iView

Simply the easiest and fastest way to view and catalog pictures for the Mac.

If you have ever wanted an application that would keep track of all the pictures on your disk iView is for you. iView is primarily designed to catalog and playback image files. iView goes beyond the Mac's simple scrapbook utility and allows you to view and organize several types of images on all your disks. Some of the types currently supported include: JPEG, GIF, Single-layer Photoshop, Silicon Graphics and of course PICT files, clips, startup screens and if XTND is installed TIFF and EPS. iView displays images as a list of file names, list of thumbnails, variable sized image, or as a slide show. Images can then be cataloged, launched with the application that created them, printed in custom reports, saved as a QuickTime™ movie, copied to the clipboard, or dragged as clips to the finder or into Photoshop. Catalogs can be searched and saved on your hard disk. A catalog can contain real images from volumes that may not be mounted. iView will let you view the images and prompt you to insert the volume to retrieve an image.

iView makes extensive use of drag and drop which makes it easy to use and interface with the finder. In fact, everything about iView is designed to be simple, useful and intuitive. iView eliminates tedious repetitive work and increases your ability to get the job done. It makes image re-use and playback quick and easy, as it ensures individuals as well as publishers, designers, pre-press operators and multi-media programmers will never have to search through stacks of SyQuest back-ups for missing images ever again.

iView is a rapidly evolving application. Many changes are in store for this year. Please make sure you have the latest version. Count on iView to grow rapidly based on your input and our own cornucopia of ideas. We plan to make iView your favorite application by giving registered users every upgrade free and by fulfilling your every desire, even ones you didn't know you had!

iView goes beyond the simple Mac scrapbook in many ways.

• View by info (name, size and other user selectable and editable text), view by thumbnail, view by variably sized image, view in a slideshow.

- Maintain many catalogs of images without excessive use of hard disk space
- View a large variety of image formats (a growing list determined in part by QuickTime)
- View many images at a time up to 8000 in a catalog and an infinite number of catalogs.
- Search for particular images in a catalog using the filter box.
- Filter and mark many images at once to be acted on in various ways.
- Drag files, folders, floppy disks, hard disks, CD's on to the iView window or icon to locate and catalog all image files automatically.
- iView maintains the address on disk of a file and does not save the actual image file thus saving disk space and avoiding duplicating files.
- Choosing an image and choosing reveal folder will open the folder an image is in.
- Choosing an image and choosing launch application will open the image in the application that created it.

iView eliminates tedious repetitive work and increases your ability to get the job done. Stop trying to find and open images individually in applications that can't be found. iView them!
