CRLF - A Unix to DOS Utility

Function:
CRLF converts Unix style text files to DOS standard text files.

Installation
Copy CRLF.EXE to any directory you wish, launch it using Program Manager or your favorite menu system.

Constraints
Requires Windows 3.1. Reads any length file, supports records up to 998 character in length.

Using CRLF
Select the File/Open menu command, choose the input file using the standard file selection box. Then choose the output file with a second file selection dialog box. The file names **must** be different.

CRLF does a prepass of the file to count the records, and then does the conversion. A progress meter is displayed to help pass the time.

Disclaimer
You use CRLF entirely at your own risk. It may or may not be suitable for your system.
