Presents....

Pix Fix™ is a utility which will correct the file header problems many people encounter when downloading GIF or JPG image files. Many times these files contain Mac (or other foreign operating system) generated headers which render these files useless under an IBM DOS/MS Windows system. If you've ever received an "incorrect format" (or similiar error) while trying to view an otherwise normal looking GIF or JPG file, this may very well be the problem. *Pix Fix* eliminates these pesky headers and creates a DOS compatible GIF or JPG image.

The *Pix Fix* utility is extremely straightforward. Simply run *Pix Fix*, select the GIF or JPG file (Source) you wish to correct, select a Destination, and process the file. There are only a few points to keep in mind.....

     - *Pix Fix* requires Windows 3.1.

     - The *Pix Fix* Source dialog will allow you to choose any file to modify. If a file other than a GIF or JPG (ie: PCX,TGA,etc...) is giving you headaches, trying running it through *Pix Fix*. We've never had header problems with any other type of graphic image, but *Pix Fix* WILL correct header problems for any file type.

     - The Destination filename defaults to the filename you selected as a Source. However, for safety's sake *Pix Fix* WILL NOT allow you to save your corrected file under the same name as the original. You must supply a unique, non-existent destination filename. You are presented with the original filename simply as a matter of convenience, so that you can make a small change to the original filename without having to type in a complete name. Also be sure to maintain the extension (.GIF .JPG or whatever...) of your source file in your destination filename. Otherwise your graphic viewer may not be able to read the corrected file.

     - If you do not currently have a copy of the included run-time library (BWCC.DLL), please place this file in the same directory as *Pix Fix* or in a directory included in your DOS PATH (ie: WINDOWS/SYSTEM).

     - An installation routine would be larger that *Pix Fix* itself, so we have left it up to the user to install *Pix Fix* as a Program Manager icon. We apologize for this inconvenience.

DISCLAIMER

While this product has be thoroughly tested for bugs, *Pix Fix* is offered as is, and the author cannot be held liable for any problems resulting from the direct or indirect use of this product.

NAG, NAG, NAG....

Pix Fix is shareware. If you find it of value to you (or are just a generous person by heart!) please send a modest donation so that we may continue our shareware efforts. Those who donate will receive all future updates of *Pix Fix* and information regarding other **4am Software** releases.
