Shareware

WinTZ is a Windows 3.1 compatible program which displays the time in the 24 meridians (timezones, if you will) around the world. The display has two highlighted areas identified as the source zone (this is normally set to the user's time zone and is colored with a red background and a white foreground) and the target zone (colored with a cyan background and white foreground) which can be set to any zone the user might wish and is used to readily identify a zone of interest to the user. Both of these highlighted zones can be moved at the user's discretion. Time zone names can be changed if necessary and saved or not saved, using the Options Menu, as desired, to be used in subsequent activation(s) of **WinTZ**.

The display can be changed to show civilian time (with am/pm indicators) or military time (24 hour time) by using the **OPTIONS MENU**.

If a time zone is in the previous day, relative to the source zone, a minus sign "-" is appended to the zone time. If it is in the next

day, a plus sign "+" is appended. If the zone is the same day as the source zone, no symbol is added.

If a time zone is between 6 am and 6 pm in that zone, a white bar appears appended to the time, otherwise a black bar is appended. This symbology is used to identify relative day and night areas around the globe.

Click on the [OPTIONS MENU](#) to set your options.

To move the source/target highlights, place the mouse cursor over the desired highlight and depress and hold the left mouse button down. The title bar will become inactive if the mouse button is depressed while over a source or target zone. Otherwise, you missed!

While holding the left mouse button down, drag the highlight to the new [source/target zone](#) location and release the left mouse button.

If the title bar is inactive, it will again become active when the mouse button is released.

If the target and source zones are equal, the text displayed is in a unique color.

To change the time zone names, double click on the zone name or time and enter the new name in the dialog box. Names will be saved with any selections you elect to save.

Registration

Registration

Registration

Registration

Registration

Registration

- 07/16/93 - Version 01.12 - Add CSS logo oval to about box.
- 07/06/93 - Version 01.11 - Incorporated default timezone names into the program and included the LoadLibrary command into the source code to load the BWCC.DLL library.
- 06/30/93 - Version 01.10 - Split common standard help info and registration form into separate files. Program operation not affected except in minor wording changes in help info.
- 06/13/93 - Version 01.10 - Updated help file. Changed version history from a dialog box to a help topic. Changed client area font to SYSTEM_FIXED_FONT.
- 05/27/93 - Version 01.04 - Changed dialog boxes to Borland style and added icon to about dialog box.
- 03/20/93 - Version 01.03 - Incorporated a help file system

using WinHelp.

03/18/93 - Version 01.02 - Changed version and help displays from message boxes to dialog boxes.

03/02/93 - Version 01.01 - Changed window style from overlapped to sysmenu which precludes sizing of the window.

Changed window sizing and position to be device independent.

01/26/93 - Version 01.00 - Formal release.

SOURCE ZONE

The source zone is the meridian (time zone) which is highlighted with a red background and white foreground and is normally positioned over the user's time zone. This highlighting can be repositioned by placing the mouse cursor over the highlighted ~~zone name~~ or time and, while holding the mouse button down, drag it to the new desired location and releasing the button.

TARGET ZONE

The target zone is the meridian (time zone) which is highlighted with a cyan background and white foreground and is positioned over a time zone that is of interest to the user to make identification easier. This highlighting can be repositioned by placing the mouse cursor over the highlighted zone name or time and, while holding the mouse button down, drag it to the new desired location and releasing the button.

"_"

A "-" symbol following the time of a zone indicates that the time in that zone is in the previous day relative to the source zone currently selected.

"+"

A "+" symbol following the time of a zone indicates that the time in that zone is in the next day relative to the source zone currently selected.

WHITE BAR

A white bar following a time indicates that the time zone is in the hours between 6 am and 6pm (roughly day time).

BLACK BAR

A black bar following a time indicates that the time zone is in the hours between 6 pm and 6am (roughly night time).

DAY AND NIGHT

As a rough indication as to whether a time zone is in darkness or daylight, a white bar or black bar is appended to the zone time.

Product Support

This is a product of Custom Software Services designed to run under Windows 3.1(tm). It is currently being released under the **SHAREWARE** concept. However, it is anticipated that the product may soon be available as a commercial item - selling at a much greater price than the registration amount asked for under the **SHAREWARE** concept. At that time, the product will no longer be available as **SHAREWARE**.

As development continues, and until the final commercial version is fully implemented, **SHAREWARE** registered users will be notified of any significant updates which can be purchased for the fee specified on the registration form to cover the cost of the computer media and shipping and handling costs.

Registering your copy of the CSS product also entitles you to product support from CSS engineering staff. Additionally, fully registered users (those who have purchased the product computer media prior to the release date of the first commercially available product) will have the opportunity to purchase the first commercially released version for the additional cost of twice the computer media fee shown on the registration form to cover the cost of the media, shipping and handling, and additional database management costs. This is a one time offer and will not be valid for subsequent commercial releases of this software.

This product is currently distributed under the **SHAREWARE** marketing concept. It is not free software and it has not been released to the public domain. If the program doesn't meet your needs, you're under no obligation to pay for it. However, you are not licensed to use the software under the copyright laws until it is registered with the copyright holder.

You may evaluate this product for five days at no charge. If at the end of that time, you find the product to be a useful addition to your software library, you must become a registered user by sending the registration fee shown on the registration form (registration only) or a FULLY registered user by sending the registration fee and latest shareware version on disk media cost (both shown on the registration form) to the address shown on the form.

If you do not decide to register the software, you must discontinue its use and destroy all copies in your possession.

If you register, be sure to include your name and address. Also, indicate which version of the product you are currently using. Use the Help|About option from the program's Help Menu to determine the version you currently have.

Individuals who become fully registered users by submitting the registration fee and media cost (registration with disk, 3-1/2", high density, 1.44Mb, or 5-1/4" high density, 1.2Mb) will receive the latest version of this product on disk media. Please specify 3-1/2" or 5-1/4" diskettes.

You can click on the topic Registration Form or this button

A rectangular button with a grey gradient background and a thin black border. The word "Registration" is centered on the button in a black, sans-serif font.

to access a form that can be printed and mailed in with your registration fee or to determine current registration and media costs.

The **SHAREWARE** marketing concept can work **ONLY** if you do your **SHARE** in supporting the authors of such software by

registering your copy of their packages. Keep **SHAREWARE** alive by registering your copy of this product immediately!

THANK YOU FOR YOUR SUPPORT!

Product Support

For information on using Help, or to find out about moving, scrolling, or sizing windows, press F1 from within any program Help window. This will take you to the Microsoft Windows(tm) Index to Using Help. From there, you can get to Help topics within Microsoft's Help file.

When you want to return to the program Help, close the Windows(tm) Help window and choose the desired topic from the program's Help menu.

From within the program's help system, you can find help in the following ways:

Help Search

1. Choose the Search button (Alt+S) from the top of the Help window (just below the menu bar).
2. In the Help Search dialog box, under Search For, type in the term you want Help for.
If the term is indexed in the Help, you will go to that term in the upper list box.
If the term is not indexed, you will go to the closest lexical match instead.
3. Press Enter or choose the dialog's Search button. You will see a list of 1 or more Help topics in the Topics Found list box.

4. Scroll through the list to find a specific topic, then press Enter or choose the Go To button to jump to that Help topic.

Help Index

1. Go to the Help Index and choose the category that best describes the term of interest.
2. Then traverse Help links through the topics until you find what you are looking for. If the term is documented in the Help system, you should be able to find it within 4 or 5 topics.

CSS specializes in DOS and Windows(tm) application development. Services are also available for tutoring, training and consultation on various computer related matters.

Send for our resume' and brochure to the above address.

SHAREWARE

Shareware is a way of distributing computer software that allows you to try out a program before you purchase it. It is **NOT** free software!

REGISTERED USER

A person who submits the shareware registration fee to the copyright holder, but does not purchase the latest version of the product available on computer media as described in the registration topic of this help file.

FULLY REGISTERED USER

A person who submits the shareware registration fee to the copyright holder AND purchases the latest version of the product on computer media as described in the registration topic of this help file.

MENUS

Generally, menus appear in the program as a menu bar across the top of the display or as pop up menus which are displayed as a result of selecting an item from the menu bar. Several tiers of menus may be available to the user. A menu item suffixed with a right pointing triangle indicates another pop-up menu will be displayed when the item is chosen, while ellipses (...) indicate a dialog box results from it's selection.

DIALOG BOX

A dialog box is a pop up window that permits the user to supply additional information required by the program. The dialog box can contain edit boxes, list boxes, push buttons, radio buttons and other controls designed to assist in the input of data to the application.

OK

Clicking or selecting this button in a dialog box, accepts the data displayed by the dialog box. This may be the default values or values typed/selected by the user.

CANCEL

Clicking or selecting this button in a dialog box, rejects any changes that might have been made by the user prior to selecting cancel.

DESCRIPTION

The description usually indicates whether a group (tagged) files or a single file whose name is displayed is to be operated on.

EDIT BOX

An edit box permits entry and editing of data using the backspace and arrow keys.

LIST BOX

A list box contains a list of items which can be selected and the list scrolled using scroll bars.

PUSH BUTTON

A push button is activated by clicking on the button, or selecting it and then depressing the <ENTER> key. The button gives the illusion of being depressed when the left mouse button is held down.

RADIO BUTTON

A radio button generally is used in groups. Each button in a group is exclusive to the other buttons in the group when selected. In CSS applications, radio buttons are raised diamond shaped symbols which have a black diamond in the center when it is selected.

ATTRIBUTE BYTE

The file attribute byte indicates the attributes of the file (Volume Label, Directory, Archive, Read Only, System, or Hidden). These bits can be in any combination, however only certain ones make sense.

ARCHIVE

The archive bit of the file attribute byte is set whenever a file has been updated by copying to it, or updating it in its normal usage. Usually, the archive bit is reset during a "backup" operation.

HIDDEN

The hidden bit of the file attribute byte indicates that the file will be hidden from view when doing a directory listing with the DOS command.

READ ONLY

The read only bit of the file attribute byte, when set, will permit reading of the file only. Any attempt to write to a file so flagged will result in an error message.

SYSTEM

When the system bit of the file attribute byte is set, the file is generally used by the system. IO.SYS is a file so flagged, for example.

BACKUP

Backup is the operation of archiving files to another location for safe keeping. This is usually accomplished by some software designed for the purpose (such as DOS's BACKUP command, or a tape archiving program), which reset the archive bit to indicate it has been archived.

MASK

A name used to match against the items in the list. This mask normally contains DOS wildcard characters (* and \$).

WILDCARDS

Symbols used by DOS to be replaced by the actual characters in a file name field.

PATH SPEC

The path spec (path specification) is the full DOS specification, identifying the location, including drive (optionally), and sub-directories of the file.

DOS

An acronym for Disk Operating System, i.e. MSDOS stands for MicroSoft Disk Operating Systems. Windows(tm) is a DOS of sorts, but still relies on the underlying DOS for most file operations.

SCROLLBAR

A bar that appears at the right side and/or bottom of some windows and in some dialog boxes. The scroll bar contains a scroll arrow at either end and a scroll box that moves within the scroll bar, reflecting your position in a file. Mouse users click the arrows or drag the scroll box to move forward or backward through the document or list. Keyboard users use the direction keys to accomplish the same thing.
