VB-Dial Version 2.1d

Feb 11, 1993

Version Info:

1.0 Was the first. Had no 3D or Multimedia

2.0 Introduced the 3D look, online help & minor bug fixes.

2.1 Introduced Multimedia & minor bug fixes.

2.1b Converted to Visual Basic Ver 2.0 which reduced the exe size by 30%
Sped up the program about 500%, improved the Setup program so that it
won't overwrite any existing files. Setup now can install from either
three 360K floppies, (prompting for the next disks), or if all files are
on one High-Density, it won't prompt you for next disk at all. Setup
also expands compressed files.

2.1c Will add ZModem, CompuServe B protocols, and High-Speed modem
support. IE 14,400 and 19,200 baud rates.

2.2d Will be a bug fix for version 2.1d. (so let us know of any bugs.)
