM (US$ 20 if you order via CompuServe´s SWREG)
NEW: Network-game!

More will come.

![icon] **WinBlocker** **for Windows** (German version available only) 39,-- DM

If you can´t see Tetris any more this game will be a fantastic alternative! In this game there are falling radioactive figures down to earth. Now you have to fill these figures with blocks. Try to build rectangle because they will be destroyes then. It´s your job to destroy all figures before they can reach the earth. You think that´s easy? Try! Many different combinations of different figures will make your job as difficult as possible. So you need good reaction and capability to combine. There are 10 levels to be solved. Each level will not only be faster. It will be more complex and sophisticated. **There are 300 different formations of figures which will appear**. This is a guarantee against boredom. Including sounds and many special effects.

WinBlocker is running under Windows 3.1 or higher. You´ll need a 386 processor (or better). It supports Windows WAV-sounds and displays up to 256 colors.

SH-WINColorStar 2000 for Windows (Registration key only)   29,-- DM

SH-WINColorStar 2000 for Windows **Programdisk**   5,-- DM

SH-WINColorStar 2000 for Windows (Registrationkey via SWREG   US$20.00
ID#4031)

The new challenge for all Tetris and Columns(TM) fans! SH-WinColorStar 2000 combine all the advantages of the classic games and more! There are more than 200 levels. Each level will present you a new problem you have to solve. Many new ideas are included in this game. You will be surprised of the great variety of this game.
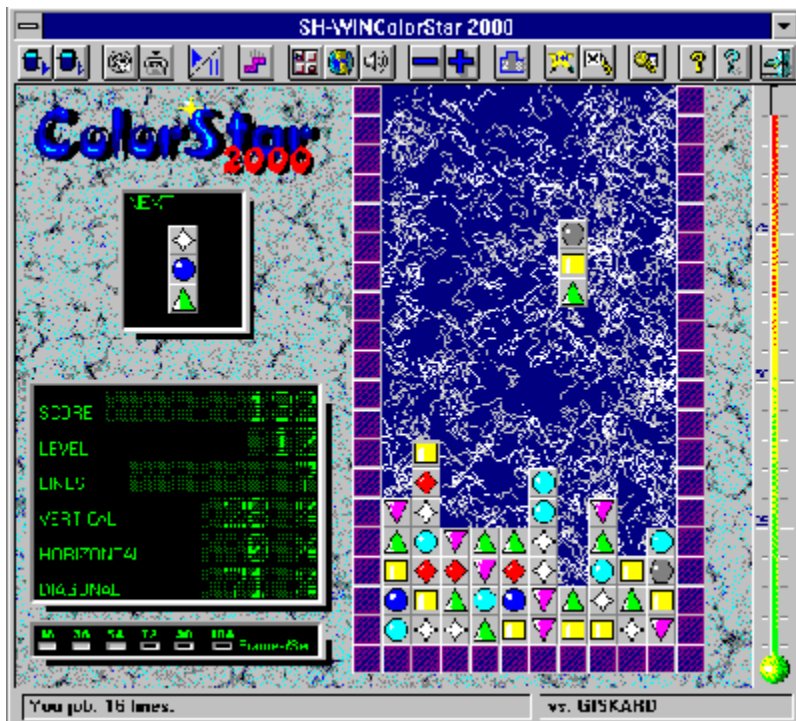

Many different combinations of different figures will make your job interesting.You need good reaction and capability to combine.There are **over 200 different levels**. This is a guarantee against boredom.

Also there are many **arcade-game levels.** These levels have no problem to solve. You only have to play as long as you can to get the highscore.

SH-WINColorStar is running under Windows 3.1 or higher. It runs also unter Windows NT 3.5. You´ll need a 386 processor (or better). It supports Windows WAV-sounds and displays up to 256 colors. A variable framerate guarantees high ergonomics and a very smooth scrolling. Networkgame under WfW or NT.

NEW: Network-game!

Play against a competitor - find out who the better player is! If you remove big combinations of lines your competitor will receive the removed lines.

# WinPuzzle **for Windows** (German version available only)   19,-- DM

WinPuzzle is a puzzle game for Windows. Many motives and options guarantee that you´ll have fun with this game. It´s your job to get back the original picture of the puzzle by moving the particles. You can load every BMP picture and puzzle it.

WinPuzzle is running under Windows 3.1 or higher. You´ll need a 386 processor (or better). It supports Windows WAV-sounds and displays up to 256 colors.

SH-CopyStar for Windows (Registration key only)   19,-- DM

SH-CopyStar for Windows **Programdisk**   5,-- DM

SH-CopyStar for Windows (Registration key via SWREG ID#4030)   US$ 15.00

A small selection of advantages why you should have SH-CopyStar:

1. Diskcopying **without changing** the source- and destinationdisk! The sourcedisk will be read in and hold in RAM. There could be made **many copies without reading in the sourcedisk again.** Because the copy of the sourcedisk is held in **RAM**, there is no need to read or swap from harddisk effecting a very fast copy procedure.

2. SH-CopyStar knows all DOS-standard formats and it also knows all **special formats** (e.g. 1722 kB) and supports **format independend copies** so you could copy a 5¼ 1,2 MB HD Disk to a 3½ HD.

3. Format transformation: You could read a 5¼ 360kB Disk and then change the format to 1.44 MB or even to 1.72 MB, before you write it back to the target disk. **We don´t know other copyprograms which support format transformation! So if they support format independent copies they loose capacity because they couldn´t transform the containing information of the sourcedisk to a higher format on the destination disk.**

4. Multitasking: While you copy or format a disk you can work on with other programs. You even can iconize SH-CopyStar and follow the activity in the percentage line of the icon.

5. Nonstop copying: SH-CopyStar automatically recognize disk changes so for multicopies you only need to insert one disk after another...Nonstop copies are even posible if SH-CopyStar is iconized.

Commands for diskchanges will be displayed in the icon.

6. SH-CopyStar supports **anti virus software**: up to 8 different virus scanners can directly handled by SH-CopyStar e.g. before each reading of a disk. Some scanners like *McAfee-Scan, F-Prot, Thunderbyte Antivirus* and *McAfees VirusScan for Windows* are predefined and can easily be used.

7. Once you read a disk in you can save it as an imagefile. The sourcedisk needn´t to be read in once more. The **imagefiles** can be saved with very **fast compression** to save space on your harddisk

8. SH-CopyStar is a **intelligent copyprogram** because only needed tracks will be recognized for **speeding up the copy procedure.**

9. To get a general **quicker access** on a disk written with SH-CopyStar you can optionally **defragment splitted files**. With SH-CopyStar you can produce disks which have a **0% fragmentation.**

10. Import & export: diskimages can be read from a directory or write to a directory. So you can easy handle and maintain your masterdisks on your harddisk.

11. Of course SH-CopyStar can be used for normal **copy** jobs and simple **formatting or quickformatting** your disks. If you have to produce many duplicates or format many disks you will be happy about the **nonstop** features **for copying and formatting**.

12. Info-Service for the diskimage show e.g. diskcontents, diskallocation and hints for optimizing.

13. SH-CopyStar supports **Drag and Drop** for easy loading imagefiles.

14. SH-CopyStar comes with a big **helpfile.**

15 Sounds for errors and warnings via **WAV-files** which you can configure using the **control panel**.

16. SH-CopyStar **saves all properties** for you next session.

17. SH-CopyStar can **refresh** your old disks.

18. SH-CopyStar supports the usage of an **individual boottext** and the usage of **three different bootroutines**. A bootpause up to 9 seconds can be selected.

19. SH-CopyStar can **verify and compare** your disks.

20. SH-CopyStar has a **compact design, good error display** (three different types) and a **error log system**.

21. Many settings for e.g. retries etc.

22. 3D-Look (ctl3dv2.dll), **toolbar** with **tooltips** and **tabbed dialogs**.

23. Disklabel is changeable and last but not least SH-CopyStar **displays how much time it takes for a operation**.

... and there are many ideas which we can´t implement in this version. But if you decide for SH-CopyStar we will be pleased to develope one of the best copyprograms for Windows you can use.

SH-CopyStar is running under Windows 3.1 or higher. It supports Windows WAV-sounds.

See also <u>Programs with registrationkey</u>

SH-Strichcode for Windows (Registrationkey only)   19,-- DM

SH-Strichcode for Windows **Programdisk**   5,-- DM

**SH-Strichcode** for Windows (Registrationkey via SWREG ID#4032)   US$ 15.00

SH-Strichcode is a program to create different barcode types. (**EAN-13, EAN-8, UPC-A , CODE 39, Code 2/5 interleaved, Codabar, EAN-5 Add on, EAN-2 Add on and ISBN**). It´s easy to use: SH-Strichcode will be registered as **OLE-server** automatically. For applications not supporting OLE you also can use the clipboard to transfer the barcodes.

SH-Strichcode will automatically calculate the checksum and shows you the type of the barcode in the statusline. You can select a TrueType font for the characters inside the code, e.g. OCR-A. You also can print barcodes. WinWord Markos are included. Detailed help. Conversion of EAN-13 to ISBN and reverse plus a list to compare EAN and ISBN.

SH-Strichcode is running under Windows 3.1 or higher and Windows NT 3.5. SH-Strichcode is available in german language only.
