DeZkTop 1.6c

As of 31/5/93 this is the most up to date release of DeZkTop. This archive should contain the files:

DEZKTOP.EXE
DEZKLIB.DLL
DEZKTOP.HLP
DEZKTOP.INI
DEZKMENU.INI
DEZKFLT.INI
DEZKHKEY.INI
DEZKSIZE.INI
README.WRI (this file)

Installation
If this is a new installation just copy all the ini files to your windows directory. If it is an upgrade do not copy the dezktop.ini and dezkmenu.ini files. Put dezktop.exe, dezklib.dll and dezktop.hlp together in a directory of your choosing; these three files need to be kept together.

If you want an icon for DeZkTop in Program Manager add it using the New command from the Program Manager File menu. If you want to make DeZkTop you shell, which is the best way to use it, then follow the instructions in the help file.

New Features:
DeZkTop finally has an arrange floater command.
Numerous trivial bugs have been fixed.

Changes:
I have changed the way you add an entry to the window sizing box. There is no longer an Add button, just click and hold the left mouse button over the sizing window client area (not over the list box or Delete button) and release the mouse button when over the title bar of the app you want to size. I'm sorry this is a bit counter-intuitive, it has changed because of the way that Windows NT handles mouse capture.

Version 1.6c does not read Floaters Hot-Keys and Sizes from dezktop.ini, instead it stores them in separate files, dezkflt.ini, dezkhkey.ini and dezksize.ini. When you upgrade you will need to recreate any Floaters, Hot-Keys and Sizes you used in v1.6b.

Gremlins
Under Windows NT the menu windows are a bit erratic about resizing themselves when a new app is added.

Shareware
DeZkTop is a shareware program. If you like it enough to use it do the decent thing and send ten pounds sterling to:

John Rennie.
