HI ALL !!!!!!!

As long I fought on that to although sometime hear information on possibility of unpacking closed by the password of archives of program Package for the Web (PFTW). Pass much time, I much thought and come to a conclusion that if program uses an algorithm Microsoft Cabinet, by means of the standard unpackage possible using to reveal an archive, avoiding secret algorithm of entering a password.
And here is hour has overpunched.
Happenned all so, as I and to foresee.
And so on the order.

First I has heard that by means of program CabManager 97a possible get files from the archive PFTW, absolutely herewith avoiding entering a password.
Is Necessary   the whole only say her that file .cab self-extractor and all is extracted without questions. All was well and even more, while I not faced with the problem.
Turns Out To Be CabManager 97a can extract files from the archive PFTW only provided that they does not to siting in subdirectories. Well but if files even so in the subdirectory inwardly, yes and else and not in one, extract their at all it is impossible.
No access to files.

Then I has thought and has decided that is necessary using to replace a file PFTW .exe in the format Microsoft Cabinet, good beside them similar method an packaging.
By means of the convertor I as not strange has done this. All pass much smoothly.
Hereinafter was necessary only unpacking than-that .cab archive.
And as not strange this has done extract.exe ask utility from the directory Windows\Command.
All pass without problems.
Trace patiences and all, along with all subdirectories unpacking from the archive.

WOW !!!!!!!!
IT'S GREAT !!!!!!!!!!!

So for instance I has got 100 % working version Demoshield 5.3.
Downloading only for authorized users passworded upgrade 5.3 - 5.3.005 , up by above described way files from the archive and has rewritten them in the directory, where has ed Demoshield.

And you is utilities and it possibility.

Ithaca one more minute of patiences.

As this works:

By means of the file exe2cab.exe you transform PFTW archive in .cab file.
Hereinafter by means of utilities extract.exe extract from .cab file all that be inwardly.
Examples - extract.exe /y /e demo.cab

Try, and you this like !!!!
