How to Get Started

After UnZipped

- Make sure unzipped Blizzard is put into its own DIR on your main drive
- All files should be in the DIR Blizzard to work properly

Running Blizzard

- Change the given name to anything u want
- If you dont know how to go to the setup options : go to FILE in the toolbar and down to Setup...
- If your a begginer....which i dont know why u would want this script if you are.....then right click on a channel window in the names,main,or query/chat window.

Blizzard Info

Blizzard is a script with war, protection options mostly. It has Nuke, Spy Bot, Clones, Floodz, Channel options, Channel Stats, Other Channel Systems such as: Revolving Door, Clone Detector, and many more. Blizzard is a script that is for either Script Experts or Warmongers. The Flood Protection of Blizzard is practically Invincible. If you have a Winsock connection then the Nuking program will be useful. If you do not know how to nuke then ask someone who does. Do not rip off this or any other script. If you do most good scripters will notice it and you will be screwed. Blizzard has many other options including Auto Op and Shitlist. . **WARNING: SOME OF THE OPTIONS IN BLIZZARD CAN GET U BANNED FROM A SERVER IF YOU ARE CAUGHT USING THEM BY AN ADMIN.**

Blizzard includes its own game. Called Ski Free..... Just use the popup in mIRC to run it. :)

If you have any questions regarding Blizzard you can find Nighthawk on IRC (mIRC) on #mIRCscripts #Scripts #Script #mIRCscripting on the UNDERNET server group.

Rip:

To take something off of another script to use for yours. Also using someones script and just editing some things is a good example of ripping

This Blizzard Help file was made by Nighthawk.(With the help of DemiGod.)

Features

- Great Flood Protection
- Protection (Ban Protection...ect....)
 - Channel Options
- Channel Scans/Detectors/Stats

Blizzard: Frozen Clones & Spy Bot

Frozen Clones

Clones can be lethal, fun, and ass kickers.....but also they can get you banned from any server. If you are caught with clones by IRCops then the chances are, you are gonna be g-lined. Word to the wise.....be like a swat team.....get the clones in and get them the hell out!

To run Blizzard's Frozen Clones you need to click on the popup and load as many as you want. It should open another mIRC. Enter each mIRC that it loads and choose the server you would like to load the clones to. The rest of the popups control the floods and control joining channels and quitting IRC and mIRC. Use the floods wisely.

Blizzard Spy Bot

The Blizzard Spy Bot is like a clone. But there is less chance of getting caught. One more connection usually is disregarded by IRCops. In using the Blizzard Spy Bot you click on the popup for Start Spy Bot and it will open another mIRC like the clones do. When the second mIRC is loaded go into the mIRC and click on the server you want the bot to connect to. When it connects it will DCC you. Accept the DCC and go back to the Spy Bot popups. Click on the join option and type in the channel you would like the Spy Bot to join. It will join and record everything that occurs in the channel to the DCC.

G-lined:

Getting banned from a server permanently or for a certain period of time.

Floodnet:

A group of linked DCC's that has flood options....plain Chaos..

Blizzard Floodnet v1.0

The Blizzard Floodnet is mainly for having a little bit of hell running in any server. People will connect to the Floodnet Bot and be linked to one main DCC. Everything that occurs is listed and there are flood commands. The people will type and flood commands and clones will flood the people selected by others. The Blizzard Floodnet is still in beta form. be patient.
